RsCmwWlanMeas

Release 4.0.140.60

Rohde & Schwarz

Apr 17, 2024

CONTENTS:

CMW

CHAPTER

ONE

REVISION HISTORY

1.1 RsCmwWlanMeas

Rohde & Schwarz CMW WLAN Measurement RsCmwWlanMeas instrument driver.

Basic Hello-World code:

```
from RsCmwWlanMeas import *

instr = RsCmwWlanMeas('TCPIP::192.168.2.101::hislip0')
idn = instr.query('*IDN?')
print('Hello, I am: ' + idn)
```

Supported instruments: CMW500, CMW100

The package is hosted here: https://pypi.org/project/RsCmwWlanMeas/

Documentation: https://RsCmwWlanMeas.readthedocs.io/

Examples: https://github.com/Rohde-Schwarz/Examples/

1.1.1 Version history

Release Notes:

Latest release notes summary: Update for FW 4.0.140

Version 4.0.140

- Update for FW 4.0.140

Version 3.8.xx2

- Fixed several misspelled arguments and command headers

Version 3.8.xx1

- Bluetooth and WLAN update for FW versions 3.8.xxx

Version 3.7.xx8

- Added documentation on ReadTheDocs

Version 3.7.xx7

- Added 3G measurement subsystems RsCmwGsmMeas, RsCmwCdma2kMeas, RsCmwEvdoMeas, RsCmwWcdmaMeas
- Added new data types for commands accepting numbers or ON/OFF:
- int or bool
- float or bool

Version 3.7.xx6

- Added new UDF integer number recognition

Version 3.7.xx5

- Added RsCmwDau

Version 3.7.xx4

- Fixed several interface names
- New release for CMW Base 3.7.90
- New release for CMW Bluetooth 3.7.90

Version 3.7.xx3

- Second release of the CMW python drivers packet
- New core component RsInstrument
- Previously, the groups starting with CATalog: e.g. 'CATalog:SIGNaling:TOPology:PLMN' were reordered to 'SIGNaling:TOPology:PLMN:CATALOG' give more contextual meaning to the method/property name. This is now reverted back, since it was hard to find the desired functionality.
- Reorganized Utilities interface to sub-groups

Version 3.7.xx2

- Fixed some misspeling errors
- Changed enum and repCap types names
- All the assemblies are signed with Rohde & Schwarz signature

Version 1.0.0.0

- First released version

CHAPTER

TWO

GETTING STARTED

2.1 Introduction

RsCmwWlanMeas is a Python remote-control communication module for Rohde & Schwarz SCPI-based Test and Measurement Instruments. It represents SCPI commands as fixed APIs and hence provides SCPI autocompletion and helps you to avoid common string typing mistakes.

Basic example of the idea:
SCPI command:
`SYSTem:REFerence:FREQuency:SOURce`
Python module representation:
writing:
`driver.system.reference.frequency.source.set()`
reading:
`driver.system.reference.frequency.source.get()`

Check out this RsCmwBase example:

```
""" Example on how to use the python RsCmw auto-generated instrument driver showing:
- usage of basic properties of the cmw_base object
- basic concept of setting commands and repcaps: DISPlay:WINDow<n>:SELect
- cmw_xxx drivers reliability interface usage
"""

from RsCmwBase import *  # install from pypi.org

RsCmwBase.assert_minimum_version('3.7.90.38')
cmw_base = RsCmwBase('TCPIP::10.112.1.116::INSTR', True, False)
print(f'CMW Base IND: {cmw_base.utilities.idn_string}')
print(f'CMW Instrument options:\n{",".join(cmw_base.utilities.instrument_options)}')
cmw_base.utilities.visa_timeout = 5000

# Sends OPC after each command
cmw_base.utilities.opc_query_after_write = False
```

(continues on next page)

(continued from previous page)

```
# Checks for syst:err? after each command / query
cmw_base.utilities.instrument_status_checking = True

# DISPlay:WINDow<n>:SELect
cmw_base.display.window.select.set(repcap.Window.Win1)
cmw_base.display.window.repcap_window_set(repcap.Window.Win2)
cmw_base.display.window.select.set()

# Self-test
self_test = cmw_base.utilities.self_test()
print(f'CMW self-test result: {self_test} - {"Passed" if self_test[0] == 0 else "Failed"}
↪"')

# Driver's Interface reliability offers a convenient way of reacting on the return value␣
↪Reliability Indicator
cmw_base.reliability.ExceptionOnError = True

# Callback to use for the reliability indicator update event
def my_reliability_handler(event_args: ReliabilityEventArgs):
        print(f'Base Reliability updated.\nContext: {event_args.context}\nMessage:
↪{event_args.message}')

# We register a callback for each change in the reliability indicator
cmw_base.reliability.on_update_handler = my_reliability_handler

# You can obtain the last value of the returned reliability
print(f"\nReliability last value: {cmw_base.reliability.last_value}, context '{cmw_base.
↪reliability.last_context}', message: {cmw_base.reliability.last_message}")

# Reference Frequency Source
cmw_base.system.reference.frequency.set_source(enums.SourceIntExt.INTernal)

# Close the session
cmw_base.close()
```

Couple of reasons why to choose this module over plain SCPI approach:

- Type-safe API using typing module
- You can still use the plain SCPI communication
- You can select which VISA to use or even not use any VISA at all
- Initialization of a new session is straight-forward, no need to set any other properties
- Many useful features are already implemented - reset, self-test, opc-synchronization, error checking, option checking
- Binary data blocks transfer in both directions
- Transfer of arrays of numbers in binary or ASCII format
- File transfers in both directions
- Events generation in case of error, sent data, received data, chunk data (for big files transfer)

- Multithreading session locking - you can use multiple threads talking to one instrument at the same time
- Logging feature tailored for SCPI communication - different for binary and ascii data

2.2 Installation

RsCmwWlanMeas is hosted on pypi.org. You can install it with pip (for example, `pip.exe` for Windows), or if you are using Pycharm (and you should be :-) direct in the Pycharm `Packet Management GUI`.

Preconditions

- Installed VISA. You can skip this if you plan to use only socket LAN connection. Download the Rohde & Schwarz VISA for Windows, Linux, Mac OS from here

Option 1 - Installing with pip.exe under Windows

- Start the command console: `WinKey + R`, type `cmd` and hit ENTER
- Change the working directory to the Python installation of your choice (adjust the user name and python version in the path):

```
cd c:\Users\John\AppData\Local\Programs\Python\Python37\Scripts
```

- Install with the command: `pip install RsCmwWlanMeas`

Option 2 - Installing in Pycharm

- In Pycharm Menu `File->Settings->Project->Project Interpreter` click on the '+' button on the top left (the last PyCharm version)
- Type `RsCmwWlanMeas` in the search box
- If you are behind a Proxy server, configure it in the Menu: `File->Settings->Appearance->System Settings->HTTP Proxy`

For more information about Rohde & Schwarz instrument remote control, check out our Instrument_Remote_Control_Web_Series .

Option 3 - Offline Installation

If you are still reading the installation chapter, it is probably because the options above did not work for you - proxy problems, your boss saw the internet bill… Here are 6 step for installing the RsCmwWlanMeas offline:

- Download this python script (**Save target as**): rsinstrument_offline_install.py This installs all the preconditions that the RsCmwWlanMeas needs.
- Execute the script in your offline computer (supported is python 3.6 or newer)
- Download the RsCmwWlanMeas package to your computer from the pypi.org: https://pypi.org/project/RsCmwWlanMeas/#files to for example `c:\temp\`
- Start the command line `WinKey + R`, type `cmd` and hit ENTER
- Change the working directory to the Python installation of your choice (adjust the user name and python version in the path):

```
cd c:\Users\John\AppData\Local\Programs\Python\Python37\Scripts
```

- Install with the command: `pip install c:\temp\RsCmwWlanMeas-4.0.140.60.tar`

2.3 Finding Available Instruments

Like the pyvisa's ResourceManager, the RsCmwWlanMeas can search for available instruments:

```
"""
Find the instruments in your environment
"""

from RsCmwWlanMeas import *

# Use the instr_list string items as resource names in the RsCmwWlanMeas constructor
instr_list = RsCmwWlanMeas.list_resources("?*")
print(instr_list)
```

If you have more VISAs installed, the one actually used by default is defined by a secret widget called Visa Conflict Manager. You can force your program to use a VISA of your choice:

```
"""
Find the instruments in your environment with the defined VISA implementation
"""

from RsCmwWlanMeas import *

# In the optional parameter visa_select you can use for example 'rs' or 'ni'
# Rs Visa also finds any NRP-Zxx USB sensors
instr_list = RsCmwWlanMeas.list_resources('?*', 'rs')
print(instr_list)
```

Tip: We believe our R&S VISA is the best choice for our customers. Here are the reasons why:

- Small footprint
- Superior VXI-11 and HiSLIP performance
- Integrated legacy sensors NRP-Zxx support
- Additional VXI-11 and LXI devices search
- Availability for Windows, Linux, Mac OS

2.4 Initiating Instrument Session

RsCmwWlanMeas offers four different types of starting your remote-control session. We begin with the most typical case, and progress with more special ones.

Standard Session Initialization

Initiating new instrument session happens, when you instantiate the RsCmwWlanMeas object. Below, is a simple Hello World example. Different resource names are examples for different physical interfaces.

```
"""
Simple example on how to use the RsCmwWlanMeas module for remote-controlling your␣
↪instrument
Preconditions:

- Installed RsCmwWlanMeas Python module Version 4.0.140 or newer from pypi.org
- Installed VISA, for example R&S Visa 5.12 or newer
"""

from RsCmwWlanMeas import *

# A good practice is to assure that you have a certain minimum version installed
RsCmwWlanMeas.assert_minimum_version('4.0.140')
resource_string_1 = 'TCPIP::192.168.2.101::INSTR'  # Standard LAN connection (also␣
↪called VXI-11)
resource_string_2 = 'TCPIP::192.168.2.101::hislip0'  # Hi-Speed LAN connection - see␣
↪1MA208
resource_string_3 = 'GPIB::20::INSTR'  # GPIB Connection
resource_string_4 = 'USB::0x0AAD::0x0119::022019943::INSTR'  # USB-TMC (Test and␣
↪Measurement Class)

# Initializing the session
driver = RsCmwWlanMeas(resource_string_1)

idn = driver.utilities.query_str('*IDN?')
print(f"\nHello, I am: '{idn}'")
print(f'RsCmwWlanMeas package version: {driver.utilities.driver_version}')
print(f'Visa manufacturer: {driver.utilities.visa_manufacturer}')
print(f'Instrument full name: {driver.utilities.full_instrument_model_name}')
print(f'Instrument installed options: {",".join(driver.utilities.instrument_options)}')

# Close the session
driver.close()
```

Note: If you are wondering about the missing `ASRL1::INSTR`, yes, it works too, but come on… it's 2023.

Do not care about specialty of each session kind; RsCmwWlanMeas handles all the necessary session settings for you. You immediately have access to many identification properties in the interface `driver.utilities` . Here are same of them:

- `idn_string`

- driver_version
- visa_manufacturer
- full_instrument_model_name
- instrument_serial_number
- instrument_firmware_version
- instrument_options

The constructor also contains optional boolean arguments id_query and reset:

```
driver = RsCmwWlanMeas('TCPIP::192.168.56.101::hislip0', id_query=True, reset=True)
```

- Setting id_query to True (default is True) checks, whether your instrument can be used with the RsCmwWlanMeas module.
- Setting reset to True (default is False) resets your instrument. It is equivalent to calling the reset() method.

Selecting a Specific VISA

Just like in the function list_resources(), the RsCmwWlanMeas allows you to choose which VISA to use:

```
"""
Choosing VISA implementation
"""

from RsCmwWlanMeas import *

# Force use of the Rs Visa. For NI Visa, use the "SelectVisa='ni'"
driver = RsCmwWlanMeas('TCPIP::192.168.56.101::INSTR', True, True, "SelectVisa='rs'")

idn = driver.utilities.query_str('*IDN?')
print(f"\nHello, I am: '{idn}'")
print(f"\nI am using the VISA from: {driver.utilities.visa_manufacturer}")

# Close the session
driver.close()
```

No VISA Session

We recommend using VISA when possible preferrably with HiSlip session because of its low latency. However, if you are a strict VISA denier, RsCmwWlanMeas has something for you too - **no Visa installation raw LAN socket**:

```
"""
Using RsCmwWlanMeas without VISA for LAN Raw socket communication
"""

from RsCmwWlanMeas import *

driver = RsCmwWlanMeas('TCPIP::192.168.56.101::5025::SOCKET', True, True, "SelectVisa=
↪'socket'")
print(f'Visa manufacturer: {driver.utilities.visa_manufacturer}')
```

(continues on next page)

(continued from previous page)

```
print(f"\nHello, I am: '{driver.utilities.idn_string}'")

# Close the session
driver.close()
```

Warning: Not using VISA can cause problems by debugging when you want to use the communication Trace Tool. The good news is, you can easily switch to use VISA and back just by changing the constructor arguments. The rest of your code stays unchanged.

Simulating Session

If a colleague is currently occupying your instrument, leave him in peace, and open a simulating session:

```
driver = RsCmwWlanMeas('TCPIP::192.168.56.101::hislip0', True, True, "Simulate=True")
```

More `option_string` tokens are separated by comma:

```
driver = RsCmwWlanMeas('TCPIP::192.168.56.101::hislip0', True, True, "SelectVisa='rs',␣
↪Simulate=True")
```

Shared Session

In some scenarios, you want to have two independent objects talking to the same instrument. Rather than opening a second VISA connection, share the same one between two or more RsCmwWlanMeas objects:

```
"""
Sharing the same physical VISA session by two different RsCmwWlanMeas objects
"""

from RsCmwWlanMeas import *

driver1 = RsCmwWlanMeas('TCPIP::192.168.56.101::INSTR', True, True)
driver2 = RsCmwWlanMeas.from_existing_session(driver1)

print(f'driver1: {driver1.utilities.idn_string}')
print(f'driver2: {driver2.utilities.idn_string}')

# Closing the driver2 session does not close the driver1 session - driver1 is the
↪'session master'
driver2.close()
print(f'driver2: I am closed now')

print(f'driver1: I am  still opened and working: {driver1.utilities.idn_string}')
driver1.close()
print(f'driver1: Only now I am closed.')
```

Note: The `driver1` is the object holding the 'master' session. If you call the `driver1.close()`, the `driver2` loses its instrument session as well, and becomes pretty much useless.

2.5 Plain SCPI Communication

After you have opened the session, you can use the instrument-specific part described in the RsCmwWlanMeas API Structure. If for any reason you want to use the plain SCPI, use the `utilities` interface's two basic methods:

- `write_str()` - writing a command without an answer, for example ***RST**
- `query_str()` - querying your instrument, for example the ***IDN?** query

You may ask a question. Actually, two questions:

- **Q1**: Why there are not called `write()` and `query()` ?
- **Q2**: Where is the `read()` ?

Answer 1: Actually, there are - the `write_str()` / `write()` and `query_str()` / `query()` are aliases, and you can use any of them. We promote the `_str` names, to clearly show you want to work with strings. Strings in Python3 are Unicode, the *bytes* and *string* objects are not interchangeable, since one character might be represented by more than 1 byte. To avoid mixing string and binary communication, all the method names for binary transfer contain `_bin` in the name.

Answer 2: Short answer - you do not need it. Long answer - your instrument never sends unsolicited responses. If you send a set command, you use `write_str()`. For a query command, you use `query_str()`. So, you really do not need it...

Bottom line - if you are used to `write()` and `query()` methods, from pyvisa, the `write_str()` and `query_str()` are their equivalents.

Enough with the theory, let us look at an example. Simple write, and query:

```
"""
Basic string write_str / query_str
"""

from RsCmwWlanMeas import *

driver = RsCmwWlanMeas('TCPIP::192.168.56.101::INSTR')
driver.utilities.write_str('*RST')
response = driver.utilities.query_str('*IDN?')
print(response)

# Close the session
driver.close()
```

This example is so-called "*University-Professor-Example*" - good to show a principle, but never used in praxis. The abovementioned commands are already a part of the driver's API. Here is another example, achieving the same goal:

```
"""
Basic string write_str / query_str
"""

from RsCmwWlanMeas import *

driver = RsCmwWlanMeas('TCPIP::192.168.56.101::INSTR')
driver.utilities.reset()
print(driver.utilities.idn_string)
```

(continues on next page)

(continued from previous page)

```
# Close the session
driver.close()
```

One additional feature we need to mention here: **VISA timeout**. To simplify, VISA timeout plays a role in each `query_xxx()`, where the controller (your PC) has to prevent waiting forever for an answer from your instrument. VISA timeout defines that maximum waiting time. You can set/read it with the `visa_timeout` property:

```
# Timeout in milliseconds
driver.utilities.visa_timeout = 3000
```

After this time, the RsCmwWlanMeas raises an exception. Speaking of exceptions, an important feature of the RsCmwWlanMeas is **Instrument Status Checking**. Check out the next chapter that describes the error checking in details.

For completion, we mention other string-based `write_xxx()` and `query_xxx()` methods - all in one example. They are convenient extensions providing type-safe float/boolean/integer setting/querying features:

```
"""
Basic string write_xxx / query_xxx
"""

from RsCmwWlanMeas import *

driver = RsCmwWlanMeas('TCPIP::192.168.56.101::INSTR')
driver.utilities.visa_timeout = 5000
driver.utilities.instrument_status_checking = True
driver.utilities.write_int('SWEEP:COUNT ', 10)  # sending 'SWEEP:COUNT 10'
driver.utilities.write_bool('SOURCE:RF:OUTPUT:STATE ', True)  # sending
↪'SOURCE:RF:OUTPUT:STATE ON'
driver.utilities.write_float('SOURCE:RF:FREQUENCY ', 1E9)  # sending 'SOURCE:RF:FREQUENCY␣
↪1000000000'

sc = driver.utilities.query_int('SWEEP:COUNT?')  # returning integer number sc=10
out = driver.utilities.query_bool('SOURCE:RF:OUTPUT:STATE?')  # returning boolean␣
↪out=True
freq = driver.utilities.query_float('SOURCE:RF:FREQUENCY?')  # returning float number␣
↪freq=1E9

# Close the session
driver.close()
```

Lastly, a method providing basic synchronization: `query_opc()`. It sends query ***OPC?** to your instrument. The instrument waits with the answer until all the tasks it currently has in a queue are finished. This way your program waits too, and this way it is synchronized with the actions in the instrument. Remember to have the VISA timeout set to an appropriate value to prevent the timeout exception. Here's the snippet:

```
driver.utilities.visa_timeout = 3000
driver.utilities.write_str("INIT")
driver.utilities.query_opc()

# The results are ready now to fetch
results = driver.utilities.query_str("FETCH:MEASUREMENT?")
```

Tip: Wait, there's more: you can send the ***OPC?** after each `write_xxx()` automatically:

```
# Default value after init is False
driver.utilities.opc_query_after_write = True
```

2.6 Error Checking

RsCmwWlanMeas pushes limits even further (internal R&S joke): It has a built-in mechanism that after each command/query checks the instrument's status subsystem, and raises an exception if it detects an error. For those who are already screaming: **Speed Performance Penalty!!!**, don't worry, you can disable it.

Instrument status checking is very useful since in case your command/query caused an error, you are immediately informed about it. Status checking has in most cases no practical effect on the speed performance of your program. However, if for example, you do many repetitions of short write/query sequences, it might make a difference to switch it off:

```
# Default value after init is True
driver.utilities.instrument_status_checking = False
```

To clear the instrument status subsystem of all errors, call this method:

```
driver.utilities.clear_status()
```

Instrument's status system error queue is clear-on-read. It means, if you query its content, you clear it at the same time. To query and clear list of all the current errors, use this snippet:

```
errors_list = driver.utilities.query_all_errors()
```

See the next chapter on how to react on errors.

2.7 Exception Handling

The base class for all the exceptions raised by the RsCmwWlanMeas is `RsInstrException`. Inherited exception classes:

- `ResourceError` raised in the constructor by problems with initiating the instrument, for example wrong or non-existing resource name
- `StatusException` raised if a command or a query generated error in the instrument's error queue
- `TimeoutException` raised if a visa timeout or an opc timeout is reached

In this example we show usage of all of them. Because it is difficult to generate an error using the instrument-specific SCPI API, we use plain SCPI commands:

```
"""
Showing how to deal with exceptions
"""

from RsCmwWlanMeas import *

```

(continues on next page)

(continued from previous page)

```
driver = None
# Try-catch for initialization. If an error occures, the ResourceError is raised
try:
    driver = RsCmwWlanMeas('TCPIP::10.112.1.179::hislip0')
except ResourceError as e:
    print(e.args[0])
    print('Your instrument is probably OFF...')
    # Exit now, no point of continuing
    exit(1)

# Dealing with commands that potentially generate errors OPTION 1:
# Switching the status checking OFF termporarily
driver.utilities.instrument_status_checking = False
driver.utilities.write_str('MY:MISSpelled:COMMand')
# Clear the error queue
driver.utilities.clear_status()
# Status checking ON again
driver.utilities.instrument_status_checking = True

# Dealing with queries that potentially generate errors OPTION 2:
try:
    # You migh want to reduce the VISA timeout to avoid long waiting
    driver.utilities.visa_timeout = 1000
    driver.utilities.query_str('MY:WRONg:QUERy?')

except StatusException as e:
    # Instrument status error
    print(e.args[0])
    print('Nothing to see here, moving on...')

except TimeoutException as e:
    # Timeout error
    print(e.args[0])
    print('That took a long time...')

except RsInstrException as e:
    # RsInstrException is a base class for all the RsCmwWlanMeas exceptions
    print(e.args[0])
    print('Some other RsCmwWlanMeas error...')

finally:
    driver.utilities.visa_timeout = 5000
    # Close the session in any case
    driver.close()
```

Tip: General rules for exception handling:

- If you are sending commands that might generate errors in the instrument, for example deleting a file which does not exist, use the **OPTION 1** - temporarily disable status checking, send the command, clear the error queue and enable the status checking again.
- If you are sending queries that might generate errors or timeouts, for example querying measurement that can not be performed at the moment, use the **OPTION 2** - try/except with optionally adjusting the timeouts.

2.8 Transferring Files

Instrument -> PC

You definitely experienced it: you just did a perfect measurement, saved the results as a screenshot to an instrument's storage drive. Now you want to transfer it to your PC. With RsCmwWlanMeas, no problem, just figure out where the screenshot was stored on the instrument. In our case, it is */var/user/instr_screenshot.png*:

```
driver.utilities.read_file_from_instrument_to_pc(
    r'/var/user/instr_screenshot.png',
    r'c:\temp\pc_screenshot.png')
```

PC -> Instrument

Another common scenario: Your cool test program contains a setup file you want to transfer to your instrument: Here is the RsCmwWlanMeas one-liner split into 3 lines:

```
driver.utilities.send_file_from_pc_to_instrument(
    r'c:\MyCoolTestProgram\instr_setup.sav',
    r'/var/appdata/instr_setup.sav')
```

2.9 Writing Binary Data

Writing from bytes

An example where you need to send binary data is a waveform file of a vector signal generator. First, you compose your wform_data as `bytes`, and then you send it with `write_bin_block()`:

```
# MyWaveform.wv is an instrument file name under which this data is stored
driver.utilities.write_bin_block(
    "SOUR:BB:ARB:WAV:DATA 'MyWaveform.wv',",
    wform_data)
```

Note: Notice the `write_bin_block()` has two parameters:

- `string` parameter `cmd` for the SCPI command
- `bytes` parameter `payload` for the actual binary data to send

Writing from PC files

Similar to querying binary data to a file, you can write binary data from a file. The second parameter is then the PC file path the content of which you want to send:

```
driver.utilities.write_bin_block_from_file(
    "SOUR:BB:ARB:WAV:DATA 'MyWaveform.wv',",
    r"c:\temp\wform_data.wv")
```

2.10 Transferring Big Data with Progress

We can agree that it can be annoying using an application that shows no progress for long-lasting operations. The same is true for remote-control programs. Luckily, the RsCmwWlanMeas has this covered. And, this feature is quite universal - not just for big files transfer, but for any data in both directions.

RsCmwWlanMeas allows you to register a function (programmers fancy name is `callback`), which is then periodicaly invoked after transfer of one data chunk. You can define that chunk size, which gives you control over the callback invoke frequency. You can even slow down the transfer speed, if you want to process the data as they arrive (direction instrument -> PC).

To show this in praxis, we are going to use another *University-Professor-Example*: querying the ***IDN?** with chunk size of 2 bytes and delay of 200ms between each chunk read:

```
"""
Event handlers by reading
"""

from RsCmwWlanMeas import *
import time

def my_transfer_handler(args):
    """Function called each time a chunk of data is transferred"""
    # Total size is not always known at the beginning of the transfer
    total_size = args.total_size if args.total_size is not None else "unknown"

    print(f"Context: '{args.context}{'with opc' if args.opc_sync else ''}', "
        f"chunk {args.chunk_ix}, "
        f"transferred {args.transferred_size} bytes, "
        f"total size {total_size}, "
        f"direction {'reading' if args.reading else 'writing'}, "
        f"data '{args.data}'")

    if args.end_of_transfer:
        print('End of Transfer')
    time.sleep(0.2)

driver = RsCmwWlanMeas('TCPIP::192.168.56.101::INSTR')

driver.events.on_read_handler = my_transfer_handler
# Switch on the data to be included in the event arguments
```

(continues on next page)

(continued from previous page)

```
# The event arguments args.data will be updated
driver.events.io_events_include_data = True
# Set data chunk size to 2 bytes
driver.utilities.data_chunk_size = 2
driver.utilities.query_str('*IDN?')
# Unregister the event handler
driver.utilities.on_read_handler = None

# Close the session
driver.close()
```

If you start it, you might wonder (or maybe not): why is the `args.total_size = None`? The reason is, in this particular case the RsCmwWlanMeas does not know the size of the complete response up-front. However, if you use the same mechanism for transfer of a known data size (for example, file transfer), you get the information about the total size too, and hence you can calculate the progress as:

*progress [pct] = 100 * args.transferred_size / args.total_size*

Snippet of transferring file from PC to instrument, the rest of the code is the same as in the previous example:

```
driver.events.on_write_handler = my_transfer_handler
driver.events.io_events_include_data = True
driver.data_chunk_size = 1000
driver.utilities.send_file_from_pc_to_instrument(
    r'c:\MyCoolTestProgram\my_big_file.bin',
    r'/var/user/my_big_file.bin')
# Unregister the event handler
driver.events.on_write_handler = None
```

2.11 Multithreading

You are at the party, many people talking over each other. Not every person can deal with such crosstalk, neither can measurement instruments. For this reason, RsCmwWlanMeas has a feature of scheduling the access to your instrument by using so-called **Locks**. Locks make sure that there can be just one client at a time *talking* to your instrument. Talking in this context means completing one communication step - one command write or write/read or write/read/error check.

To describe how it works, and where it matters, we take three typical mulithread scenarios:

One instrument session, accessed from multiple threads

You are all set - the lock is a part of your instrument session. Check out the following example - it will execute properly, although the instrument gets 10 queries at the same time:

```
"""
Multiple threads are accessing one RsCmwWlanMeas object
"""

import threading
from RsCmwWlanMeas import *
```

(continues on next page)

(continued from previous page)

```
def execute(session):
    """Executed in a separate thread."""
    session.utilities.query_str('*IDN?')

driver = RsCmwWlanMeas('TCPIP::192.168.56.101::INSTR')
threads = []
for i in range(10):
    t = threading.Thread(target=execute, args=(driver, ))
    t.start()
    threads.append(t)
print('All threads started')

# Wait for all threads to join this main thread
for t in threads:
    t.join()
print('All threads ended')

driver.close()
```

Shared instrument session, accessed from multiple threads

Same as the previous case, you are all set. The session carries the lock with it. You have two objects, talking to the same instrument from multiple threads. Since the instrument session is shared, the same lock applies to both objects causing the exclusive access to the instrument.

Try the following example:

```
"""
Multiple threads are accessing two RsCmwWlanMeas objects with shared session
"""

import threading
from RsCmwWlanMeas import *

def execute(session: RsCmwWlanMeas, session_ix, index) -> None:
    """Executed in a separate thread."""
    print(f'{index} session {session_ix} query start...')
    session.utilities.query_str('*IDN?')
    print(f'{index} session {session_ix} query end')

driver1 = RsCmwWlanMeas('TCPIP::192.168.56.101::INSTR')
driver2 = RsCmwWlanMeas.from_existing_session(driver1)
driver1.utilities.visa_timeout = 200
driver2.utilities.visa_timeout = 200
# To see the effect of crosstalk, uncomment this line
# driver2.utilities.clear_lock()

threads = []
```

(continues on next page)

(continued from previous page)

```
for i in range(10):
    t = threading.Thread(target=execute, args=(driver1, 1, i,))
    t.start()
    threads.append(t)
    t = threading.Thread(target=execute, args=(driver2, 2, i,))
    t.start()
    threads.append(t)
print('All threads started')

# Wait for all threads to join this main thread
for t in threads:
    t.join()
print('All threads ended')

driver2.close()
driver1.close()
```

As you see, everything works fine. If you want to simulate some party crosstalk, uncomment the line `driver2.utilities.clear_lock()`. Thich causes the driver2 session lock to break away from the driver1 session lock. Although the driver1 still tries to schedule its instrument access, the driver2 tries to do the same at the same time, which leads to all the fun stuff happening.

Multiple instrument sessions accessed from multiple threads

Here, there are two possible scenarios depending on the instrument's VISA interface:

- Your are lucky, because you instrument handles each remote session completely separately. An example of such instrument is SMW200A. In this case, you have no need for session locking.
- Your instrument handles all sessions with one set of in/out buffers. You need to lock the session for the duration of a talk. And you are lucky again, because the RsCmwWlanMeas takes care of it for you. The text below describes this scenario.

Run the following example:

```
"""
Multiple threads are accessing two RsCmwWlanMeas objects with two separate sessions
"""

import threading
from RsCmwWlanMeas import *

def execute(session: RsCmwWlanMeas, session_ix, index) -> None:
    """Executed in a separate thread."""
    print(f'{index} session {session_ix} query start...')
    session.utilities.query_str('*IDN?')
    print(f'{index} session {session_ix} query end')

driver1 = RsCmwWlanMeas('TCPIP::192.168.56.101::INSTR')
driver2 = RsCmwWlanMeas('TCPIP::192.168.56.101::INSTR')
driver1.utilities.visa_timeout = 200
```

(continues on next page)

(continued from previous page)

```
driver2.utilities.visa_timeout = 200

# Synchronise the sessions by sharing the same lock
driver2.utilities.assign_lock(driver1.utilities.get_lock())  # To see the effect of␣
↪crosstalk, comment this line

threads = []
for i in range(10):
    t = threading.Thread(target=execute, args=(driver1, 1, i,))
    t.start()
    threads.append(t)
    t = threading.Thread(target=execute, args=(driver2, 2, i,))
    t.start()
    threads.append(t)
print('All threads started')

# Wait for all threads to join this main thread
for t in threads:
    t.join()
print('All threads ended')

driver2.close()
driver1.close()
```

You have two completely independent sessions that want to talk to the same instrument at the same time. This will not go well, unless they share the same session lock. The key command to achieve this is `driver2.utilities.assign_lock(driver1.utilities.get_lock())` Try to comment it and see how it goes. If despite commenting the line the example runs without issues, you are lucky to have an instrument similar to the SMW200A.

2.12 Logging

Yes, the logging again. This one is tailored for instrument communication. You will appreciate such handy feature when you troubleshoot your program, or just want to protocol the SCPI communication for your test reports.

What can you actually do with the logger?

- Write SCPI communication to a stream-like object, for example console or file, or both simultaneously
- Log only errors and skip problem-free parts; this way you avoid going through thousands lines of texts
- Investigate duration of certain operations to optimize your program's performance
- Log custom messages from your program

Let us take this basic example:

```
"""
Basic logging example to the console
"""

from RsCmwWlanMeas import *

driver = RsCmwWlanMeas('TCPIP::192.168.1.101::INSTR')
```

(continues on next page)

(continued from previous page)

```
# Switch ON logging to the console.
driver.utilities.logger.log_to_console = True
driver.utilities.logger.mode = LoggingMode.On
driver.utilities.reset()

# Close the session
driver.close()
```

Console output:

```
10:29:10.819     TCPIP::192.168.1.101::INSTR     0.976 ms  Write: *RST
10:29:10.819     TCPIP::192.168.1.101::INSTR  1884.985 ms  Status check: OK
10:29:12.704     TCPIP::192.168.1.101::INSTR     0.983 ms  Query OPC: 1
10:29:12.705     TCPIP::192.168.1.101::INSTR     2.892 ms  Clear status: OK
10:29:12.708     TCPIP::192.168.1.101::INSTR     3.905 ms  Status check: OK
10:29:12.712     TCPIP::192.168.1.101::INSTR     1.952 ms  Close: Closing session
```

The columns of the log are aligned for better reading. Columns meaning:

- (1) Start time of the operation
- (2) Device resource name (you can set an alias)
- (3) Duration of the operation
- (4) Log entry

Tip: You can customize the logging format with `set_format_string()`, and set the maximum log entry length with the properties:

- `abbreviated_max_len_ascii`
- `abbreviated_max_len_bin`
- `abbreviated_max_len_list`

See the full logger help *here*.

Notice the SCPI communication starts from the line `driver.utilities.reset()`. If you want to log the initialization of the session as well, you have to switch the logging ON already in the constructor:

```
driver = RsCmwWlanMeas('TCPIP::192.168.56.101::hislip0', options='LoggingMode=On')
```

Parallel to the console logging, you can log to a general stream. Do not fear the programmer's jargon'... under the term **stream** you can just imagine a file. To be a little more technical, a stream in Python is any object that has two methods: `write()` and `flush()`. This example opens a file and sets it as logging target:

```
"""
Example of logging to a file
"""

from RsCmwWlanMeas import *

driver = RsCmwWlanMeas('TCPIP::192.168.1.101::INSTR')
```

(continues on next page)

(continued from previous page)

```
# We also want to log to the console.
driver.utilities.logger.log_to_console = True

# Logging target is our file
file = open(r'c:\temp\my_file.txt', 'w')
driver.utilities.logger.set_logging_target(file)
driver.utilities.logger.mode = LoggingMode.On

# Instead of the 'TCPIP::192.168.1.101::INSTR', show 'MyDevice'
driver.utilities.logger.device_name = 'MyDevice'

# Custom user entry
driver.utilities.logger.info_raw('----- This is my custom log entry. ---- ')

driver.utilities.reset()

# Close the session
driver.close()

# Close the log file
file.close()
```

Tip: To make the log more compact, you can skip all the lines with `Status check: OK`:

```
driver.utilities.logger.log_status_check_ok = False
```

Hint: You can share the logging file between multiple sessions. In such case, remember to close the file only after you have stopped logging in all your sessions, otherwise you get a log write error.

For logging to a UDP port in addition to other log targets, use one of the lines:

```
driver.utilities.logger.log_to_udp = True
driver.utilities.logger.log_to_console_and_udp = True
```

You can select the UDP port to log to, the default is 49200:

```
driver.utilities.logger.udp_port = 49200
```

Another cool feature is logging only errors. To make this mode usefull for troubleshooting, you also want to see the circumstances which lead to the errors. Each driver elementary operation, for example, `write_str()`, can generate a group of log entries - let us call them **Segment**. In the logging mode `Errors`, a whole segment is logged only if at least one entry of the segment is an error.

The script below demonstrates this feature. We use a direct SCPI communication to send a misspelled SCPI command *CLS, which leads to instrument status error:

```
"""
Logging example to the console with only errors logged
"""
```

(continues on next page)

(continued from previous page)

```
from RsCmwWlanMeas import *

driver = RsCmwWlanMeas('TCPIP::192.168.1.101::INSTR', options='LoggingMode=Errors')

# Switch ON logging to the console.
driver.utilities.logger.log_to_console = True

# Reset will not be logged, since no error occurred there
driver.utilities.reset()

# Now a misspelled command.
driver.utilities.write('*CLaS')

# A good command again, no logging here
idn = driver.utilities.query('*IDN?')

# Close the session
driver.close()
```

Console output:

```
12:11:02.879 TCPIP::192.168.1.101::INSTR     0.976 ms  Write string: *CLaS
12:11:02.879 TCPIP::192.168.1.101::INSTR     6.833 ms  Status check: StatusException:
                                                       Instrument error detected: Undefined header;
↪*CLaS
```

Notice the following:

- Although the operation **Write string: *CLaS** finished without an error, it is still logged, because it provides the context for the actual error which occurred during the status checking right after.
- No other log entries are present, including the session initialization and close, because they were all error-free.

CHAPTER

THREE

ENUMS

3.1 Bandwidth

```
# Example value:
value = enums.Bandwidth.BW05mhz
# All values (8x):
BW05mhz | BW10mhz | BW16mhz | BW20mhz | BW32mhz | BW40mhz | BW80mhz | BW88mhz
```

3.2 BurstEvalLength

```
# Example value:
value = enums.BurstEvalLength.REDucedburst
# All values (2x):
REDucedburst | WHOLeburst
```

3.3 BurstType

```
# Example value:
value = enums.BurstType.AUTO
# All values (4x):
AUTO | DLIN | GREenfield | MIXed
```

3.4 BurstTypeB

```
# Example value:
value = enums.BurstTypeB.GREenfield
# All values (2x):
GREenfield | MIXed
```

3.5 CfoEstimation

```
# Example value:
value = enums.CfoEstimation.FULLpacket
# All values (2x):
FULLpacket | PREamble
```

3.6 ChannelEstimation

```
# Example value:
value = enums.ChannelEstimation.PAYLoad
# All values (2x):
PAYLoad | PREamble
```

3.7 Coderate

```
# Example value:
value = enums.Coderate.AUTO
# All values (7x):
AUTO | CR12 | CR14dcm | CR23 | CR34 | CR38dcm | CR56
```

3.8 CodingType

```
# Example value:
value = enums.CodingType.BCC
# All values (2x):
BCC | LDPC
```

3.9 ConnectorSwitch

```
# First value:
value = enums.ConnectorSwitch.R11
# Last value:
value = enums.ConnectorSwitch.RH8
# All values (96x):
R11 | R12 | R13 | R14 | R15 | R16 | R17 | R18
R21 | R22 | R23 | R24 | R25 | R26 | R27 | R28
R31 | R32 | R33 | R34 | R35 | R36 | R37 | R38
R41 | R42 | R43 | R44 | R45 | R46 | R47 | R48
RA1 | RA2 | RA3 | RA4 | RA5 | RA6 | RA7 | RA8

RC1 | RC2 | RC3 | RC4 | RC5 | RC6 | RC7 | RC8
RD1 | RD2 | RD3 | RD4 | RD5 | RD6 | RD7 | RD8
```

(continues on next page)

(continued from previous page)

```
RE1 | RE2 | RE3 | RE4 | RE5 | RE6 | RE7 | RE8
RF1 | RF2 | RF3 | RF4 | RF5 | RF6 | RF7 | RF8
RG1 | RG2 | RG3 | RG4 | RG5 | RG6 | RG7 | RG8
RH1 | RH2 | RH3 | RH4 | RH5 | RH6 | RH7 | RH8
```

3.10 ConnectorSwitchExt

```
# First value:
value = enums.ConnectorSwitchExt.OFF
# Last value:
value = enums.ConnectorSwitchExt.RH8
# All values (98x):
OFF | ON | R11 | R12 | R13 | R14 | R15 | R16
R17 | R18 | R21 | R22 | R23 | R24 | R25 | R26
R27 | R28 | R31 | R32 | R33 | R34 | R35 | R36
R37 | R38 | R41 | R42 | R43 | R44 | R45 | R46
R47 | R48 | RA1 | RA2 | RA3 | RA4 | RA5 | RA6
RA7 | RA8 | RB1 | RB2 | RB3 | RB4 | RB5 | RB6
RB7 | RB8 | RC1 | RC2 | RC3 | RC4 | RC5 | RC6
RC7 | RC8 | RD1 | RD2 | RD3 | RD4 | RD5 | RD6
RD7 | RD8 | RE1 | RE2 | RE3 | RE4 | RE5 | RE6
RE7 | RE8 | RF1 | RF2 | RF3 | RF4 | RF5 | RF6
RF7 | RF8 | RG1 | RG2 | RG3 | RG4 | RG5 | RG6
RG7 | RG8 | RH1 | RH2 | RH3 | RH4 | RH5 | RH6
RH7 | RH8
```

3.11 ConnectorTuple

```
# Example value:
value = enums.ConnectorTuple.CT12
# All values (7x):
CT12 | CT14 | CT18 | CT34 | CT56 | CT58 | CT78
```

3.12 DecodeStatus

```
# Example value:
value = enums.DecodeStatus.INV
# All values (3x):
INV | NAV | OK
```

3.13 DisplayMode

```
# Example value:
value = enums.DisplayMode.ABSolute
# All values (2x):
ABSolute | RELative
```

3.14 EvmMethod

```
# Example value:
value = enums.EvmMethod.ST1999
# All values (3x):
ST1999 | ST2007 | ST2016
```

3.15 FftOffset

```
# Example value:
value = enums.FftOffset.AUTO
# All values (3x):
AUTO | CENT | PEAK
```

3.16 FrequencyBand

```
# Example value:
value = enums.FrequencyBand.B24Ghz
# All values (4x):
B24Ghz | B4GHz | B5GHz | B6GHz
```

3.17 GuardInterval

```
# Example value:
value = enums.GuardInterval.GI08
# All values (5x):
GI08 | GI16 | GI32 | LONG | SHORt
```

3.18 GuiScenario

```
# Example value:
value = enums.GuiScenario.CSPath
# All values (8x):
CSPath | MIMO2x2 | MIMO4x4 | MIMO8x8 | SALone | SMI4 | TMIMo | UNDefined
```

3.19 IeeeStandard

```
# Example value:
value = enums.IeeeStandard.DSSS
# All values (7x):
DSSS | EHTofdm | HEOFdm | HTOFdm | LOFDm | POFDm | VHTofdm
```

3.20 LowHigh

```
# Example value:
value = enums.LowHigh.HIGH
# All values (2x):
HIGH | LOW
```

3.21 LtfSize

```
# Example value:
value = enums.LtfSize.LTF1
# All values (3x):
LTF1 | LTF2 | LTF4
```

3.22 MimoScenario

```
# First value:
value = enums.MimoScenario.CSPath
# Last value:
value = enums.MimoScenario.UNDefined
# All values (10x):
CSPath | MIMO2x2 | MIMO4x4 | MIMO8x8 | SALone | SMI4 | TMIM2x2 | TMIM3x3
TMIM4x4 | UNDefined
```

3.23 ModulationFilter

```
# First value:
value = enums.ModulationFilter.ALL
# Last value:
value = enums.ModulationFilter.QPSK
# All values (11x):
ALL | BPSK | CCK11 | CCK5_5 | DBPSk | DQPSk | QAM1024 | QAM16
QAM256 | QAM64 | QPSK
```

3.24 ModulationTypeB

```
# First value:
value = enums.ModulationTypeB.BP1_5
# Last value:
value = enums.ModulationTypeB.QR34
# All values (32x):
BP1_5 | BP2_25 | BP3 | BP4_5 | BPM6 | BPM9 | BR12 | Q1M12
Q1M18 | Q1M24 | Q1M36 | Q1M6 | Q1M9 | Q1R12 | Q1R34 | Q6M12
Q6M135 | Q6M24 | Q6M27 | Q6M48 | Q6M54 | Q6R23 | Q6R34 | Q6R56
QM12 | QM18 | QM3 | QM4_5 | QM6 | QM9 | QR12 | QR34
```

3.25 ModulationTypeC

```
# Example value:
value = enums.ModulationTypeC.CCK11
# All values (4x):
CCK11 | CCK5 | DBPSk1 | DQPSk2
```

3.26 ModulationTypeD

```
# First value:
value = enums.ModulationTypeD._16Q
# Last value:
value = enums.ModulationTypeD.UNSPecified
# All values (28x):
_16Q | _16Q12 | _16Q14 | _16Q34 | _16Q38 | _1KQ | _1KQ34 | _1KQ56
_256Q | _256Q34 | _256Q56 | _4KQ | _4KQ34 | _4KQ56 | _64Q | _64Q12
_64Q23 | _64Q34 | _64Q56 | BPSK | BPSK12 | BPSK14 | BPSK34 | QPSK
QPSK12 | QPSK14 | QPSK34 | UNSPecified
```

3.27 ParameterSetMode

```
# Example value:
value = enums.ParameterSetMode.GLOBal
# All values (2x):
GLOBal | LIST
```

3.28 PlcpType

```
# Example value:
value = enums.PlcpType.LONGplcp
# All values (2x):
LONGplcp | SHORtplcp
```

3.29 PowerClass

```
# Example value:
value = enums.PowerClass.CLA
# All values (4x):
CLA | CLB | CLCD | USERdefined
```

3.30 ReceiveMode

```
# Example value:
value = enums.ReceiveMode.CMIMo
# All values (4x):
CMIMo | SISO | SMIMo | TMIMo
```

3.31 RefPower

```
# Example value:
value = enums.RefPower.MAXimum
# All values (2x):
MAXimum | MEAN
```

3.32 Repeat

```
# Example value:
value = enums.Repeat.CONTinuous
# All values (2x):
CONTinuous | SINGleshot
```

3.33 ResourceState

```
# Example value:
value = enums.ResourceState.ACTive
# All values (8x):
ACTive | ADJusted | INValid | OFF | PENDing | QUEued | RDY | RUN
```

3.34 ResultStatus2

```
# First value:
value = enums.ResultStatus2.DC
# Last value:
value = enums.ResultStatus2.ULEU
# All values (10x):
DC | INV | NAV | NCAP | OFF | OFL | OK | UFL
ULEL | ULEU
```

3.35 RxConnector

```
# First value:
value = enums.RxConnector.I11I
# Last value:
value = enums.RxConnector.RH8
# All values (163x):
I11I | I13I | I15I | I17I | I21I | I23I | I25I | I27I

```

CHAPTER

SIX

RSCMWWLANMEAS API STRUCTURE

Global RepCaps

```
driver = RsCmwWlanMeas('TCPIP::192.168.2.101::hislip0')
# Instance range: Inst1 .. Inst32
rc = driver.repcap_instance_get()
driver.repcap_instance_set(repcap.Instance.Inst1)
```

class RsCmwWlanMeas(*resource_name: str*, *id_query: bool = True*, *reset: bool = False*, *options: str = None*, *direct_session: object = None*)

1253 total commands, 5 Subgroups, 0 group commands

Initializes new RsCmwWlanMeas session.

Parameter options tokens examples:

- `Simulate=True` - starts the session in simulation mode. Default: `False`
- `SelectVisa=socket` - uses no VISA implementation for socket connections - you do not need any VISA-C installation
- `SelectVisa=rs` - forces usage of RohdeSchwarz Visa
- `SelectVisa=ivi` - forces usage of National Instruments Visa
- `QueryInstrumentStatus = False` - same as `driver.utilities.instrument_status_checking = False`. Default: `True`
- `WriteDelay = 20, ReadDelay = 5` - Introduces delay of 20ms before each write and 5ms before each read. Default: `0ms` for both
- `OpcWaitMode = OpcQuery` - mode for all the opc-synchronised write/reads. Other modes: StbPolling, StbPollingSlow, StbPollingSuperSlow. Default: `StbPolling`
- `AddTermCharToWriteBinBLock = True` - Adds one additional LF to the end of the binary data (some instruments require that). Default: `False`
- `AssureWriteWithTermChar = True` - Makes sure each command/query is terminated with termination character. Default: Interface dependent
- `TerminationCharacter = "\r"` - Sets the termination character for reading. Default: `\n` (LineFeed or LF)
- `DataChunkSize = 10E3` - Maximum size of one write/read segment. If transferred data is bigger, it is split to more segments. Default: `1E6` bytes
- `OpcTimeout = 10000` - same as driver.utilities.opc_timeout = 10000. Default: `30000ms`
- `VisaTimeout = 5000` - same as driver.utilities.visa_timeout = 5000. Default: `10000ms`

- `ViClearExeMode = Disabled` - viClear() execution mode. Default: `execute_on_all`
- `OpcQueryAfterWrite = True` - same as driver.utilities.opc_query_after_write = True. Default: `False`
- `StbInErrorCheck = False` - if true, the driver checks errors with *STB? If false, it uses SYST:ERR?. Default: `True`
- `ScpiQuotes = double'. - for SCPI commands, you can define how strings are quoted. With single or double quotes. Possible values: single | double | {char}. Default: ``single`
- `LoggingMode = On` - Sets the logging status right from the start. Default: `Off`
- `LoggingName = 'MyDevice'` - Sets the name to represent the session in the log entries. Default: `'resource_name'`
- `LogToGlobalTarget = True` - Sets the logging target to the class-property previously set with RsCmwWlanMeas.set_global_logging_target() Default: `False`
- `LoggingToConsole = True` - Immediately starts logging to the console. Default: False
- `LoggingToUdp = True` - Immediately starts logging to the UDP port. Default: False
- `LoggingUdpPort = 49200` - UDP port to log to. Default: 49200

Parameters

- **resource_name** – VISA resource name, e.g. 'TCPIP::192.168.2.1::INSTR'
- **id_query** – if True, the instrument's model name is verified against the models supported by the driver and eventually throws an exception.
- **reset** – Resets the instrument (sends *RST command) and clears its status sybsystem.
- **options** – string tokens alternating the driver settings.
- **direct_session** – Another driver object or pyVisa object to reuse the session instead of opening a new session.

static assert_minimum_version(*min_version: str*) → None

Asserts that the driver version fulfills the minimum required version you have entered. This way you make sure your installed driver is of the entered version or newer.

classmethod clear_global_logging_relative_timestamp() → None

Clears the global relative timestamp. After this, all the instances using the global relative timestamp continue logging with the absolute timestamps.

close() → None

Closes the active RsCmwWlanMeas session.

classmethod from_existing_session(*session: object*, *options: str = None*) → RsCmwWlanMeas

Creates a new RsCmwWlanMeas object with the entered 'session' reused.

Parameters

- **session** – can be another driver or a direct pyvisa session.
- **options** – string tokens alternating the driver settings.

classmethod get_global_logging_relative_timestamp() → datetime

Returns global common relative timestamp for log entries.

classmethod get_global_logging_target()

Returns global common target stream.

get_session_handle() → object

Returns the underlying session handle.

get_total_execution_time() → timedelta

Returns total time spent by the library on communicating with the instrument. This time is always shorter than get_total_time(), since it does not include gaps between the communication. You can reset this counter with reset_time_statistics().

get_total_time() → timedelta

Returns total time spent by the library on communicating with the instrument. This time is always shorter than get_total_time(), since it does not include gaps between the communication. You can reset this counter with reset_time_statistics().

static list_resources(*expression: str = '?*::INSTR'*, *visa_select: str = None*) → List[str]

Finds all the resources defined by the expression

- '?*' - matches all the available instruments
- 'USB::?*' - matches all the USB instruments
- 'TCPIP::192?*' - matches all the LAN instruments with the IP address starting with 192

Parameters

- **expression** – see the examples in the function
- **visa_select** – optional parameter selecting a specific VISA. Examples: '@ivi', '@rs'

reset_time_statistics() → None

Resets all execution and total time counters. Affects the results of get_total_time() and get_total_execution_time()

restore_all_repcaps_to_default() → None

Sets all the Group and Global repcaps to their initial values

classmethod set_global_logging_relative_timestamp(*timestamp: datetime*) → None

Sets global common relative timestamp for log entries. To use it, call the following: io.utilities.logger.set_relative_timestamp_global()

classmethod set_global_logging_relative_timestamp_now() → None

Sets global common relative timestamp for log entries to this moment. To use it, call the following: io.utilities.logger.set_relative_timestamp_global().

classmethod set_global_logging_target(*target*) → None

Sets global common target stream that each instance can use. To use it, call the following: io.utilities.logger.set_logging_target_global(). If an instance uses global logging target, it automatically uses the global relative timestamp (if set). You can set the target to None to invalidate it.

Subgroups

6.1 Configure

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MODE
```

class ConfigureCls

class IsignalCls

Isignal commands group definition. 13 total commands, 3 Subgroups, 9 group commands

get_bandwidth() → Bandwidth

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:BWIDth
value: enums.Bandwidth = driver.configure.isignal.get_bandwidth()
```

Selects the channel bandwidth. In the combined signal path (CSP) , consider the dependency between this parameter and the trigger bandwidth, set for the RX frame trigger in the signaling application. See TRIGger:WLAN:SIGN<i>:RX:MACFrame:BW For 802.11ax and trigger source set to 'HE_TB Trigger', the setting depends on the trigger configuration: CONFigure:WLAN:SIGN<i>:CONNection:HETF:CHBW

return

bandwidth: BW05mhz | BW10mhz | BW20mhz | BW40mhz | BW80mhz | BW16mhz | BW88mhz BW05mhz: 5 MHz BW10mhz: 10 MHz BW20mhz: 20 MHz BW40mhz: 40 MHz BW80mhz: 80 MHz BW88mhz: 80+80 MHz BW16mhz: 160 MHz

get_btype() → BurstType

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:BTYPe
value: enums.BurstType = driver.configure.isignal.get_btype()
```

Sets the burst type for standard 802.11n. Do not use the command for other standards.

return

burst_type: MIXed | GREenfield MIXed: Compatibility mode, for coexistence with older standards GREenfield: Greenfield mode, incompatible with older standards

get_cdistance() → int

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:CDIStance
value: int = driver.configure.isignal.get_cdistance()
```

Configures the distance between the center frequencies of the two 80-MHz segments for the bandwidth of 80+80 MHz.

return

channel_distance: numeric Range: 80 MHz to 940 MHz, Unit: MHz

get_elength() → BurstEvalLength

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:ELENgth
value: enums.BurstEvalLength = driver.configure.isignal.get_elength()
```

No command help available

return

evaluation_length: No help available

get_iqswap() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:IQSWap
value: bool = driver.configure.isignal.get_iqswap()
```

Swaps the role of the I and Q axes in the baseband.

return
iqswap: OFF | ON

get_modfilter() → ModulationFilter

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:MODFilter
value: enums.ModulationFilter = driver.configure.isignal.get_modfilter()
```

This command allows you to limit the evaluation to bursts of a particular modulation type. If the received burst has a different modulation, the reliability 'Wrong Modulation' is displayed. In the combined signal path (CSP) , consider the dependency between this parameter and the data rate, set for the RX frame trigger in the signaling application. See TRIGger:WLAN:SIGN<i>:RX:MACFrame:RATE For 802.11ax and trigger source set to 'HE_TB Trigger', the setting depends on the trigger configuration: CONFigure:WLAN:SIGN<i>:STA<s>:CONNection:HETF:MCS

return
modulation_filter: ALL | BPSK | QPSK | QAM16 | QAM64 | QAM256 | QAM1024 | DBPSk | DQPSk | CCK5_5 | CCK11 For OFDM: ALL | BPSK | QPSK | QAM16 | QAM64 | QAM256 | QAM1024 For DSSS: ALL | DBPSk | DQPSk | CCK5_5 | CCK11

get_pclass() → PowerClass

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:PCLass
value: enums.PowerClass = driver.configure.isignal.get_pclass()
```

Sets the STA transmit power class for 802.11p and selects the transmit spectrum mask to be applied.

return
power_class: CLA | CLB | CLCD | USERdefined CLA: class A transmit spectrum mask CLB: class B transmit spectrum mask CLCD: class C or D, no transmit spectrum limit check USERdefined: user-defined transmit spectrum mask

get_rmode() → ReceiveMode

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:RMODe
value: enums.ReceiveMode = driver.configure.isignal.get_rmode()
```

Sets the receive mode. Not all standards support MIMO. If you set a standard that is incompatible with the current receive mode, the receive mode automatically reverts to SISO.

return
receive_mode: SISO | TMIMo | CMIMo SISO: SISO signal CMIMo: Composite MIMO TMIMo: True MIMO

get_standard() → IeeeStandard

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:STANdard
value: enums.IeeeStandard = driver.configure.isignal.get_standard()
```

Selects the IEEE 802.11 standard. Several WLAN signal properties depend on the selected standard, see 'Physical layer'. In the combined signal path (CSP) , consider the dependency between this parameter and the burst type, set for the RX frame trigger in the signaling application. See TRIGger:WLAN:SIGN<i>:RX:MACFrame:BTYPe Selecting a standard that is not compatible with the current scenario restores the 'Standalone' scenario.

return
standard: DSSS | LOFDm | HTOFdm | VHTofdm | HEOFdm | POFDm DSSS: 802.11b/g (DSSS) LOFDm: 802.11a/g (OFDM) HTOFdm: 802.11n VHTofdm: 802.11ac HEOFdm: 802.11ax POFDm: 802.11p

set_bandwidth(*bandwidth: Bandwidth*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:BWIDth
driver.configure.isignal.set_bandwidth(bandwidth = enums.Bandwidth.BW05mhz)
```

Selects the channel bandwidth. In the combined signal path (CSP) , consider the dependency between this parameter and the trigger bandwidth, set for the RX frame trigger in the signaling application. See TRIGger:WLAN:SIGN<i>:RX:MACFrame:BW For 802.11ax and trigger source set to 'HE_TB Trigger', the setting depends on the trigger configuration: CONFigure:WLAN:SIGN<i>:CONNection:HETF:CHBW

param bandwidth
BW05mhz | BW10mhz | BW20mhz | BW40mhz | BW80mhz | BW16mhz | BW88mhz BW05mhz: 5 MHz BW10mhz: 10 MHz BW20mhz: 20 MHz BW40mhz: 40 MHz BW80mhz: 80 MHz BW88mhz: 80+80 MHz BW16mhz: 160 MHz

set_btype(*burst_type: BurstType*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:BTYPe
driver.configure.isignal.set_btype(burst_type = enums.BurstType.AUTO)
```

Sets the burst type for standard 802.11n. Do not use the command for other standards.

param burst_type
MIXed | GREenfield MIXed: Compatibility mode, for coexistence with older standards GREenfield: Greenfield mode, incompatible with older standards

set_cdistance(*channel_distance: int*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:CDIStance
driver.configure.isignal.set_cdistance(channel_distance = 1)
```

Configures the distance between the center frequencies of the two 80-MHz segments for the bandwidth of 80+80 MHz.

param channel_distance
numeric Range: 80 MHz to 940 MHz, Unit: MHz

set_elength(*evaluation_length: BurstEvalLength*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:ELENgth
driver.configure.isignal.set_elength(evaluation_length = enums.BurstEvalLength.
↪REDucedburst)
```

No command help available

param evaluation_length
No help available

set_iqswap(*iqswap: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:IQSWap
driver.configure.isignal.set_iqswap(iqswap = False)
```

Swaps the role of the I and Q axes in the baseband.

param iqswap
OFF | ON

set_modfilter(*modulation_filter: ModulationFilter*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:MODFilter
driver.configure.isignal.set_modfilter(modulation_filter = enums.
↪ModulationFilter.ALL)
```

This command allows you to limit the evaluation to bursts of a particular modulation type. If the received burst has a different modulation, the reliability 'Wrong Modulation' is displayed. In the combined signal path (CSP) , consider the dependency between this parameter and the data rate, set for the RX frame trigger in the signaling application. See TRIGger:WLAN:SIGN<i>:RX:MACFrame:RATE For 802.11ax and trigger source set to 'HE_TB Trigger', the setting depends on the trigger configuration: CONFigure:WLAN:SIGN<i>:STA<s>:CONNection:HETF:MCS

param modulation_filter
ALL | BPSK | QPSK | QAM16 | QAM64 | QAM256 | QAM1024 | DBPSk | DQPSk | CCK5_5 | CCK11 For OFDM: ALL | BPSK | QPSK | QAM16 | QAM64 | QAM256 | QAM1024 For DSSS: ALL | DBPSk | DQPSk | CCK5_5 | CCK11

set_pclass(*power_class: PowerClass*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:PCLass
driver.configure.isignal.set_pclass(power_class = enums.PowerClass.CLA)
```

Sets the STA transmit power class for 802.11p and selects the transmit spectrum mask to be applied.

param power_class
CLA | CLB | CLCD | USERdefined CLA: class A transmit spectrum mask CLB: class B transmit spectrum mask CLCD: class C or D, no transmit spectrum limit check USERdefined: user-defined transmit spectrum mask

set_rmode(*receive_mode: ReceiveMode*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:RMODe
driver.configure.isignal.set_rmode(receive_mode = enums.ReceiveMode.CMIMo)
```

Sets the receive mode. Not all standards support MIMO. If you set a standard that is incompatible with the current receive mode, the receive mode automatically reverts to SISO.

param receive_mode
SISO | TMIMo | CMIMo SISO: SISO signal CMIMo: Composite MIMO TMIMo: True MIMO

set_standard(*standard: IeeeStandard*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:STANdard
driver.configure.isignal.set_standard(standard = enums.IeeeStandard.DSSS)
```

Selects the IEEE 802.11 standard. Several WLAN signal properties depend on the selected standard, see 'Physical layer'. In the combined signal path (CSP) , consider the dependency between this parameter and the burst type, set for the RX frame trigger in the signaling application. See TRIGger:WLAN:SIGN<i>:RX:MACFrame:BTYPe Selecting a standard that is not compatible with the current scenario restores the 'Standalone' scenario.

param standard
DSSS | LOFDm | HTOFdm | VHTofdm | HEOFdm | POFDm DSSS: 802.11b/g (DSSS) LOFDm: 802.11a/g (OFDM) HTOFdm: 802.11n VHTofdm: 802.11ac HEOFdm: 802.11ax POFDm: 802.11p

class ElengthCls

Elength commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class ElengthStruct

Response structure. Fields:

- Evaluation_Length_Chips: int: No parameter help available
- Skip_Ph: bool: OFF | ON OFF: measure also preamble and header ON: skip preamble and header

get() → ElengthStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:DSSS:ELENgth
value: ElengthStruct = driver.configure.isignal.dsss.elength.get()
```

Specifies the evaluation length of the burst for DSSS signals.

return
structure: for return value, see the help for ElengthStruct structure arguments.

set(*evaluation_length_chips: int*, *skip_ph: bool = None*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:DSSS:ELENgth
driver.configure.isignal.dsss.elength.set(evaluation_length_chips = 1, skip_ph␣
↪= False)
```

Specifies the evaluation length of the burst for DSSS signals.

param evaluation_length_chips
numeric Number of payload chips Range: 1000 chips to 270000 chips, Unit: chip

param skip_ph
OFF | ON OFF: measure also preamble and header ON: skip preamble and header

6.1.1.2 Ofdm

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:ISIGnal:OFDM:ELENgth
```

class OfdmCls

Ofdm commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get_elength() → int

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:OFDM:ELENgth
value: int = driver.configure.isignal.ofdm.get_elength()
```

Specifies the evaluation length of the burst for OFDM signals.

return
evaluation_length_symbols: No help available

set_elength(*evaluation_length_symbols: int*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:ISIGnal:OFDM:ELENgth
driver.configure.isignal.ofdm.set_elength(evaluation_length_symbols = 1)
```

Specifies the evaluation length of the burst for OFDM signals.

param evaluation_length_symbols
numeric Number of payload symbols Range: 16 symbols to 1377 symbols, Unit: symbols

6.1.1.3 Tdata

SCPI Command :

```
CONFigure:WLAN:MEASurement<instance>:ISIGnal:TDATa
```

class TdataCls

Tdata commands group definition. 2 total commands, 1 Subgroups, 1 group commands

get_value() → str

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:ISIGnal:TDATa
value: str = driver.configure.isignal.tdata.get_value()
```

Specifies the training data source to be used as the reference signal for CMIMO measurements.

return
filename: 'no data' | 'Internal' | 'file name' 'no data': Use no training data. 'Internal': Use in-memory data, acquired during preceding training mode runs. In-memory data must be available. 'file name': Use the training data file with the specified name, in the directory @USERDATA/MIMODdata.

set_value(*filename: str*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:ISIGnal:TDATa
driver.configure.isignal.tdata.set_value(filename = 'abc')
```

Specifies the training data source to be used as the reference signal for CMIMO measurements.

param filename
'no data' | 'Internal' | 'file name' 'no data': Use no training data. 'Internal': Use in-memory data, acquired during preceding training mode runs. In-memory data must be available. 'file name': Use the training data file with the specified name, in the directory @USERDATA/MIMODdata.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.isignal.tdata.clone()
```

Subgroups

6.1.1.3.1 File

SCPI Command :

```
CONFigure:WLAN:MEASurement<instance>:ISIGnal:TDATa:FILE:DATE
```

class FileCls

File commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get_date() → str

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:ISIGnal:TDATa:FILE:DATE
value: str = driver.configure.isignal.tdata.file.get_date()
```

Returns the last modified date of the currently loaded training data file, if any.

return
file_date: string String with a formatted date or NAV

6.1.2 Mimo

SCPI Command :

```
CONFigure:WLAN:MEASurement<instance>:MIMO:NOANtennas
```

class MimoCls

Mimo commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get_no_antennas() → int

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:MIMO:NOANtennas
value: int = driver.configure.mimo.get_no_antennas()
```

Sets the number of connected antennas for SISO and MIMO measurements.

return
num_of_antennas: decimal Number of antennas (1..8) , depending on receive mode

set_no_antennas(*num_of_antennas: int*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:MIMO:NOANtennas
driver.configure.mimo.set_no_antennas(num_of_antennas = 1)
```

Sets the number of connected antennas for SISO and MIMO measurements.

param num_of_antennas
decimal Number of antennas (1..8) , depending on receive mode

6.1.3 MultiEval

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:TOUT
CONFigure:WLAN:MEASurement<Instance>:MEValuation:CFOestimate
CONFigure:WLAN:MEASurement<Instance>:MEValuation:EMEThod
CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCONdition
CONFigure:WLAN:MEASurement<Instance>:MEValuation:REPetition
CONFigure:WLAN:MEASurement<Instance>:MEValuation:MOEXception
CONFigure:WLAN:MEASurement<Instance>:MEValuation:SMODe
```

class MultiEvalCls

MultiEval commands group definition. 190 total commands, 9 Subgroups, 7 group commands

get_cfo_estimate() → CfoEstimation

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:CFOestimate
value: enums.CfoEstimation = driver.configure.multiEval.get_cfo_estimate()
```

No command help available

return
cfo_est: No help available

get_emethod() → EvmMethod

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:EMEThod
value: enums.EvmMethod = driver.configure.multiEval.get_emethod()
```

This parameter is relevant for 802.11b signals only. It selects the EVM measurement method - according to standard IEEE Std 802.11-2007, IEEE Std 802.11b-1999, or according to standard IEEE Std 802.11-2016.

return
evm_method_11_b: ST2007 | ST1999 | ST2016

get_mo_exception() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:MOEXception
value: bool = driver.configure.multiEval.get_mo_exception()
```

Specifies whether measurement results that the R&S CMW identifies as faulty or inaccurate are rejected.

return
meas_on_exception: OFF | ON OFF: Faulty results are rejected. ON: Results are never rejected.

get_repetition() → Repeat

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:REPetition
value: enums.Repeat = driver.configure.multiEval.get_repetition()
```

Specifies the repetition mode of the measurement. The repetition mode specifies whether the measurement is stopped after a single shot or repeated continuously. Use CONFigure:...:MEAS<i>:...:SCOunt to determine the number of measurement intervals per single shot.

return
repetition: SINGleshot | CONTinuous SINGleshot: Single-shot measurement CONTinuous: Continuous measurement

get_scondition() → StopCondition

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCONdition
value: enums.StopCondition = driver.configure.multiEval.get_scondition()
```

Qualifies whether the measurement is stopped after a failed limit check or continued. SLFail means that the measurement is stopped and reaches the RDY state when one of the results exceeds the limits.

return
stop_condition: NONE | SLFail NONE: Continue measurement irrespective of the limit check. SLFail: Stop measurement on limit failure.

get_smode() → SynchroMode

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SMODe
value: enums.SynchroMode = driver.configure.multiEval.get_smode()

    INTRO_CMD_HELP: Sets the synchronization mode:

    - Normal: synchronization according to preamble detection
    - Tolerant: synchronization with the second part of preamble when the first␣
```

(continues on next page)

(continued from previous page)

```
↪part cannot be detected

    :return: synchronization_mode: No help available
```

get_timeout() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TOUT
value: float = driver.configure.multiEval.get_timeout()
```

Defines a timeout for the measurement. The timer is started when the measurement is initiated via a READ or INIT command. It is not started if the measurement is initiated manually. When the measurement has completed the first measurement cycle (first single shot) , the statistical depth is reached and the timer is reset. If the first measurement cycle has not been completed when the timer expires, the measurement is stopped. The measurement state changes to RDY. The reliability indicator is set to 1, indicating that a measurement timeout occurred. Still running READ, FETCh or CALCulate commands are completed, returning the available results. At least for some results, there are no values at all or the statistical depth has not been reached. A timeout of 0 s corresponds to an infinite measurement timeout. The measurement of a DSSS signal with low data rate and large payload sizes can take up to 40 s. Set the measurement timeout to an adequate value, e.g. to 60 s.

return
tcd_timeout: numeric Unit: s

set_cfo_estimate(*cfo_est: CfoEstimation*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:CFOestimate
driver.configure.multiEval.set_cfo_estimate(cfo_est = enums.CfoEstimation.
↪FULLpacket)
```

No command help available

param cfo_est
No help available

set_emethod(*evm_method_11_b: EvmMethod*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:EMEThod
driver.configure.multiEval.set_emethod(evm_method_11_b = enums.EvmMethod.ST1999)
```

This parameter is relevant for 802.11b signals only. It selects the EVM measurement method - according to standard IEEE Std 802.11-2007, IEEE Std 802.11b-1999, or according to standard IEEE Std 802.11-2016.

param evm_method_11_b
ST2007 | ST1999 | ST2016

set_mo_exception(*meas_on_exception: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:MOEXception
driver.configure.multiEval.set_mo_exception(meas_on_exception = False)
```

Specifies whether measurement results that the R&S CMW identifies as faulty or inaccurate are rejected.

param meas_on_exception
OFF | ON OFF: Faulty results are rejected. ON: Results are never rejected.

set_repetition(*repetition: Repeat*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:REPetition
driver.configure.multiEval.set_repetition(repetition = enums.Repeat.CONTinuous)
```

Specifies the repetition mode of the measurement. The repetition mode specifies whether the measurement is stopped after a single shot or repeated continuously. Use CONFigure:..:MEAS<i>:...:SCOunt to determine the number of measurement intervals per single shot.

param repetition
SINGleshot | CONTinuous SINGleshot: Single-shot measurement CONTinuous: Continuous measurement

set_scondition(*stop_condition: StopCondition*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCONdition
driver.configure.multiEval.set_scondition(stop_condition = enums.StopCondition.
↪NONE)
```

Qualifies whether the measurement is stopped after a failed limit check or continued. SLFail means that the measurement is stopped and reaches the RDY state when one of the results exceeds the limits.

param stop_condition
NONE | SLFail NONE: Continue measurement irrespective of the limit check. SLFail: Stop measurement on limit failure.

set_smode(*synchronization_mode: SynchroMode*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SMODe
driver.configure.multiEval.set_smode(synchronization_mode = enums.SynchroMode.
↪NORMal)

    INTRO_CMD_HELP: Sets the synchronization mode:

    - Normal: synchronization according to preamble detection
    - Tolerant: synchronization with the second part of preamble when the first␣
↪part cannot be detected

    :param synchronization_mode: NORMal | TOLerant
```

set_timeout(*tcd_timeout: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TOUT
driver.configure.multiEval.set_timeout(tcd_timeout = 1.0)
```

Defines a timeout for the measurement. The timer is started when the measurement is initiated via a READ or INIT command. It is not started if the measurement is initiated manually. When the measurement has completed the first measurement cycle (first single shot) , the statistical depth is reached and the timer is reset. If the first measurement cycle has not been completed when the timer expires, the measurement is stopped. The measurement state changes to RDY. The reliability indicator is set to 1, indicating that a measurement timeout occurred. Still running READ, FETCh or CALCulate commands are completed, returning the available results. At least for some results, there are no values at all or the statistical depth has not been reached. A timeout of 0 s corresponds to an infinite measurement timeout. The measurement of a DSSS signal with low data rate and large payload sizes can take up to 40 s. Set the measurement timeout to an adequate value, e.g. to 60 s.

param tcd_timeout
numeric Unit: s

# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:COMPensation:CESTimation
driver.configure.multiEval.compensation.set_cestimation(channel_estimation =␣
↪enums.ChannelEstimation.PAYLoad)
```

Specifies whether the channel estimation is done in payload or preamble.

param channel_estimation
PAYLoad | PREamble PAYLoad: Channel estimation in payload and preamble PREamble: Channel estimation in preamble only *RST: PRE

set_ncancel(*noise_cancel: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:COMPensation:NCANcel
driver.configure.multiEval.compensation.set_ncancel(noise_cancel = False)
```

No command help available

param noise_cancel
No help available

set_smoothing(*smoothing: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:COMPensation:SMOothing
driver.configure.multiEval.compensation.set_smoothing(smoothing = False)
```

No command help available

param smoothing
No help available

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.compensation.clone()
```

Subgroups

6.1.3.1.1 EfTaps

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:COMPensation:EFTaps
```

class EfTapsCls

EfTaps commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class EfTapsStruct

Response structure. Fields:

- Equalizer_Filter_Taps_Enable: bool: No parameter help available
- Equalizer_Filter_Taps_Value: int: No parameter help available

get() → EfTapsStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:COMPensation:EFTaps
value: EfTapsStruct = driver.configure.multiEval.compensation.efTaps.get()
```

This command is relevant for DSSS signals only. It determines if and how accurate the transmit filter is estimated.

return
structure: for return value, see the help for EfTapsStruct structure arguments.

set(*equalizer_filter_taps_enable: bool*, *equalizer_filter_taps_value: int = None*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:COMPensation:EFTaps
driver.configure.multiEval.compensation.efTaps.set(equalizer_filter_taps_enable␣
↪= False, equalizer_filter_taps_value = 1)
```

This command is relevant for DSSS signals only. It determines if and how accurate the transmit filter is estimated.

param equalizer_filter_taps_enable
No help available

param equalizer_filter_taps_value
No help available

6.1.3.1.2 SkipSymbols

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:COMPensation:SKIPsymbols
```

class SkipSymbolsCls

SkipSymbols commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class SkipSymbolsStruct

Response structure. Fields:

- Skip_Symbols_Head: int: decimal Number of heading symbols to be skipped Range: 0 Sym to 100 Sym, Unit: symbol
- Skip_Symbols_Tail: int: decimal Number of tailing symbols to be skipped Range: 0 Sym to 100 Sym, Unit: symbol

get() → SkipSymbolsStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:COMPensation:SKIPsymbols
value: SkipSymbolsStruct = driver.configure.multiEval.compensation.skipSymbols.
↪get()
```

Defines how many head and tail symbols are excluded from OFDM modulation measurements.

return
structure: for return value, see the help for SkipSymbolsStruct structure arguments.

set(*skip_symbols_head: int*, *skip_symbols_tail: int*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:COMPensation:SKIPsymbols
driver.configure.multiEval.compensation.skipSymbols.set(skip_symbols_head = 1,␣
↪skip_symbols_tail = 1)
```

Defines how many head and tail symbols are excluded from OFDM modulation measurements.

param skip_symbols_head
decimal Number of heading symbols to be skipped Range: 0 Sym to 100 Sym, Unit: symbol

param skip_symbols_tail
decimal Number of tailing symbols to be skipped Range: 0 Sym to 100 Sym, Unit: symbol

6.1.3.1.3 Tracking

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:COMPensation:TRACking:PHASe
CONFigure:WLAN:MEASurement<Instance>:MEValuation:COMPensation:TRACking:TIMing
CONFigure:WLAN:MEASurement<Instance>:MEValuation:COMPensation:TRACking:LEVel
```

class TrackingCls

Tracking commands group definition. 3 total commands, 0 Subgroups, 3 group commands

get_level() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:COMPensation:TRACking:LEVel
value: bool = driver.configure.multiEval.compensation.tracking.get_level()
```

Activate or deactivate level tracking. With enabled tracking, fluctuations are compensated.

return
level: OFF | ON OFF: Tracking disabled ON: Tracking enabled

get_phase() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:COMPensation:TRACking:PHASe
value: bool = driver.configure.multiEval.compensation.tracking.get_phase()
```

Activate or deactivate phase tracking. With enabled tracking, fluctuations are compensated. For composite MIMO and 802. 11ac input signals, phase tracking is always enabled.

return
phase: OFF | ON OFF: Tracking disabled ON: Tracking enabled

get_timing() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:COMPensation:TRACking:TIMing
value: bool = driver.configure.multiEval.compensation.tracking.get_timing()
```

Activate or deactivate timing tracking. With enabled tracking, fluctuations are compensated.

return
timing: OFF | ON OFF: Tracking disabled ON: Tracking enabled

set_level(*level: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:COMPensation:TRACking:LEVel
driver.configure.multiEval.compensation.tracking.set_level(level = False)
```

Activate or deactivate level tracking. With enabled tracking, fluctuations are compensated.

param level
OFF | ON OFF: Tracking disabled ON: Tracking enabled

set_phase(*phase: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:COMPensation:TRACking:PHASe
driver.configure.multiEval.compensation.tracking.set_phase(phase = False)
```

Activate or deactivate phase tracking. With enabled tracking, fluctuations are compensated. For composite MIMO and 802. 11ac input signals, phase tracking is always enabled.

param phase
OFF | ON OFF: Tracking disabled ON: Tracking enabled

set_timing(*timing: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:COMPensation:TRACking:TIMing
driver.configure.multiEval.compensation.tracking.set_timing(timing = False)
```

Activate or deactivate timing tracking. With enabled tracking, fluctuations are compensated.

param timing
OFF | ON OFF: Tracking disabled ON: Tracking enabled

6.1.3.2 Demod

class DemodCls

Demod commands group definition. 1 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.demod.clone()
```

Subgroups

6.1.3.2.1 Fft

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:DEMod:FFT:OFFSet
```

class FftCls

Fft commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get_offset() → FftOffset

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:DEMod:FFT:OFFSet
value: enums.FftOffset = driver.configure.multiEval.demod.fft.get_offset()
```

Sets the FFT start offset for OFDM signals.

return
offset: CENT | PEAK | AUTO CENT: Guard interval center used as start offset PEAK: Peak of fine-timing metric used to determine start offset AUTO: Automatic selection of optimal start offset

set_offset(*offset: FftOffset*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:DEMod:FFT:OFFSet
driver.configure.multiEval.demod.fft.set_offset(offset = enums.FftOffset.AUTO)
```

Sets the FFT start offset for OFDM signals.

param offset
CENT | PEAK | AUTO CENT: Guard interval center used as start offset PEAK: Peak of fine-timing metric used to determine start offset AUTO: Automatic selection of optimal start offset

6.1.3.3 Limit

SCPI Commands :

```
CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:UTEPower
CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:UTERror
```

class LimitCls

Limit commands group definition. 120 total commands, 4 Subgroups, 2 group commands

get_ut_error() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:UTERror
value: bool = driver.configure.multiEval.limit.get_ut_error()
```

No command help available

return
ute_limits: No help available

get_ute_power() → LowHigh

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:UTEPower
value: enums.LowHigh = driver.configure.multiEval.limit.get_ute_power()
```

No command help available

return
ute_power: No help available

set_ut_error(*ute_limits: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:UTERror
driver.configure.multiEval.limit.set_ut_error(ute_limits = False)
```

No command help available

param ute_limits
No help available

set_ute_power(*ute_power: LowHigh*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:UTEPower
driver.configure.multiEval.limit.set_ute_power(ute_power = enums.LowHigh.HIGH)
```

No command help available

param ute_power
No help available

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.clone()
```

Subgroups

6.1.3.3.1 Modulation

class ModulationCls

Modulation commands group definition. 42 total commands, 7 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.modulation.clone()
```

Subgroups

6.1.3.3.1.1 Dsss

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:DSSS:EVMRms
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:DSSS:EVMPeak
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:DSSS:IQOFfset
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:DSSS:CFERror
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:DSSS:CCERror
```

class DsssCls

Dsss commands group definition. 5 total commands, 0 Subgroups, 5 group commands

get_cc_error() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:DSSS:CCERror
value: float or bool = driver.configure.multiEval.limit.modulation.dsss.get_cc_
↪error()
```

Defines and activates an upper limit for the chip clock error (transmission scheme DSSS) .

return
clock_error: (float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

get_cf_error() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:DSSS:CFERror
value: float or bool = driver.configure.multiEval.limit.modulation.dsss.get_cf_
↪error()
```

Defines and activates an upper limit for the center frequency error (transmission scheme DSSS) .

return
freq_error: (float or boolean) numeric | ON | OFF Range: 0 Hz to 100 MHz, Unit: Hz Additional parameters: OFF | ON (disables | enables the limit check)

get_evm_ems() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:DSSS:EVMRms
value: float or bool = driver.configure.multiEval.limit.modulation.dsss.get_evm_
↪ems()
```

Defines and activates upper limits for the error vector magnitude (EVM) RMS values of the data carriers (transmission scheme DSSS) .

return
evm_rms: (float or boolean) numeric | ON | OFF Range: 0 % to 100 % Additional parameters: OFF | ON (disables | enables the limit check)

get_evm_peak() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:DSSS:EVMPeak
value: float or bool = driver.configure.multiEval.limit.modulation.dsss.get_evm_
↪peak()
```

Defines and activates upper limits for the error vector magnitude (EVM) peak values of the data carriers (transmission scheme DSSS) .

return
evm_peak: (float or boolean) numeric | ON | OFF Range: 0 % to 100 % Additional parameters: OFF | ON (disables | enables the limit check)

get_iq_offset() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:DSSS:IQOFfset
value: float or bool = driver.configure.multiEval.limit.modulation.dsss.get_iq_
↪offset()
```

Defines and activates an upper limit for the I/Q origin offset (transmission scheme DSSS) .

return
iq_offset: (float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

set_cc_error(*clock_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:DSSS:CCERror
driver.configure.multiEval.limit.modulation.dsss.set_cc_error(clock_error = 1.0)
```

Defines and activates an upper limit for the chip clock error (transmission scheme DSSS) .

param clock_error
(float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

set_cf_error(*freq_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:DSSS:CFERror
driver.configure.multiEval.limit.modulation.dsss.set_cf_error(freq_error = 1.0)
```

Defines and activates an upper limit for the center frequency error (transmission scheme DSSS) .

param freq_error
(float or boolean) numeric | ON | OFF Range: 0 Hz to 100 MHz, Unit: Hz Additional parameters: OFF | ON (disables | enables the limit check)

set_evm_ems(*evm_rms: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:DSSS:EVMRms
driver.configure.multiEval.limit.modulation.dsss.set_evm_ems(evm_rms = 1.0)
```

Defines and activates upper limits for the error vector magnitude (EVM) RMS values of the data carriers (transmission scheme DSSS) .

param evm_rms
(float or boolean) numeric | ON | OFF Range: 0 % to 100 % Additional parameters: OFF | ON (disables | enables the limit check)

`set_evm_peak`(*evm_peak: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:DSSS:EVMPeak
driver.configure.multiEval.limit.modulation.dsss.set_evm_peak(evm_peak = 1.0)
```

Defines and activates upper limits for the error vector magnitude (EVM) peak values of the data carriers (transmission scheme DSSS) .

param evm_peak
(float or boolean) numeric | ON | OFF Range: 0 % to 100 % Additional parameters: OFF | ON (disables | enables the limit check)

`set_iq_offset`(*iq_offset: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:DSSS:IQOFfset
driver.configure.multiEval.limit.modulation.dsss.set_iq_offset(iq_offset = 1.0)
```

Defines and activates an upper limit for the I/Q origin offset (transmission scheme DSSS) .

param iq_offset
(float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

6.1.3.3.1.2 EhtOfdm

SCPI Commands :

```
CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:MODulation:EHTofdm:EVMall
CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:MODulation:EHTofdm:EVMPilot
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:EHTofdm:CFERror
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:EHTofdm:SCERror
```

`class EhtOfdmCls`

EhtOfdm commands group definition. 6 total commands, 2 Subgroups, 4 group commands

`class EvmAllStruct`

Structure for setting input parameters. Fields:

- Evm_Br_12: float or bool: No parameter help available
- Evm_Qr_12: float or bool: No parameter help available
- Evm_Qr_34: float or bool: No parameter help available

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:SCERror
value: float or bool = driver.configure.multiEval.limit.modulation.heOfdm.get_
↪sc_error()
```

Defines and activates an upper limit for the symbol clock error in 802.11ax signals.

return
clock_error: (float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

set_cf_error(*center_freq_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:CFERror
driver.configure.multiEval.limit.modulation.heOfdm.set_cf_error(center_freq_
↪error = 1.0)
```

Defines and activates an upper limit for the center frequency error in 802.11ax signals.

param center_freq_error
(float or boolean) numeric | ON | OFF Range: 0 Hz to 100 MHz Additional parameters: OFF | ON (disables | enables the limit check)

set_sc_error(*clock_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:SCERror
driver.configure.multiEval.limit.modulation.heOfdm.set_sc_error(clock_error = 1.
↪0)
```

Defines and activates an upper limit for the symbol clock error in 802.11ax signals.

param clock_error
(float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.modulation.heOfdm.clone()
```

Subgroups

6.1.3.3.1.7 CfoDistribution

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:HEOFdm:CFDistrib
```

class CfoDistributionCls

CfoDistribution commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class CfoDistributionStruct

Response structure. Fields:

- Cfo_Percentage: float or bool: numeric | ON | OFF Upper limit for the tolerated CFO errors (CFO exceeding the specified CFO_Frequency) Unit: % Additional parameters: OFF | ON (disables | enables the limit check)
- Cfo_Frequency: float: numeric Border value defining CFO error Unit: Hz

get() → CfoDistributionStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:CFDistrib
value: CfoDistributionStruct = driver.configure.multiEval.limit.modulation.
↪heOfdm.cfoDistribution.get()
```

Configure the limit of carrier frequency offset (CFO) error distribution for HE modulation measurements. Exceeding the limit has no impact on the stop 'On Limit Failure' condition or out-of-tolerance counter.

return
structure: for return value, see the help for CfoDistributionStruct structure arguments.

set(*cfo_percentage: float*, *cfo_frequency: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:CFDistrib
driver.configure.multiEval.limit.modulation.heOfdm.cfoDistribution.set(cfo_
↪percentage = 1.0, cfo_frequency = 1.0)
```

Configure the limit of carrier frequency offset (CFO) error distribution for HE modulation measurements. Exceeding the limit has no impact on the stop 'On Limit Failure' condition or out-of-tolerance counter.

param cfo_percentage
(float or boolean) numeric | ON | OFF Upper limit for the tolerated CFO errors (CFO exceeding the specified CFO_Frequency) Unit: % Additional parameters: OFF | ON (disables | enables the limit check)

param cfo_frequency
numeric Border value defining CFO error Unit: Hz

6.1.3.3.1.8 EvmAll

SCPI Commands :

```

class EvmAllCls

EvmAll commands group definition. 4 total commands, 0 Subgroups, 4 group commands

class TbCoderateStruct

Structure for setting input parameters. Fields:

- Cr_Bpsk: enums.Coderate: CR14dcm | CR38dcm | CR12 | CR23 | CR34 | CR56 Coding rate for BPSK modulation type CR14dcm: 1/4 DCM (coding rate 1/2 with DCM) CR38dcm: 3/8 DCM (coding rate 3/4 with DCM) CR12: 1/2 (coding rate 1/2 without DCM) CR23: 2/3 (coding rate 2/3 without DCM) CR34: 3/4 (coding rate 3/4 without DCM) CR56: 5/6 (coding rate 5/6 without DCM)
- Cr_Qpsk: enums.Coderate: CR14dcm | CR38dcm | CR12 | CR23 | CR34 | CR56
- Cr_16_Qam: enums.Coderate: CR14dcm | CR38dcm | CR12 | CR23 | CR34 | CR56
- Cr_64_Qam: enums.Coderate: CR14dcm | CR38dcm | CR12 | CR23 | CR34 | CR56
- Cr_256_Qam: enums.Coderate: CR14dcm | CR38dcm | CR12 | CR23 | CR34 | CR56
- Cr_1024_Qam: enums.Coderate: CR14dcm | CR38dcm | CR12 | CR23 | CR34 | CR56

class TbHighStruct

Structure for setting input parameters. Fields:

- Evm_Bpsk: float or bool: numeric | ON | OFF EVM limit for BPSK Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Qpsk: float or bool: numeric | ON | OFF EVM limit for QPSK Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_16_Qam: float or bool: numeric | ON | OFF EVM limit for 16-QAM Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_64_Qam: float or bool: numeric | ON | OFF EVM limit for 64-QAM Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_256_Qam: float or bool: numeric | ON | OFF EVM limit for 256-QAM Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_1024_Qam: float or bool: numeric | ON | OFF EVM limit for 1024-QAM Additional parameters: OFF | ON (disables | enables the limit check)

class TbLowStruct

Structure for setting input parameters. Fields:

- Evm_Bpsk: float or bool: numeric | ON | OFF EVM limit for BPSK Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Qpsk: float or bool: numeric | ON | OFF EVM limit for QPSK Additional parameters: OFF | ON (disables | enables the limit check)

- Evm_16_Qam: float or bool: numeric | ON | OFF EVM limit for 16-QAM Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_64_Qam: float or bool: numeric | ON | OFF EVM limit for 64-QAM Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_256_Qam: float or bool: numeric | ON | OFF EVM limit for 256-QAM Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_1024_Qam: float or bool: numeric | ON | OFF EVM limit for 1024-QAM Additional parameters: OFF | ON (disables | enables the limit check)

`class ValueStruct`

Structure for setting input parameters. Contains optional set arguments. Fields:

- Evm_Br_14: float or bool: numeric | ON | OFF Limits for BPSK, coding rate 1/4, dual carrier modulation (DCM) Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Br_12: float or bool: numeric | ON | OFF Limits for BPSK, coding rate 1/2 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Qr_14: float or bool: numeric | ON | OFF Limits for QPSK, coding rate 1/4 DCM Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Qr_12: float or bool: numeric | ON | OFF Limits for QPSK, coding rate 1/2 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Qr_34: float or bool: numeric | ON | OFF Limits for QPSK, coding rate 3/4 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_16_Qam_14: float or bool: numeric | ON | OFF Limits for 16-QAM, coding rate 1/4 DCM Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_16_Qam_38: float or bool: numeric | ON | OFF Limits for 16-QAM, coding rate 3/8 DCM Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_16_Qam_12: float or bool: numeric | ON | OFF Limits for 16-QAM, coding rate 1/2 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_16_Qam_34: float or bool: numeric | ON | OFF Limits for 16-QAM, coding rate 3/4 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_64_Qam_23: float or bool: numeric | ON | OFF Limits for 64-QAM, coding rate 2/3 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_64_Qam_34: float or bool: numeric | ON | OFF Limits for 64-QAM, coding rate 3/4 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_64_Qam_56: float or bool: numeric | ON | OFF Limits for 64-QAM, coding rate 5/6 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_256_Qam_34: float or bool: numeric | ON | OFF Limits for 256-QAM, coding rate 3/4 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_256_Qam_56: float or bool: numeric | ON | OFF Limits for 256-QAM, coding rate 5/6 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_1024_Qam_34: float or bool: Optional setting parameter. numeric | ON | OFF Limits for 1024-QAM, coding rate 3/4 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

- Evm_1024_Qam_56: float or bool: Optional setting parameter. numeric | ON | OFF Limits for 1024-QAM, coding rate 5/6 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

get_tb_coderate() → TbCoderateStruct

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMall:TBCoderate
value: TbCoderateStruct = driver.configure.multiEval.limit.modulation.heOfdm.
↪evmAll.get_tb_coderate()
```

Specifies the coding rate of HE TB PPDU per modulation type, used for the calculation of unused tone error limit line.

return
structure: for return value, see the help for TbCoderateStruct structure arguments.

get_tb_high() → TbHighStruct

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMall:TBHigh
value: TbHighStruct = driver.configure.multiEval.limit.modulation.heOfdm.evmAll.
↪get_tb_high()
```

Sets EVM limits for HE TB PPDU when transmit power is larger than the maximum power of MCS 7. The default values are in line with standard IEEE Std 802.11ax-2021, table 27-49 Allowed relative constellation error versus constellation size and coding rate.

return
structure: for return value, see the help for TbHighStruct structure arguments.

get_tb_low() → TbLowStruct

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMall:TBLow
value: TbLowStruct = driver.configure.multiEval.limit.modulation.heOfdm.evmAll.
↪get_tb_low()
```

Sets EVM limits for HE TB PPDU when transmit power is less than or equal to the maximum power of MCS 7. The default values are in line with standard IEEE Std 802.11ax-2021, table 27-49 Allowed relative constellation error versus constellation size and coding rate.

return
structure: for return value, see the help for TbLowStruct structure arguments.

get_value() → ValueStruct

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMall
value: ValueStruct = driver.configure.multiEval.limit.modulation.heOfdm.evmAll.
↪get_value()
```

Defines and activates upper limits for the error vector magnitude (EVM) of 802.11ax data carriers.

return
structure: for return value, see the help for ValueStruct structure arguments.

set_tb_coderate(*value: TbCoderateStruct*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMall:TBCoderate
structure = driver.configure.multiEval.limit.modulation.heOfdm.evmAll.

structure.Evm_1024_Qam_56: float or bool = 1.0
driver.configure.multiEval.limit.modulation.heOfdm.evmAll.set_value(value =␣
↪structure)
```

Defines and activates upper limits for the error vector magnitude (EVM) of 802.11ax data carriers.

param value
see the help for ValueStruct structure arguments.

6.1.3.3.1.9 EvmPilot

SCPI Commands :

```
CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:MODulation:HEOFdm:EVMPilot:TBHigh
CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:MODulation:HEOFdm:EVMPilot:TBLow
CONFigure:WLAN:MEASurement<instance>:MEValuation:LIMit:MODulation:HEOFdm:EVMPilot
```

class EvmPilotCls

EvmPilot commands group definition. 3 total commands, 0 Subgroups, 3 group commands

get_tb_high() → float

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMPilot:TBHigh
value: float or bool = driver.configure.multiEval.limit.modulation.heOfdm.
↪evmPilot.get_tb_high()
```

Sets EVM limits for a pilot subcarrier in 802.11ax trigger-based signals, when transmit power is larger than the maximum power of MCS 7.

return
evm_pilot: (float or boolean) numeric | ON | OFF Additional parameters: OFF | ON (disables | enables the limit check)

get_tb_low() → float

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMPilot:TBLow
value: float or bool = driver.configure.multiEval.limit.modulation.heOfdm.
↪evmPilot.get_tb_low()
```

Sets EVM limits for a pilot subcarrier in 802.11ax trigger-based signals, when transmit power is less than or equal to the maximum power of MCS 7.

return
evm_pilot: (float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)

get_value() → float

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMPilot
value: float or bool = driver.configure.multiEval.limit.modulation.heOfdm.
↪evmPilot.get_value()
```

Defines and activates an upper limit for the error vector magnitude (EVM) of the pilot carriers in 802.11ax signals.

return
evm_pilot: (float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

set_tb_high(*evm_pilot: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMPilot:TBHigh
driver.configure.multiEval.limit.modulation.heOfdm.evmPilot.set_tb_high(evm_
↪pilot = 1.0)
```

Sets EVM limits for a pilot subcarrier in 802.11ax trigger-based signals, when transmit power is larger than the maximum power of MCS 7.

param evm_pilot
(float or boolean) numeric | ON | OFF Additional parameters: OFF | ON (disables | enables the limit check)

set_tb_low(*evm_pilot: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMPilot:TBLow
driver.configure.multiEval.limit.modulation.heOfdm.evmPilot.set_tb_low(evm_
↪pilot = 1.0)
```

Sets EVM limits for a pilot subcarrier in 802.11ax trigger-based signals, when transmit power is less than or equal to the maximum power of MCS 7.

param evm_pilot
(float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)

set_value(*evm_pilot: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:EVMPilot
driver.configure.multiEval.limit.modulation.heOfdm.evmPilot.set_value(evm_pilot␣
↪= 1.0)
```

Defines and activates an upper limit for the error vector magnitude (EVM) of the pilot carriers in 802.11ax signals.

param evm_pilot
(float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

6.1.3.3.1.10 IqOffset

class IqOffsetCls

IqOffset commands group definition. 1 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.modulation.heOfdm.iqOffset.clone()
```

Subgroups

6.1.3.3.1.11 Bw<BandwidthE>

RepCap Settings

```
# Range: Bw5 .. Bw8080
rc = driver.configure.multiEval.limit.modulation.heOfdm.iqOffset.bw.repcap_bandwidthE_
↪get()
driver.configure.multiEval.limit.modulation.heOfdm.iqOffset.bw.repcap_bandwidthE_
↪set(repcap.BandwidthE.Bw5)
```

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:HEOFdm:IQOFfset:BW<BW>
```

class BwCls

Bw commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: BandwidthE, default value after init: BandwidthE.Bw5

class BwStruct

Response structure. Fields:

- Offset_Value_Rel: float or bool: numeric | ON | OFF Relative limit Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Offset_Value_Abs: float or bool: numeric | ON | OFF Absolute limit Range: -100 dBm to 0 dBm, Unit: dBm Additional parameters: OFF | ON (disables | enables the limit check)

get(*bandwidthE=BandwidthE.Default*) → BwStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>

value: BwStruct = driver.configure.multiEval.limit.modulation.heOfdm.iqOffset.
↪bw.get(bandwidthE = repcap.BandwidthE.Default)
```

Defines and activates upper limits for the I/Q origin offset for 802.11ax and channel bandwidth <BW>.

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
structure: for return value, see the help for BwStruct structure arguments.

set(*offset_value_rel: float*, *offset_value_abs: float = None*, *bandwidthE=BandwidthE.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HEOFdm:IQOFfset:BW<BW>
driver.configure.multiEval.limit.modulation.heOfdm.iqOffset.bw.set(offset_value_
↪rel = 1.0, offset_value_abs = 1.0, bandwidthE = repcap.BandwidthE.Default)
```

Defines and activates upper limits for the I/Q origin offset for 802.11ax and channel bandwidth <BW>.

param offset_value_rel
(float or boolean) numeric | ON | OFF Relative limit Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

param offset_value_abs
(float or boolean) numeric | ON | OFF Absolute limit Range: -100 dBm to 0 dBm, Unit: dBm Additional parameters: OFF | ON (disables | enables the limit check)

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.modulation.heOfdm.iqOffset.bw.clone()
```

6.1.3.3.1.12 HtOfdm

SCPI Commands :

```

class HtOfdmCls

HtOfdm commands group definition. 5 total commands, 1 Subgroups, 4 group commands

class EvmStruct

Structure for setting input parameters. Fields:

- Evm_Br_12: float or bool: numeric | ON | OFF Limits for BPSK, coding rate 1/2 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Qr_12: float or bool: numeric | ON | OFF Limits for QPSK, coding rate 1/2 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Qr_34: float or bool: numeric | ON | OFF Limits for QPSK, coding rate 3/4 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Q_1_M_12: float or bool: numeric | ON | OFF Limits for 16-QAM, coding rate 1/2 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Q_1_M_34: float or bool: numeric | ON | OFF Limits for 16-QAM, coding rate 3/4 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Q_6_M_12: float or bool: numeric | ON | OFF Limits for 64-QAM, coding rate 1/2 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Q_6_M_34: float or bool: numeric | ON | OFF Limits for 64-QAM, coding rate 3/4 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_Q_6_M_56: float or bool: numeric | ON | OFF Limits for 64-QAM, coding rate 5/6 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

get_cf_error() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HTOFdm:CFERror
value: float or bool = driver.configure.multiEval.limit.modulation.htOfdm.get_
↪cf_error()
```

Defines and activates an upper limit for the center frequency error (802.11n) .

return

center_freq_error: (float or boolean) numeric | ON | OFF Range: 0 Hz to 100 MHz Additional parameters: OFF | ON (disables | enables the limit check)

get_evm() → EvmStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HTOFdm:EVM
value: EvmStruct = driver.configure.multiEval.limit.modulation.htOfdm.get_evm()
```

Defines and activates upper limits for the error vector magnitude (EVM) of the data carriers (802.11n) .

return
structure: for return value, see the help for EvmStruct structure arguments.

get_evm_pilot() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HTOFdm:EVMPilot
value: float or bool = driver.configure.multiEval.limit.modulation.htOfdm.get_
↪evm_pilot()
```

Defines and activates an upper limit for the error vector magnitude (EVM) of the pilot carriers (802.11n) .

return
evm_pilot: (float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

get_sc_error() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HTOFdm:SCERror
value: float or bool = driver.configure.multiEval.limit.modulation.htOfdm.get_
↪sc_error()
```

Defines and activates an upper limit for the symbol clock error (802.11n) .

return
clock_error: (float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

set_cf_error(*center_freq_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HTOFdm:CFERror
driver.configure.multiEval.limit.modulation.htOfdm.set_cf_error(center_freq_
↪error = 1.0)
```

Defines and activates an upper limit for the center frequency error (802.11n) .

param center_freq_error
(float or boolean) numeric | ON | OFF Range: 0 Hz to 100 MHz Additional parameters: OFF | ON (disables | enables the limit check)

set_evm(*value: EvmStruct*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HTOFdm:EVM
structure = driver.configure.multiEval.limit.modulation.htOfdm.EvmStruct()
structure.Evm_Br_12: float or bool = 1.0
structure.Evm_Qr_12: float or bool = 1.0
```

(continues on next page)

(continued from previous page)

```
structure.Evm_Qr_34: float or bool = 1.0
structure.Evm_Q_1_M_12: float or bool = 1.0
structure.Evm_Q_1_M_34: float or bool = 1.0
structure.Evm_Q_6_M_12: float or bool = 1.0
structure.Evm_Q_6_M_34: float or bool = 1.0
structure.Evm_Q_6_M_56: float or bool = 1.0
driver.configure.multiEval.limit.modulation.ht0fdm.set_evm(value = structure)
```

Defines and activates upper limits for the error vector magnitude (EVM) of the data carriers (802.11n) .

param value
see the help for EvmStruct structure arguments.

set_evm_pilot(*evm_pilot: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HTOFdm:EVMPilot
driver.configure.multiEval.limit.modulation.ht0fdm.set_evm_pilot(evm_pilot = 1.
↪0)
```

Defines and activates an upper limit for the error vector magnitude (EVM) of the pilot carriers (802.11n) .

param evm_pilot
(float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

set_sc_error(*clock_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HTOFdm:SCERror
driver.configure.multiEval.limit.modulation.ht0fdm.set_sc_error(clock_error = 1.
↪0)
```

Defines and activates an upper limit for the symbol clock error (802.11n) .

param clock_error
(float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.modulation.htOfdm.clone()
```

Subgroups

6.1.3.3.1.13 IqOffset

class IqOffsetCls

IqOffset commands group definition. 1 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.modulation.htOfdm.iqOffset.clone()
```

Subgroups

6.1.3.3.1.14 Bw<BandwidthC>

RepCap Settings

```
# Range: Bw5 .. Bw40
rc = driver.configure.multiEval.limit.modulation.htOfdm.iqOffset.bw.repcap_bandwidthC_
↪get()
driver.configure.multiEval.limit.modulation.htOfdm.iqOffset.bw.repcap_bandwidthC_
↪set(repcap.BandwidthC.Bw5)
```

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:HTOFdm:IQOFfset:BW<BW>
```

class BwCls

Bw commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: BandwidthC, default value after init: BandwidthC.Bw5

get(*bandwidthC=BandwidthC.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:HTOFdm:IQOFfset:BW<BW>
value: float or bool = driver.configure.multiEval.limit.modulation.htOfdm.
↪iqOffset.bw.get(bandwidthC = repcap.BandwidthC.Default)
```

Defines and activates an upper limit for the I/Q origin offset, for 802.11n and channel bandwidth <BW>.

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
offset_value: (float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

set(*offset_value: float*, *bandwidthC=BandwidthC.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>

```

class LofdmCls

Lofdm commands group definition. 5 total commands, 0 Subgroups, 5 group commands

class EvmStruct

Structure for setting input parameters. Fields:

- Evm_6_M: float or bool: numeric | ON | OFF Limit for data rate 6 Mbps Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_9_M: float or bool: numeric | ON | OFF Limit for data rate 9 Mbps Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_12_M: float or bool: numeric | ON | OFF Limit for data rate 12 Mbps Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_18_M: float or bool: numeric | ON | OFF Limit for data rate 18 Mbps Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

- Evm_24_M: float or bool: numeric | ON | OFF Limit for data rate 24 Mbps Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_36_M: float or bool: numeric | ON | OFF Limit for data rate 36 Mbps Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_48_M: float or bool: numeric | ON | OFF Limit for data rate 48 Mbps Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_54_M: float or bool: numeric | ON | OFF Limit for data rate 54 Mbps Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

get_cf_error() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:LOFDm:CFERror
value: float or bool = driver.configure.multiEval.limit.modulation.lofdm.get_cf_
↪error()
```

Defines and activates an upper limit for the center frequency error (802.11a/g, OFDM) .

return
center_freq_error: (float or boolean) numeric | ON | OFF Range: 0 Hz to 100 MHz Additional parameters: OFF | ON (disables | enables the limit check)

get_evm() → EvmStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:LOFDm:EVM
value: EvmStruct = driver.configure.multiEval.limit.modulation.lofdm.get_evm()
```

Defines and activates upper limits for the error vector magnitude (EVM) of the data carriers (802.11a/g, OFDM) .

return
structure: for return value, see the help for EvmStruct structure arguments.

get_evm_pilot() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:LOFDm:EVMPilot
value: float or bool = driver.configure.multiEval.limit.modulation.lofdm.get_
↪evm_pilot()
```

Defines and activates an upper limit for the error vector magnitude (EVM) of the pilot carriers (802.11a/g, OFDM) .

return
evm_pilot: (float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

get_iq_offset() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:LOFDm:IQOFfset
value: float or bool = driver.configure.multiEval.limit.modulation.lofdm.get_iq_
↪offset()
```

Defines and activates an upper limit for the I/Q origin offset (802.11a/g, OFDM) .

return
iq_offset: (float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

get_sc_error() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:LOFDm:SCERror
value: float or bool = driver.configure.multiEval.limit.modulation.lofdm.get_sc_
↪error()
```

Defines and activates an upper limit for the symbol clock error (802.11a/g, OFDM) .

return
clock_error: (float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

set_cf_error(*center_freq_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:LOFDm:CFERror
driver.configure.multiEval.limit.modulation.lofdm.set_cf_error(center_freq_
↪error = 1.0)
```

Defines and activates an upper limit for the center frequency error (802.11a/g, OFDM) .

param center_freq_error
(float or boolean) numeric | ON | OFF Range: 0 Hz to 100 MHz Additional parameters: OFF | ON (disables | enables the limit check)

set_evm(*value: EvmStruct*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:LOFDm:EVM
structure = driver.configure.multiEval.limit.modulation.lofdm.EvmStruct()
structure.Evm_6_M: float or bool = 1.0
structure.Evm_9_M: float or bool = 1.0
structure.Evm_12_M: float or bool = 1.0
structure.Evm_18_M: float or bool = 1.0
structure.Evm_24_M: float or bool = 1.0
structure.Evm_36_M: float or bool = 1.0
structure.Evm_48_M: float or bool = 1.0
structure.Evm_54_M: float or bool = 1.0
driver.configure.multiEval.limit.modulation.lofdm.set_evm(value = structure)
```

Defines and activates upper limits for the error vector magnitude (EVM) of the data carriers (802.11a/g, OFDM) .

param value
see the help for EvmStruct structure arguments.

set_evm_pilot(*evm_pilot: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:LOFDm:EVMPilot
driver.configure.multiEval.limit.modulation.lofdm.set_evm_pilot(evm_pilot = 1.0)
```

Defines and activates an upper limit for the error vector magnitude (EVM) of the pilot carriers (802.11a/g, OFDM) .

param evm_pilot
(float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

`set_iq_offset`(*iq_offset: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:LOFDm:IQOFfset
driver.configure.multiEval.limit.modulation.lofdm.set_iq_offset(iq_offset = 1.0)
```

Defines and activates an upper limit for the I/Q origin offset (802.11a/g, OFDM) .

param iq_offset
(float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

`set_sc_error`(*clock_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:LOFDm:SCERror
driver.configure.multiEval.limit.modulation.lofdm.set_sc_error(clock_error = 1.
↪0)
```

Defines and activates an upper limit for the symbol clock error (802.11a/g, OFDM) .

param clock_error
(float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

6.1.3.3.1.16 Pofdm

SCPI Commands :

CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:MODulation:POFDm:SCERror
```

`class PofdmCls`

Pofdm commands group definition. 5 total commands, 0 Subgroups, 5 group commands

`class EvmStruct`

Structure for setting input parameters. Fields:

- Bpsk_12: float or bool: numeric | ON | OFF Limit for data rate BPSK modulation and coding rate 1/2 Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)
- Bpsk_34: float or bool: numeric | ON | OFF Limit for data rate BPSK modulation and coding rate 3/4 Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)
- Qpsk_12: float or bool: numeric | ON | OFF Limit for data rate QPSK modulation and coding rate 1/2 Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)

- Qpsk_34: float or bool: numeric | ON | OFF Limit for data rate QPSK modulation and coding rate 3/4 Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)
- Q_16_Am_12: float or bool: numeric | ON | OFF Limit for data rate 16-QAM modulation and coding rate 1/2 Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)
- Q_16_Am_34: float or bool: numeric | ON | OFF Limit for data rate 16-QAM modulation and coding rate 3/4 Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)
- Q_64_Am_23: float or bool: numeric | ON | OFF Limit for data rate 64-QAM modulation and coding rate 2/3 Additional parameters: OFF | ON (disables | enables the limit check)
- Q_64_Am_34: float or bool: numeric | ON | OFF Limit for data rate 64-QAM modulation and coding rate 3/4 Additional parameters: OFF | ON (disables | enables the limit check)

get_cf_error() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:POFDm:CFERror
value: float or bool = driver.configure.multiEval.limit.modulation.pofdm.get_cf_
↪error()
```

Defines and activates an upper limit for the center frequency error (802.11p) .

return
center_freq_error: (float or boolean) numeric | ON | OFF Range: 0 Hz to 100 MHz Additional parameters: OFF | ON (disables | enables the limit check)

get_evm() → EvmStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:POFDm:EVM
value: EvmStruct = driver.configure.multiEval.limit.modulation.pofdm.get_evm()
```

Defines and activates upper limits for the error vector magnitude (EVM) of the data carriers in 802.11p signals.

return
structure: for return value, see the help for EvmStruct structure arguments.

get_evm_pilot() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:POFDm:EVMPilot
value: float or bool = driver.configure.multiEval.limit.modulation.pofdm.get_
↪evm_pilot()
```

Defines and activates an upper limit for the error vector magnitude (EVM) of 802.11p pilot carriers.

return
evm_pilot: (float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)

get_iq_offset() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:POFDm:IQOFfset
value: float or bool = driver.configure.multiEval.limit.modulation.pofdm.get_iq_
↪offset()
```

Defines and activates an upper limit for the I/Q origin offset of 802.11p signals.

return
iq_offset: (float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)

get_sc_error() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:POFDm:SCERror
value: float or bool = driver.configure.multiEval.limit.modulation.pofdm.get_sc_
↪error()
```

Defines and activates an upper limit for the symbol clock error (802.11p) .

return
clock_error: (float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

set_cf_error(*center_freq_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:POFDm:CFERror
driver.configure.multiEval.limit.modulation.pofdm.set_cf_error(center_freq_
↪error = 1.0)
```

Defines and activates an upper limit for the center frequency error (802.11p) .

param center_freq_error
(float or boolean) numeric | ON | OFF Range: 0 Hz to 100 MHz Additional parameters: OFF | ON (disables | enables the limit check)

set_evm(*value: EvmStruct*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:POFDm:EVM
structure = driver.configure.multiEval.limit.modulation.pofdm.EvmStruct()
structure.Bpsk_12: float or bool = 1.0
structure.Bpsk_34: float or bool = 1.0

structure.Q_16_Am_34: float or bool = 1.0
structure.Q_64_Am_23: float or bool = 1.0
structure.Q_64_Am_34: float or bool = 1.0
driver.configure.multiEval.limit.modulation.pofdm.set_evm(value = structure)
```

Defines and activates upper limits for the error vector magnitude (EVM) of the data carriers in 802.11p signals.

param value
see the help for EvmStruct structure arguments.

set_evm_pilot(*evm_pilot: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:POFDm:EVMPilot
driver.configure.multiEval.limit.modulation.pofdm.set_evm_pilot(evm_pilot = 1.0)
```

Defines and activates an upper limit for the error vector magnitude (EVM) of 802.11p pilot carriers.

param evm_pilot
(float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)

set_iq_offset(*iq_offset: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:POFDm:IQOFfset
driver.configure.multiEval.limit.modulation.pofdm.set_iq_offset(iq_offset = 1.0)
```

Defines and activates an upper limit for the I/Q origin offset of 802.11p signals.

param iq_offset
(float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB Additional parameters: OFF | ON (disables | enables the limit check)

set_sc_error(*clock_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:POFDm:SCERror
driver.configure.multiEval.limit.modulation.pofdm.set_sc_error(clock_error = 1.
↪0)
```

Defines and activates an upper limit for the symbol clock error (802.11p) .

param clock_error
(float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

- Evm_1024_Qam_34: float or bool: Optional setting parameter. numeric | ON | OFF Limits for 1024-QAM, coding rate 3/4 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)
- Evm_1024_Qam_56: float or bool: Optional setting parameter. numeric | ON | OFF Limits for 1024-QAM, coding rate 5/6 Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

get_cf_error() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:VHTofdm:CFERror
value: float or bool = driver.configure.multiEval.limit.modulation.vht0fdm.get_
↪cf_error()
```

Defines and activates an upper limit for the center frequency error in 802.11ac signals.

return
center_freq_error: (float or boolean) numeric | ON | OFF Note that the reset value is identical for all standards Range: 0 Hz to 100 MHz Additional parameters: OFF | ON (disables | enables the limit check)

get_evm_all() → EvmAllStruct

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:VHTofdm:EVMall
value: EvmAllStruct = driver.configure.multiEval.limit.modulation.vht0fdm.get_
↪evm_all()
```

Defines and activates upper limits for the error vector magnitude (EVM) of 802.11ac data carriers.

return
structure: for return value, see the help for EvmAllStruct structure arguments.

get_evm_pilot() → float

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:VHTofdm:EVMPilot
value: float or bool = driver.configure.multiEval.limit.modulation.vht0fdm.get_
↪evm_pilot()
```

Defines and activates an upper limit for the error vector magnitude (EVM) of the pilot carriers in 802.11ac signals.

return
evm_pilot: (float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

get_sc_error() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:VHTofdm:SCERror
value: float or bool = driver.configure.multiEval.limit.modulation.vht0fdm.get_
↪sc_error()
```

Defines and activates an upper limit for the symbol clock error in 802.11ac signals.

return
clock_error: (float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

set_cf_error(*center_freq_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:VHTofdm:CFERror
driver.configure.multiEval.limit.modulation.vht0fdm.set_cf_error(center_freq_
↪error = 1.0)
```

Defines and activates an upper limit for the center frequency error in 802.11ac signals.

param center_freq_error
(float or boolean) numeric | ON | OFF Note that the reset value is identical for all standards Range: 0 Hz to 100 MHz Additional parameters: OFF | ON (disables | enables the limit check)

set_evm_all(*value: EvmAllStruct*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:VHTofdm:EVMall
structure = driver.configure.multiEval.limit.modulation.vht0fdm.EvmAllStruct()
structure.Evm_Br_12: float or bool = 1.0
structure.Evm_Qr_12: float or bool = 1.0
structure.Evm_Qr_34: float or bool = 1.0

structure.Evm_1024_Qam_34: float or bool = 1.0
structure.Evm_1024_Qam_56: float or bool = 1.0
driver.configure.multiEval.limit.modulation.vht0fdm.set_evm_all(value =␣
↪structure)
```

Defines and activates upper limits for the error vector magnitude (EVM) of 802.11ac data carriers.

param value
see the help for EvmAllStruct structure arguments.

set_evm_pilot(*evm_pilot: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>
↪:MEValuation:LIMit:MODulation:VHTofdm:EVMPilot
driver.configure.multiEval.limit.modulation.vht0fdm.set_evm_pilot(evm_pilot = 1.
↪0)
```

Defines and activates an upper limit for the error vector magnitude (EVM) of the pilot carriers in 802.11ac signals.

param evm_pilot
(float or boolean) numeric | ON | OFF Range: -100 dB to 0 dB, Unit: dB Additional parameters: OFF | ON (disables | enables the limit check)

set_sc_error(*clock_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:MODulation:VHTofdm:SCERror
driver.configure.multiEval.limit.modulation.vht0fdm.set_sc_error(clock_error =␣
↪1.0)
```

Defines and activates an upper limit for the symbol clock error in 802.11ac signals.

param clock_error
(float or boolean) numeric | ON | OFF Range: 0 ppm to 100 ppm, Unit: ppm Additional parameters: OFF | ON (disables | enables the limit check)

6.1.3.3.2 PowerVsTime

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:REDGe
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:FEDGe
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:TERRor
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:TEDistrib
```

class PowerVsTimeCls

PowerVsTime commands group definition. 4 total commands, 0 Subgroups, 4 group commands

get_falling_edge() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:FEDGe
value: float or bool = driver.configure.multiEval.limit.powerVsTime.get_falling_
↪edge()
```

Sets the upper limit for the fall time (transmit power-down ramp) of a DSSS signal.

return
falling_limit: (float or boolean) numeric | ON | OFF Range: 0 s to 5E-6 s Additional parameters: OFF | ON (disables the limit check | enables the limit check using the previous limit values)

get_rising_edge() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:REDGe
value: float or bool = driver.configure.multiEval.limit.powerVsTime.get_rising_
↪edge()
```

Sets the upper limit for the rise time (transmit power-on ramp) of a DSSS signal.

return
rising_limit: (float or boolean) numeric | ON | OFF Range: 0 s to 5E-6 s Additional

parameters: OFF | ON (disables the limit check | enables the limit check using the previous limit values)

get_te_distribution() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:TEDistrib
value: float or bool = driver.configure.multiEval.limit.powerVsTime.get_te_
↪distribution()
```

Configure the limit of timing error distribution for power vs time measurements for OFDM standards. Exceeding the limit has no impact on the stop 'On Limit Failure' condition or out-of-tolerance counter.

return
te_percentage: (float or boolean) numeric | ON | OFF Unit: % Additional parameters: OFF | ON (disables | enables the limit check)

get_terror() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:TERRor
value: float or bool = driver.configure.multiEval.limit.powerVsTime.get_terror()
```

Sets the upper limit for timing error for OFDM standards.

return
timing_error: (float or boolean) numeric | ON | OFF Range: 0 s to 100E-6 s Additional parameters: OFF | ON (disables the limit check | enables the limit check using the previous limit values)

set_falling_edge(*falling_limit: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:FEDGe
driver.configure.multiEval.limit.powerVsTime.set_falling_edge(falling_limit = 1.
↪0)
```

Sets the upper limit for the fall time (transmit power-down ramp) of a DSSS signal.

param falling_limit
(float or boolean) numeric | ON | OFF Range: 0 s to 5E-6 s Additional parameters: OFF | ON (disables the limit check | enables the limit check using the previous limit values)

set_rising_edge(*rising_limit: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:REDGe
driver.configure.multiEval.limit.powerVsTime.set_rising_edge(rising_limit = 1.0)
```

Sets the upper limit for the rise time (transmit power-on ramp) of a DSSS signal.

param rising_limit
(float or boolean) numeric | ON | OFF Range: 0 s to 5E-6 s Additional parameters: OFF | ON (disables the limit check | enables the limit check using the previous limit values)

set_te_distribution(*te_percentage: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:TEDistrib
driver.configure.multiEval.limit.powerVsTime.set_te_distribution(te_percentage␣
↪= 1.0)
```

Configure the limit of timing error distribution for power vs time measurements for OFDM standards. Exceeding the limit has no impact on the stop 'On Limit Failure' condition or out-of-tolerance counter.

param te_percentage
(float or boolean) numeric | ON | OFF Unit: % Additional parameters: OFF | ON (disables | enables the limit check)

`set_terror`(*timing_error: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:PVTime:TERRor
driver.configure.multiEval.limit.powerVsTime.set_terror(timing_error = 1.0)
```

Sets the upper limit for timing error for OFDM standards.

param timing_error
(float or boolean) numeric | ON | OFF Range: 0 s to 100E-6 s Additional parameters: OFF | ON (disables the limit check | enables the limit check using the previous limit values)

driver.configure.multiEval.limit.spectrFlatness.heOfdm.bw.enable.set(enable =␣
↪False, bandwidthD = repcap.BandwidthD.Default)
```

Enables or disables the spectrum flatness limit check for 802.11ax signals with the specified <bandwidth>.

param enable
OFF | ON

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

6.1.3.3.3.9 Lower

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:HEOFdm:BW<bandwidth>
↪:LOWer
```

class LowerCls

Lower commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class LowerStruct

Response structure. Fields:

- Center: float: numeric Range: -20 dB to 4 dB, Unit: dB
- Side: float: numeric Range: -20 dB to 4 dB, Unit: dB

get(*bandwidthD=BandwidthD.Default*) → LowerStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:HEOFdm:BW<bandwidth>:LOWer
value: LowerStruct = driver.configure.multiEval.limit.spectrFlatness.heOfdm.bw.
↪lower.get(bandwidthD = repcap.BandwidthD.Default)
```

Defines the lower limits for the spectrum flatness of the center subcarriers and the side subcarriers for 802.11ax signals with the specified <bandwidth>. The lower limits must be smaller than the upper limit.

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

return
structure: for return value, see the help for LowerStruct structure arguments.

set(*center: float*, *side: float*, *bandwidthD=BandwidthD.Default*) → None

value: float = driver.configure.multiEval.limit.spectrFlatness.heOfdm.bw.upper.
↪get(bandwidthD = repcap.BandwidthD.Default)
```

Defines the upper limit for the spectrum flatness of 802.11ax signals with the specified <bandwidth>. The upper limit must be larger than the lower limits.

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

return
upper: numeric Range: -4 dB to 20 dB, Unit: dB

set(*upper: float*, *bandwidthD=BandwidthD.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:HEOFdm:BW<bandwidth>:UPPer
driver.configure.multiEval.limit.spectrFlatness.heOfdm.bw.upper.set(upper = 1.0,
↪ bandwidthD = repcap.BandwidthD.Default)
```

Defines the upper limit for the spectrum flatness of 802.11ax signals with the specified <bandwidth>. The upper limit must be larger than the lower limits.

param upper
numeric Range: -4 dB to 20 dB, Unit: dB

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

6.1.3.3.3.11 HtOfdm

class HtOfdmCls

HtOfdm commands group definition. 3 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.spectrFlatness.htOfdm.clone()
```

Subgroups

6.1.3.3.3.12 Bw<BandwidthC>

RepCap Settings

```
# Range: Bw5 .. Bw40
rc = driver.configure.multiEval.limit.spectrFlatness.htOfdm.bw.repcap_bandwidthC_get()
driver.configure.multiEval.limit.spectrFlatness.htOfdm.bw.repcap_bandwidthC_set(repcap.
↪BandwidthC.Bw5)
```

class BwCls

Bw commands group definition. 3 total commands, 3 Subgroups, 0 group commands Repeated Capability: BandwidthC, default value after init: BandwidthC.Bw5

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.spectrFlatness.htOfdm.bw.clone()
```

Subgroups

6.1.3.3.3.13 Enable

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:HTOFdm:BW<bandwidth>
↪:ENABle
```

class EnableCls

Enable commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthC=BandwidthC.Default*) → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:HTOFdm:BW<bandwidth>:ENABle
value: bool = driver.configure.multiEval.limit.spectrFlatness.htOfdm.bw.enable.
↪get(bandwidthC = repcap.BandwidthC.Default)
```

Enables or disables the spectrum flatness limit check for 802.11n signals with the specified <bandwidth>.

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
enable: OFF | ON

set(*enable: bool*, *bandwidthC=BandwidthC.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:HTOFdm:BW<bandwidth>:ENABle
driver.configure.multiEval.limit.spectrFlatness.htOfdm.bw.enable.set(enable =␣
↪False, bandwidthC = repcap.BandwidthC.Default)
```

Enables or disables the spectrum flatness limit check for 802.11n signals with the specified <bandwidth>.

param enable
OFF | ON

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.3.14 Lower

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:HTOFdm:BW<bandwidth>
↪:LOWer
```

class LowerCls

Lower commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class LowerStruct

Response structure. Fields:

- Center: float: numeric Range: -20 dB to 4 dB, Unit: dB
- Side: float: numeric Range: -20 dB to 4 dB, Unit: dB

get(*bandwidthC=BandwidthC.Default*) → LowerStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:HTOFdm:BW<bandwidth>:LOWer
value: LowerStruct = driver.configure.multiEval.limit.spectrFlatness.htOfdm.bw.
↪lower.get(bandwidthC = repcap.BandwidthC.Default)
```

Defines lower limits for the spectrum flatness of the center subcarriers and the side subcarriers for 802.11n signals with the specified <bandwidth>. The lower limits must be smaller than the upper limit.

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
structure: for return value, see the help for LowerStruct structure arguments.

set(*center: float*, *side: float*, *bandwidthC=BandwidthC.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:HTOFdm:BW<bandwidth>:LOWer
driver.configure.multiEval.limit.spectrFlatness.htOfdm.bw.lower.set(center = 1.
↪0, side = 1.0, bandwidthC = repcap.BandwidthC.Default)
```

Defines lower limits for the spectrum flatness of the center subcarriers and the side subcarriers for 802.11n signals with the specified <bandwidth>. The lower limits must be smaller than the upper limit.

param center
numeric Range: -20 dB to 4 dB, Unit: dB

param side
numeric Range: -20 dB to 4 dB, Unit: dB

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.3.15 Upper

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:HTOFdm:BW<bandwidth>
↪:UPPer
```

class UpperCls

Upper commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthC=BandwidthC.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:HTOFdm:BW<bandwidth>:UPPer
value: float = driver.configure.multiEval.limit.spectrFlatness.htOfdm.bw.upper.
↪get(bandwidthC = repcap.BandwidthC.Default)
```

Defines an upper limit for the spectrum flatness of 802.11n signals with the specified <bandwidth>. The upper limit must be larger than the lower limits.

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
upper: numeric Range: -4 dB to 20 dB, Unit: dB

`set`(*upper: float*, *bandwidthC=BandwidthC.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:HTOFdm:BW<bandwidth>:UPPer
driver.configure.multiEval.limit.spectrFlatness.htOfdm.bw.upper.set(upper = 1.0,
↪ bandwidthC = repcap.BandwidthC.Default)
```

Defines an upper limit for the spectrum flatness of 802.11n signals with the specified <bandwidth>. The upper limit must be larger than the lower limits.

param upper
numeric Range: -4 dB to 20 dB, Unit: dB

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.3.16 Lofdm

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:LOFDm:ENABle
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:LOFDm:UPPer
```

`class LofdmCls`

Lofdm commands group definition. 3 total commands, 1 Subgroups, 2 group commands

`get_enable`() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:LOFDm:ENABle
value: bool = driver.configure.multiEval.limit.spectrFlatness.lofdm.get_enable()
```

Enables or disables the spectrum flatness limit check for 802.11a/g OFDM signals.

return
enable: OFF | ON

`get_upper`() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:LOFDm:UPPer
value: float = driver.configure.multiEval.limit.spectrFlatness.lofdm.get_upper()
```

Defines an upper limit for the spectrum flatness of 802.11a/g OFDM signals. The upper limit must be larger than the lower limits.

return
upper: numeric Range: -4 dB to 20 dB

set_enable(*enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:LOFDm:ENABle
driver.configure.multiEval.limit.spectrFlatness.lofdm.set_enable(enable = False)
```

Enables or disables the spectrum flatness limit check for 802.11a/g OFDM signals.

param enable
OFF | ON

set_upper(*upper: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:LOFDm:UPPer
driver.configure.multiEval.limit.spectrFlatness.lofdm.set_upper(upper = 1.0)
```

Defines an upper limit for the spectrum flatness of 802.11a/g OFDM signals. The upper limit must be larger than the lower limits.

param upper
numeric Range: -4 dB to 20 dB

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.spectrFlatness.lofdm.clone()
```

Subgroups

6.1.3.3.3.17 Lower

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:LOFDm:LOWer
```

class LowerCls

Lower commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class LowerStruct

Response structure. Fields:

- Center: float: numeric Range: -20 dB to 4 dB
- Side: float: numeric Range: -20 dB to 4 dB

get() → LowerStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:LOFDm:LOWer
value: LowerStruct = driver.configure.multiEval.limit.spectrFlatness.lofdm.
↪lower.get()
```

Defines lower limits for the spectrum flatness of the center subcarriers and the side subcarriers of 802.11a/g OFDM signals. The lower limits must be smaller than the upper limit.

return
structure: for return value, see the help for LowerStruct structure arguments.

set(*center: float*, *side: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:LOFDm:LOWer
driver.configure.multiEval.limit.spectrFlatness.lofdm.lower.set(center = 1.0,␣
↪side = 1.0)
```

Defines lower limits for the spectrum flatness of the center subcarriers and the side subcarriers of 802.11a/g OFDM signals. The lower limits must be smaller than the upper limit.

param center
numeric Range: -20 dB to 4 dB

param side
numeric Range: -20 dB to 4 dB

6.1.3.3.3.18 Pofdm

class PofdmCls

Pofdm commands group definition. 3 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.spectrFlatness.pofdm.clone()
```

Subgroups

6.1.3.3.3.19 Bw<BandwidthB>

driver.configure.multiEval.limit.spectrFlatness.pofdm.bw.repcap_bandwidthB_set(repcap.
↪BandwidthB.Bw5)
```

class BwCls

Bw commands group definition. 3 total commands, 3 Subgroups, 0 group commands Repeated Capability: BandwidthB, default value after init: BandwidthB.Bw5

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.spectrFlatness.pofdm.bw.clone()
```

Subgroups

6.1.3.3.3.20 Enable

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:POFDm:BW<bandwidth>
↪:ENABle
```

class EnableCls

Enable commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthB=BandwidthB.Default*) → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:POFDm:BW<bandwidth>:ENABle
value: bool = driver.configure.multiEval.limit.spectrFlatness.pofdm.bw.enable.
↪get(bandwidthB = repcap.BandwidthB.Default)
```

Enables or disables the spectrum flatness limit check for 802.11p OFDM signals with the specified <bandwidth>.

param bandwidthB
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
enable: OFF | ON

set(*enable: bool*, *bandwidthB=BandwidthB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:POFDm:BW<bandwidth>:ENABle
driver.configure.multiEval.limit.spectrFlatness.pofdm.bw.enable.set(enable =␣
↪False, bandwidthB = repcap.BandwidthB.Default)
```

Enables or disables the spectrum flatness limit check for 802.11p OFDM signals with the specified <bandwidth>.

param enable
OFF | ON

param bandwidthB
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.3.21 Lower

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:POFDm:BW<bandwidth>
↪:LOWer
```

class LowerCls

Lower commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class LowerStruct

Response structure. Fields:

- Center: float: numeric Range: -20 dB to 4 dB
- Side: float: numeric Range: -20 dB to 4 dB

get(*bandwidthB=BandwidthB.Default*) → LowerStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:POFDm:BW<bandwidth>:LOWer
value: LowerStruct = driver.configure.multiEval.limit.spectrFlatness.pofdm.bw.
↪lower.get(bandwidthB = repcap.BandwidthB.Default)
```

Defines lower limits for the spectrum flatness of the center subcarriers and the side subcarriers of 802.11p OFDM signals with the specified <bandwidth>. The lower limits must be smaller than the upper limit.

param bandwidthB
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
structure: for return value, see the help for LowerStruct structure arguments.

set(*center: float*, *side: float*, *bandwidthB=BandwidthB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:POFDm:BW<bandwidth>:LOWer
driver.configure.multiEval.limit.spectrFlatness.pofdm.bw.lower.set(center = 1.0,
↪ side = 1.0, bandwidthB = repcap.BandwidthB.Default)
```

Defines lower limits for the spectrum flatness of the center subcarriers and the side subcarriers of 802.11p OFDM signals with the specified <bandwidth>. The lower limits must be smaller than the upper limit.

param center
numeric Range: -20 dB to 4 dB

param side
numeric Range: -20 dB to 4 dB

param bandwidthB
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.3.22 Upper

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:POFDm:BW<bandwidth>
↪:UPPer
```

class UpperCls

Upper commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthB=BandwidthB.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:POFDm:BW<bandwidth>:UPPer
value: float = driver.configure.multiEval.limit.spectrFlatness.pofdm.bw.upper.
↪get(bandwidthB = repcap.BandwidthB.Default)
```

Defines an upper limit for the spectrum flatness of 802.11p OFDM signals with the specified <bandwidth>. The upper limit must be larger than the lower limits.

param bandwidthB
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
upper: numeric Range: -4 dB to 20 dB

set(*upper: float*, *bandwidthB=BandwidthB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:POFDm:BW<bandwidth>:UPPer
driver.configure.multiEval.limit.spectrFlatness.pofdm.bw.upper.set(upper = 1.0,␣
↪bandwidthB = repcap.BandwidthB.Default)
```

Defines an upper limit for the spectrum flatness of 802.11p OFDM signals with the specified <bandwidth>. The upper limit must be larger than the lower limits.

param upper
numeric Range: -4 dB to 20 dB

param bandwidthB
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.3.23 VhtOfdm

class VhtOfdmCls

VhtOfdm commands group definition. 3 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.spectrFlatness.vht0fdm.clone()
```

Subgroups

6.1.3.3.3.24 Bw<BandwidthE>

CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:VHTofdm:BW<bandwidth>
↪:ENABle
```

class EnableCls

Enable commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthE=BandwidthE.Default*) → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:VHTofdm:BW<bandwidth>:ENABle
value: bool = driver.configure.multiEval.limit.spectrFlatness.vht0fdm.bw.enable.
↪get(bandwidthE = repcap.BandwidthE.Default)
```

Enables or disables the spectrum flatness limit check for 802.11ac signals with the specified <bandwidth>.

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
enable: OFF | ON

set(*enable: bool*, *bandwidthE=BandwidthE.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:VHTofdm:BW<bandwidth>:ENABle
driver.configure.multiEval.limit.spectrFlatness.vht0fdm.bw.enable.set(enable =␣
↪False, bandwidthE = repcap.BandwidthE.Default)
```

Enables or disables the spectrum flatness limit check for 802.11ac signals with the specified <bandwidth>.

param enable
OFF | ON

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.3.26 Lower

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:VHTofdm:BW<bandwidth>
↪:LOWer
```

class LowerCls

Lower commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class LowerStruct

Response structure. Fields:

- Center: float: numeric Range: -20 dB to 4 dB
- Side: float: numeric Range: -20 dB to 4 dB

get(*bandwidthE=BandwidthE.Default*) → LowerStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:VHTofdm:BW<bandwidth>:LOWer
value: LowerStruct = driver.configure.multiEval.limit.spectrFlatness.vht0fdm.bw.
↪lower.get(bandwidthE = repcap.BandwidthE.Default)
```

Defines lower limits for the spectrum flatness of the center subcarriers and the side subcarriers for 802.11ac signals with the specified <bandwidth>. The lower limits must be smaller than the upper limit.

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
structure: for return value, see the help for LowerStruct structure arguments.

set(*center: float*, *side: float*, *bandwidthE=BandwidthE.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:VHTofdm:BW<bandwidth>:LOWer
driver.configure.multiEval.limit.spectrFlatness.vht0fdm.bw.lower.set(center = 1.
↪0, side = 1.0, bandwidthE = repcap.BandwidthE.Default)
```

Defines lower limits for the spectrum flatness of the center subcarriers and the side subcarriers for 802.11ac signals with the specified <bandwidth>. The lower limits must be smaller than the upper limit.

param center
numeric Range: -20 dB to 4 dB

param side
numeric Range: -20 dB to 4 dB

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.3.27 Upper

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:SFLatness:VHTofdm:BW<bandwidth>
↪:UPPer
```

class UpperCls

Upper commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthE=BandwidthE.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:VHTofdm:BW<bandwidth>:UPPer
value: float = driver.configure.multiEval.limit.spectrFlatness.vht0fdm.bw.upper.
↪get(bandwidthE = repcap.BandwidthE.Default)
```

Defines an upper limit for the spectrum flatness of 802.11ac signals with the specified <bandwidth>. The upper limit must be larger than the lower limits.

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
upper: numeric Range: -4 dB to 20 dB

set(*upper: float*, *bandwidthE=BandwidthE.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:SFLatness:VHTofdm:BW<bandwidth>:UPPer
driver.configure.multiEval.limit.spectrFlatness.vht0fdm.bw.upper.set(upper = 1.
↪0, bandwidthE = repcap.BandwidthE.Default)
```

Defines an upper limit for the spectrum flatness of 802.11ac signals with the specified <bandwidth>. The upper limit must be larger than the lower limits.

param upper
numeric Range: -4 dB to 20 dB

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.4 TsMask

class TsMaskCls

TsMask commands group definition. 54 total commands, 7 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.tsMask.clone()
```

Subgroups

6.1.3.3.4.1 Dsss

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:DSSS:ENABle
```

class DsssCls

Dsss commands group definition. 3 total commands, 1 Subgroups, 1 group commands

get_enable() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:TSMask:DSSS:ENABle
value: bool = driver.configure.multiEval.limit.tsMask.dsss.get_enable()
```

Activates or deactivates the transmit spectrum mask (transmission scheme DSSS) , i.e. the limit check.

return
spe_lim_enable: OFF | ON

set_enable(*spe_lim_enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:TSMask:DSSS:ENABle
driver.configure.multiEval.limit.tsMask.dsss.set_enable(spe_lim_enable = False)
```

Activates or deactivates the transmit spectrum mask (transmission scheme DSSS) , i.e. the limit check.

param spe_lim_enable
OFF | ON

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.tsMask.dsss.clone()
```

Subgroups

6.1.3.3.4.2 Y

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:DSSS:Y:AB

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW
↪<bandwidth>:ENABle
value: bool = driver.configure.multiEval.limit.tsMask.heOfdm.bw.enable.
↪get(bandwidthD = repcap.BandwidthD.Default)
```

Enables or disables the transmit spectrum mask for 802.11ax signals with the specified <bandwidth>, i.e. activates or deactivates the corresponding limit checks.

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

return
tsm_lim_enable: OFF | ON

set(*tsm_lim_enable: bool*, *bandwidthD=BandwidthD.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW
↪<bandwidth>:ENABle
driver.configure.multiEval.limit.tsMask.heOfdm.bw.enable.set(tsm_lim_enable =␣
↪False, bandwidthD = repcap.BandwidthD.Default)
```

Enables or disables the transmit spectrum mask for 802.11ax signals with the specified <bandwidth>, i.e. activates or deactivates the corresponding limit checks.

param tsm_lim_enable
OFF | ON

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

6.1.3.3.4.16 Y

class YCls

Y commands group definition. 4 total commands, 4 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.tsMask.heOfdm.bw.y.clone()
```

Subgroups

6.1.3.3.4.17 A

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW<bandwidth>:Y:A
```

class ACls

A commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthD=BandwidthD.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW
↪<bandwidth>:Y:A
value: float = driver.configure.multiEval.limit.tsMask.heOfdm.bw.y.a.
↪get(bandwidthD = repcap.BandwidthD.Default)
```

Defines the relative spectral density limit for point A (frequency offset: 2*bandwidth) on the transmit spectrum mask for 802.11ax signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

return
tsm_lim_yrel_lev_a: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_a: float*, *bandwidthD=BandwidthD.Default*) → None

```

driver.configure.multiEval.limit.tsMask.heOfdm.bw.y.a.set(tsm_lim_yrel_lev_a =␣
↪1.0, bandwidthD = repcap.BandwidthD.Default)
```

Defines the relative spectral density limit for point A (frequency offset: 2*bandwidth) on the transmit spectrum mask for 802.11ax signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_a
numeric Range: -90 dB to 10 dB

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

6.1.3.3.4.18 B

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW<bandwidth>:Y:B
```

class BCls

B commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthD=BandwidthD.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW
↪<bandwidth>:Y:B
value: float = driver.configure.multiEval.limit.tsMask.heOfdm.bw.y.b.
↪get(bandwidthD = repcap.BandwidthD.Default)
```

Defines the relative spectral density limit for point B (frequency offset: 3/2*bandwidth) on the transmit spectrum mask for 802.11ax signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

return
tsm_lim_yrel_lev_b: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_b: float*, *bandwidthD=BandwidthD.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW
↪<bandwidth>:Y:B
driver.configure.multiEval.limit.tsMask.heOfdm.bw.y.b.set(tsm_lim_yrel_lev_b =␣
↪1.0, bandwidthD = repcap.BandwidthD.Default)
```

Defines the relative spectral density limit for point B (frequency offset: 3/2*bandwidth) on the transmit spectrum mask for 802.11ax signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_b
numeric Range: -90 dB to 10 dB

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

6.1.3.3.4.19 C

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW<bandwidth>:Y:C
```

class CCls

C commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthD=BandwidthD.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW
↪<bandwidth>:Y:C
value: float = driver.configure.multiEval.limit.tsMask.heOfdm.bw.y.c.
↪get(bandwidthD = repcap.BandwidthD.Default)
```

Defines the relative spectral density limit for point C (frequency offset: 1*bandwidth) on the transmit spectrum mask for 802.11ax signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

return
tsm_lim_yrel_lev_c: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_c: float*, *bandwidthD=BandwidthD.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW
↪<bandwidth>:Y:C
driver.configure.multiEval.limit.tsMask.heOfdm.bw.y.c.set(tsm_lim_yrel_lev_c =␣
↪1.0, bandwidthD = repcap.BandwidthD.Default)
```

Defines the relative spectral density limit for point C (frequency offset: 1*bandwidth) on the transmit spectrum mask for 802.11ax signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_c
numeric Range: -90 dB to 10 dB

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

6.1.3.3.4.20 D

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW<bandwidth>:Y:D
```

class DCls

D commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthD=BandwidthD.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HEOFdm:BW
↪<bandwidth>:Y:D
value: float = driver.configure.multiEval.limit.tsMask.heOfdm.bw.y.d.
↪get(bandwidthD = repcap.BandwidthD.Default)
```

Defines the relative spectral density limit for point D (center frequency offset: 1/2*bandwidth + 1 MHz) on the transmit spectrum mask for 802.11ax signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthD
optional repeated capability selector. Default value: Bw20 (settable in the interface 'Bw')

return
tsm_lim_yrel_lev_d: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_d: float*, *bandwidthD=BandwidthD.Default*) → None

```

↪<bandwidth>:BAND<band>:Y:A
driver.configure.multiEval.limit.tsMask.htOfdm.bw.band.y.a.set(tsm_lim_yrel_lev_
↪a = 1.0, bandwidthC = repcap.BandwidthC.Default, band = repcap.Band.Default)
```

Defines the relative spectral density limit for point A (frequency offset: 2*bandwidth) on the transmit spectrum mask for 802.11n signals with the specified <bandwidth> and the selected <band>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_a
numeric Range: -90 dB to 10 dB

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

param band
optional repeated capability selector. Default value: Nr2 (settable in the interface 'Band')

6.1.3.3.4.27 B

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW<bandwidth>:BAND
↪<band>:Y:B
```

class BCls

B commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthC=BandwidthC.Default*, *band=Band.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW
↪<bandwidth>:BAND<band>:Y:B
value: float = driver.configure.multiEval.limit.tsMask.htOfdm.bw.band.y.b.
↪get(bandwidthC = repcap.BandwidthC.Default, band = repcap.Band.Default)
```

Defines the relative spectral density limit for point B (frequency offset: 3/2*bandwidth) on the transmit spectrum mask for 802.11n signals with the specified <bandwidth> and the selected <band>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

param band
optional repeated capability selector. Default value: Nr2 (settable in the interface 'Band')

return
tsm_lim_yrel_lev_b: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_b: float*, *bandwidthC=BandwidthC.Default*, *band=Band.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW
↪<bandwidth>:BAND<band>:Y:B
driver.configure.multiEval.limit.tsMask.htOfdm.bw.band.y.b.set(tsm_lim_yrel_lev_
↪b = 1.0, bandwidthC = repcap.BandwidthC.Default, band = repcap.Band.Default)
```

Defines the relative spectral density limit for point B (frequency offset: 3/2*bandwidth) on the transmit spectrum mask for 802.11n signals with the specified <bandwidth> and the selected <band>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_b
numeric Range: -90 dB to 10 dB

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

param band
optional repeated capability selector. Default value: Nr2 (settable in the interface 'Band')

6.1.3.3.4.28 C

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW<bandwidth>:BAND
↪<band>:Y:C
```

class CCls

C commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthC=BandwidthC.Default*, *band=Band.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW
↪<bandwidth>:BAND<band>:Y:C
value: float = driver.configure.multiEval.limit.tsMask.htOfdm.bw.band.y.c.
↪get(bandwidthC = repcap.BandwidthC.Default, band = repcap.Band.Default)
```

Defines the relative spectral density limit for point C (frequency offset: 1*bandwidth) on the transmit spectrum mask for 802.11n signals with the specified <bandwidth> and the selected <band>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

param band
optional repeated capability selector. Default value: Nr2 (settable in the interface 'Band')

return
tsm_lim_yrel_lev_c: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_c: float*, *bandwidthC=BandwidthC.Default*, *band=Band.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW
↪<bandwidth>:BAND<band>:Y:C
driver.configure.multiEval.limit.tsMask.htOfdm.bw.band.y.c.set(tsm_lim_yrel_lev_
↪c = 1.0, bandwidthC = repcap.BandwidthC.Default, band = repcap.Band.Default)
```

Defines the relative spectral density limit for point C (frequency offset: 1*bandwidth) on the transmit spectrum mask for 802.11n signals with the specified <bandwidth> and the selected <band>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_c
numeric Range: -90 dB to 10 dB

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

param band
optional repeated capability selector. Default value: Nr2 (settable in the interface 'Band')

6.1.3.3.4.29 D

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW<bandwidth>:BAND
↪<band>:Y:D
```

class DCls

D commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthC=BandwidthC.Default*, *band=Band.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW
↪<bandwidth>:BAND<band>:Y:D
value: float = driver.configure.multiEval.limit.tsMask.htOfdm.bw.band.y.d.
↪get(bandwidthC = repcap.BandwidthC.Default, band = repcap.Band.Default)
```

Defines the relative spectral density limit for point D (frequency offset: 1/2*bandwidth + 1 MHz) on the transmit spectrum mask for 802.11n signals with the specified <bandwidth> and the selected <band>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

param band
optional repeated capability selector. Default value: Nr2 (settable in the interface 'Band')

return
tsm_lim_yrel_lev_d: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_d: float*, *bandwidthC=BandwidthC.Default*, *band=Band.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW
↪<bandwidth>:BAND<band>:Y:D
driver.configure.multiEval.limit.tsMask.htOfdm.bw.band.y.d.set(tsm_lim_yrel_lev_
↪d = 1.0, bandwidthC = repcap.BandwidthC.Default, band = repcap.Band.Default)
```

Defines the relative spectral density limit for point D (frequency offset: 1/2*bandwidth + 1 MHz) on the transmit spectrum mask for 802.11n signals with the specified <bandwidth> and the selected <band>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_d
numeric Range: -90 dB to 10 dB

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

param band
optional repeated capability selector. Default value: Nr2 (settable in the interface 'Band')

6.1.3.3.4.30 Enable

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW<bandwidth>:ENABle
```

class EnableCls

Enable commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthC=BandwidthC.Default*) → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW
↪<bandwidth>:ENABle
value: bool = driver.configure.multiEval.limit.tsMask.htOfdm.bw.enable.
↪get(bandwidthC = repcap.BandwidthC.Default)
```

Enables or disables the transmit spectrum mask for 802.11n signals with the specified <bandwidth>, i.e. activates or deactivates the corresponding limit check.

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
tsm_lim_enable: OFF | ON

set(*tsm_lim_enable: bool*, *bandwidthC=BandwidthC.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:HTOFdm:BW
↪<bandwidth>:ENABle
driver.configure.multiEval.limit.tsMask.htOfdm.bw.enable.set(tsm_lim_enable =␣
↪False, bandwidthC = repcap.BandwidthC.Default)
```

Enables or disables the transmit spectrum mask for 802.11n signals with the specified <bandwidth>, i.e. activates or deactivates the corresponding limit check.

param tsm_lim_enable
OFF | ON

param bandwidthC
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.4.31 Lofdm

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:LOFDm:ENABle
```

class LofdmCls

Lofdm commands group definition. 5 total commands, 1 Subgroups, 1 group commands

get_enable() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:TSMask:LOFDm:ENABle
value: bool = driver.configure.multiEval.limit.tsMask.lofdm.get_enable()
```

Activates or deactivates the transmit spectrum mask, i.e. the limit check (802.11a/g, OFDM) .

return
tsm_lim_enable: OFF | ON

set_enable(*tsm_lim_enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>
↪:MEValuation:LIMit:TSMask:LOFDm:ENABle
driver.configure.multiEval.limit.tsMask.lofdm.set_enable(tsm_lim_enable = False)
```

Activates or deactivates the transmit spectrum mask, i.e. the limit check (802.11a/g, OFDM) .

param tsm_lim_enable
OFF | ON

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.tsMask.lofdm.clone()
```

Subgroups

6.1.3.3.4.32 Y

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:LOFDm:Y:A
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:LOFDm:Y:B

Y commands group definition. 6 total commands, 6 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.tsMask.pofdm.bw.absolute.y.clone()
```

Subgroups

6.1.3.3.4.37 A

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW<bandwidth>
↪:ABSolute:Y:A
```

class ACls

A commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthA=BandwidthA.Bw10*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:ABSolute:Y:A
value: float = driver.configure.multiEval.limit.tsMask.pofdm.bw.absolute.y.a.
↪get(bandwidthA = repcap.BandwidthA.Bw10)
```

Defines the Y-value of point A (f = 2 <BW>) on the ETSI ITS absolute emission mask for the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, absolute limits'.

param bandwidthA
optional repeated capability selector. Default value: Bw10

return
tsm_lim_yabs_lev_a: numeric Range: -150 dBm to 30 dBm

set(*tsm_lim_yabs_lev_a: float*, *bandwidthA=BandwidthA.Bw10*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:ABSolute:Y:A
driver.configure.multiEval.limit.tsMask.pofdm.bw.absolute.y.a.set(tsm_lim_yabs_
↪lev_a = 1.0, bandwidthA = repcap.BandwidthA.Bw10)
```

Defines the Y-value of point A (f = 2 <BW>) on the ETSI ITS absolute emission mask for the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, absolute limits'.

param tsm_lim_yabs_lev_a
numeric Range: -150 dBm to 30 dBm

param bandwidthA
optional repeated capability selector. Default value: Bw10

6.1.3.3.4.38 B

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW<bandwidth>
↪:ABSolute:Y:B
```

class BCls

B commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthA=BandwidthA.Bw10*) → float

driver.configure.multiEval.limit.tsMask.pofdm.bw.absolute.y.c.set(tsm_lim_yabs_
↪lev_c = 1.0, bandwidthA = repcap.BandwidthA.Bw10)
```

Defines the Y-value of point C (f = <BW>) on the ETSI ITS absolute emission mask for the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, absolute limits'.

param tsm_lim_yabs_lev_c
numeric Range: -150 dBm to 30 dBm

param bandwidthA
optional repeated capability selector. Default value: Bw10

6.1.3.3.4.40 D

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW<bandwidth>
↪:ABSolute:Y:D
```

class DCls

D commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthA=BandwidthA.Bw10*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:ABSolute:Y:D
value: float = driver.configure.multiEval.limit.tsMask.pofdm.bw.absolute.y.d.
↪get(bandwidthA = repcap.BandwidthA.Bw10)
```

Defines the Y-value of point D (f = 0.55 <BW>) on the ETSI ITS absolute emission mask for the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, absolute limits'.

param bandwidthA
optional repeated capability selector. Default value: Bw10

return
tsm_lim_yabs_lev_d: numeric Range: -150 dBm to 30 dBm

set(*tsm_lim_yabs_lev_d: float*, *bandwidthA=BandwidthA.Bw10*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:ABSolute:Y:D
driver.configure.multiEval.limit.tsMask.pofdm.bw.absolute.y.d.set(tsm_lim_yabs_
↪lev_d = 1.0, bandwidthA = repcap.BandwidthA.Bw10)
```

Defines the Y-value of point D (f = 0.55 <BW>) on the ETSI ITS absolute emission mask for the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, absolute limits'.

param tsm_lim_yabs_lev_d
numeric Range: -150 dBm to 30 dBm

param bandwidthA
optional repeated capability selector. Default value: Bw10

6.1.3.3.4.41 E

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW<bandwidth>
↪:ABSolute:Y:E
```

class ECls

E commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthA=BandwidthA.Bw10*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:ABSolute:Y:E
value: float = driver.configure.multiEval.limit.tsMask.pofdm.bw.absolute.y.e.
↪get(bandwidthA = repcap.BandwidthA.Bw10)
```

Defines the Y-value of point E (f = 0.5 <BW>) on the ETSI ITS absolute emission mask for the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, absolute limits'.

param bandwidthA
optional repeated capability selector. Default value: Bw10

return
tsm_lim_yabs_lev_e: numeric Range: -150 dBm to 30 dBm

set(*tsm_lim_yabs_lev_e: float*, *bandwidthA=BandwidthA.Bw10*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW

```

Defines the Y-value of point E (f = 0.5 <bandwidth>) on the 802.11p spectrum mask for power class B and the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, by regulation'.

param tsm_lim_yrel_lev_e
numeric Range: -90 dB to 10 dB

param bandwidthB
optional repeated capability selector. Default value: Bw5

6.1.3.3.4.57 Enable

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW<bandwidth>:ENABle
```

class EnableCls

Enable commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthB=BandwidthB.Bw5*) → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:ENABle
value: bool = driver.configure.multiEval.limit.tsMask.pofdm.bw.enable.
↪get(bandwidthB = repcap.BandwidthB.Bw5)
```

Activates or deactivates the transmit spectrum mask limit check for 802.11p signals with the specified <bandwidth>.

param bandwidthB
optional repeated capability selector. Default value: Bw5

return
tsm_lim_enable: OFF | ON

set(*tsm_lim_enable: bool*, *bandwidthB=BandwidthB.Bw5*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:ENABle
driver.configure.multiEval.limit.tsMask.pofdm.bw.enable.set(tsm_lim_enable =␣
↪False, bandwidthB = repcap.BandwidthB.Bw5)
```

Activates or deactivates the transmit spectrum mask limit check for 802.11p signals with the specified <bandwidth>.

param tsm_lim_enable
OFF | ON

param bandwidthB
optional repeated capability selector. Default value: Bw5

6.1.3.3.4.58 UserDefined

class UserDefinedCls

UserDefined commands group definition. 5 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```

↪yrel_lev_c = 1.0, bandwidthB = repcap.BandwidthB.Bw5)
```

Defines the Y-value of point C (f = <bandwidth>) on the 802.11p spectrum mask for power class 'user defined' and the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, by regulation'.

param tsm_lim_yrel_lev_c
numeric Range: -90 dB to 10 dB

param bandwidthB
optional repeated capability selector. Default value: Bw5

6.1.3.3.4.63 D

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW<bandwidth>
↪:UDEFined:Y:D
```

class DCls

D commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthB=BandwidthB.Bw5*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:UDEFined:Y:D
value: float = driver.configure.multiEval.limit.tsMask.pofdm.bw.userDefined.y.d.
↪get(bandwidthB = repcap.BandwidthB.Bw5)
```

Defines the Y-value of point D (f = 0.55 <bandwidth>) on the 802.11p spectrum mask for power class 'user defined' and the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, by regulation'.

param bandwidthB
optional repeated capability selector. Default value: Bw5

return
tsm_lim_yrel_lev_d: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_d: float*, *bandwidthB=BandwidthB.Bw5*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:UDEFined:Y:D
driver.configure.multiEval.limit.tsMask.pofdm.bw.userDefined.y.d.set(tsm_lim_
↪yrel_lev_d = 1.0, bandwidthB = repcap.BandwidthB.Bw5)
```

Defines the Y-value of point D (f = 0.55 <bandwidth>) on the 802.11p spectrum mask for power class 'user defined' and the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, by regulation'.

param tsm_lim_yrel_lev_d
numeric Range: -90 dB to 10 dB

param bandwidthB
optional repeated capability selector. Default value: Bw5

6.1.3.3.4.64 E

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW<bandwidth>
↪:UDEFined:Y:E
```

class ECls

E commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthB=BandwidthB.Bw5*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:UDEFined:Y:E
value: float = driver.configure.multiEval.limit.tsMask.pofdm.bw.userDefined.y.e.
↪get(bandwidthB = repcap.BandwidthB.Bw5)
```

Defines the Y-value of point E (f = 0.5 <bandwidth>) on the 802.11p spectrum mask for power class 'user defined' and the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, by regulation'.

param bandwidthB
optional repeated capability selector. Default value: Bw5

return
tsm_lim_yrel_lev_e: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_e: float*, *bandwidthB=BandwidthB.Bw5*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:POFDm:BW
↪<bandwidth>:UDEFined:Y:E
driver.configure.multiEval.limit.tsMask.pofdm.bw.userDefined.y.e.set(tsm_lim_
↪yrel_lev_e = 1.0, bandwidthB = repcap.BandwidthB.Bw5)
```

Defines the Y-value of point E (f = 0.5 <bandwidth>) on the 802.11p spectrum mask for power class 'user defined' and the specified <bandwidth>. For background information, see 'Transmit spectrum mask OFDM, by regulation'.

param tsm_lim_yrel_lev_e
numeric Range: -90 dB to 10 dB

param bandwidthB
optional repeated capability selector. Default value: Bw5

6.1.3.3.4.65 VhtOfdm

class VhtOfdmCls

VhtOfdm commands group definition. 6 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.tsMask.vhtOfdm.clone()
```

Subgroups

6.1.3.3.4.66 Bw<BandwidthE>

RepCap Settings

```
# Range: Bw5 .. Bw8080
rc = driver.configure.multiEval.limit.tsMask.vht0fdm.bw.repcap_bandwidthE_get()
driver.configure.multiEval.limit.tsMask.vht0fdm.bw.repcap_bandwidthE_set(repcap.
↪BandwidthE.Bw5)
```

class BwCls

Bw commands group definition. 6 total commands, 3 Subgroups, 0 group commands Repeated Capability: BandwidthE, default value after init: BandwidthE.Bw5

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.tsMask.vht0fdm.bw.clone()
```

Subgroups

6.1.3.3.4.67 AbsLimit

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW<bandwidth>
↪:ABSLimit
```

class AbsLimitCls

AbsLimit commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthE=BandwidthE.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:ABSLimit
value: float = driver.configure.multiEval.limit.tsMask.vht0fdm.bw.absLimit.
↪get(bandwidthE = repcap.BandwidthE.Default)
```

Defines an absolute power limit for 802.11ac signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, absolute limits' for background information.

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
tsm_lim_abs: numeric Limit value, applies to frequency offsets greater than 3/2*bandwidth, measured at 100 kHz RBW Range: -90 dBm to 10 dBm

set(*tsm_lim_abs: float*, *bandwidthE=BandwidthE.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:ABSLimit
driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.absLimit.set(tsm_lim_abs = 1.
↪0, bandwidthE = repcap.BandwidthE.Default)
```

Defines an absolute power limit for 802.11ac signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, absolute limits' for background information.

param tsm_lim_abs
numeric Limit value, applies to frequency offsets greater than 3/2*bandwidth, measured at 100 kHz RBW Range: -90 dBm to 10 dBm

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.4.68 Enable

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW<bandwidth>
↪:ENABle
```

class EnableCls

Enable commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthE=BandwidthE.Default*) → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:ENABle
value: bool = driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.enable.
↪get(bandwidthE = repcap.BandwidthE.Default)
```

Enables or disables the transmit spectrum mask for 802.11ac signals with the specified <bandwidth>, i.e. activates or deactivates the corresponding limit checks.

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
tsm_lim_enable: OFF | ON

set(*tsm_lim_enable: bool*, *bandwidthE=BandwidthE.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:ENABle
driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.enable.set(tsm_lim_enable =␣
↪False, bandwidthE = repcap.BandwidthE.Default)
```

Enables or disables the transmit spectrum mask for 802.11ac signals with the specified <bandwidth>, i.e. activates or deactivates the corresponding limit checks.

param tsm_lim_enable
OFF | ON

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.4.69 Y

class YCls

Y commands group definition. 4 total commands, 4 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.y.clone()
```

Subgroups

6.1.3.3.4.70 A

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW<bandwidth>:Y:A
```

class ACls

A commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthE=BandwidthE.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:Y:A
value: float = driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.y.a.
↪get(bandwidthE = repcap.BandwidthE.Default)
```

Defines the relative spectral density limit for point A (frequency offset: 2*bandwidth) on the transmit spectrum mask for 802.11ac signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
tsm_lim_yrel_lev_a: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_a: float*, *bandwidthE=BandwidthE.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:Y:A
driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.y.a.set(tsm_lim_yrel_lev_a =␣
↪1.0, bandwidthE = repcap.BandwidthE.Default)
```

Defines the relative spectral density limit for point A (frequency offset: 2*bandwidth) on the transmit spectrum mask for 802.11ac signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_a
numeric Range: -90 dB to 10 dB

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.4.71 B

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW<bandwidth>:Y:B
```

class BCls

B commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthE=BandwidthE.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:Y:B
value: float = driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.y.b.
↪get(bandwidthE = repcap.BandwidthE.Default)
```

Defines the relative spectral density limit for point B (frequency offset: 3/2*bandwidth) on the transmit spectrum mask for 802.11ac signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
tsm_lim_yrel_lev_b: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_b: float*, *bandwidthE=BandwidthE.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:Y:B
driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.y.b.set(tsm_lim_yrel_lev_b =␣
↪1.0, bandwidthE = repcap.BandwidthE.Default)
```

Defines the relative spectral density limit for point B (frequency offset: 3/2*bandwidth) on the transmit spectrum mask for 802.11ac signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_b
numeric Range: -90 dB to 10 dB

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.4.72 C

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW<bandwidth>:Y:C
```

class CCls

C commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthE=BandwidthE.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:Y:C
value: float = driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.y.c.
↪get(bandwidthE = repcap.BandwidthE.Default)
```

Defines the relative spectral density limit for point C (frequency offset: 1*bandwidth) on the transmit spectrum mask for 802.11ac signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
tsm_lim_yrel_lev_c: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_c: float*, *bandwidthE=BandwidthE.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:Y:C
driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.y.c.set(tsm_lim_yrel_lev_c =␣
↪1.0, bandwidthE = repcap.BandwidthE.Default)
```

Defines the relative spectral density limit for point C (frequency offset: 1*bandwidth) on the transmit spectrum mask for 802.11ac signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_c
numeric Range: -90 dB to 10 dB

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.3.4.73 D

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW<bandwidth>:Y:D
```

class DCls

D commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*bandwidthE=BandwidthE.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:Y:D
value: float = driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.y.d.
↪get(bandwidthE = repcap.BandwidthE.Default)
```

Defines the relative spectral density limit for point D (center frequency offset: 1/2*bandwidth + 1 MHz) on the transmit spectrum mask for 802.11ac signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

return
tsm_lim_yrel_lev_d: numeric Range: -90 dB to 10 dB

set(*tsm_lim_yrel_lev_d: float*, *bandwidthE=BandwidthE.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIMit:TSMask:VHTofdm:BW
↪<bandwidth>:Y:D
driver.configure.multiEval.limit.tsMask.vhtOfdm.bw.y.d.set(tsm_lim_yrel_lev_d =␣
↪1.0, bandwidthE = repcap.BandwidthE.Default)
```

Defines the relative spectral density limit for point D (center frequency offset: 1/2*bandwidth + 1 MHz) on the transmit spectrum mask for 802.11ac signals with the specified <bandwidth>. See 'Transmit spectrum mask OFDM, default masks' for background information.

param tsm_lim_yrel_lev_d
numeric Range: -90 dB to 10 dB

param bandwidthE
optional repeated capability selector. Default value: Bw5 (settable in the interface 'Bw')

6.1.3.4 ListPy

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:COUNt
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:CMODe
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:STIMe

CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:BTYPe
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:RTRigger
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST
```

class ListPyCls

ListPy commands group definition. 30 total commands, 4 Subgroups, 12 group commands

get_bandwidth() → List[Bandwidth]

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:BWIDth
value: List[enums.Bandwidth] = driver.configure.multiEval.listPy.get_bandwidth()
```

Specifies the channel bandwidths for all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

return
bandwidths: No help available

get_btype() → List[BurstTypeB]

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:BTYPe
value: List[enums.BurstTypeB] = driver.configure.multiEval.listPy.get_btype()
```

Specifies the burst types for standard 802.11n for all segments in list mode. Do not use the command for other standards. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

return
burst_types: No help available

get_cmode() → ParameterSetMode

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:CMODe
value: enums.ParameterSetMode = driver.configure.multiEval.listPy.get_cmode()
```

No command help available

return
connector_mode: No help available

get_count() → int

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:COUNt
value: int = driver.configure.multiEval.listPy.get_count()
```

Defines the number of segments in the entire measurement interval.

return
no_of_segments: numeric Range: 1 to 100

get_envelope_power() → List[float]

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:ENPower
value: List[float] = driver.configure.multiEval.listPy.get_envelope_power()
```

Specifies the expected nominal power of the measured RF signal for all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

return
levels: No help available

get_frequency() → List[float]

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:FREQuency
value: List[float] = driver.configure.multiEval.listPy.get_frequency()
```

Specifies the measurement frequencies for all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

return
frequencies: No help available

get_moffset() → List[float]

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:MOFFset
value: List[float] = driver.configure.multiEval.listPy.get_moffset()
```

Specifies the measurement offsets for all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

return
meas_offsets: No help available

get_mtime() → List[float]

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:MTIMe
value: List[float] = driver.configure.multiEval.listPy.get_mtime()
```

Specifies the measurement times for all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

return
meas_times: No help available

get_rtrigger() → List[bool]

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:RTRigger
value: List[bool] = driver.configure.multiEval.listPy.get_rtrigger()
```

Specifies, whether the measurement in list mode waits for a trigger event before measuring the segment, or not. For the first segment, the value OFF is always interpreted as ON. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas. Configure.MultiEval.ListPy.count.

return
retriggers: No help available

get_standard() → List[IeeeStandard]

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:STANdard
value: List[enums.IeeeStandard] = driver.configure.multiEval.listPy.get_
↪standard()
```

Specifies the standard for all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas. Configure.MultiEval.ListPy.count.

return
standards: No help available

get_stime() → List[float]

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:STIMe
value: List[float] = driver.configure.multiEval.listPy.get_stime()
```

Specifies the segment times for all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas. Configure.MultiEval.ListPy.count.

return
segment_times: No help available

get_value() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST
value: bool = driver.configure.multiEval.listPy.get_value()
```

Enables or disables the list mode.

return
list_mode_enable: OFF | ON OFF: Disable list mode. ON: Enable list mode.

set_bandwidth(*bandwidths: List[Bandwidth]*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:BWIDth
driver.configure.multiEval.listPy.set_bandwidth(bandwidths = [Bandwidth.BW05mhz,
↪ Bandwidth.BW88mhz])
```

Specifies the channel bandwidths for all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

param bandwidths
No help available

set_btype(*burst_types: List[BurstTypeB]*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:BTYPe
driver.configure.multiEval.listPy.set_btype(burst_types = [BurstTypeB.
↪GREenfield, BurstTypeB.MIXed])
```

Specifies the burst types for standard 802.11n for all segments in list mode. Do not use the command for other standards. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

param burst_types
No help available

set_cmode(*connector_mode: ParameterSetMode*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:CMODe

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:RTRigger
driver.configure.multiEval.listPy.set_rtrigger(retriggers = [True, False, True])
```

Specifies, whether the measurement in list mode waits for a trigger event before measuring the segment, or not. For the first segment, the value OFF is always interpreted as ON. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas. Configure.MultiEval.ListPy.count.

param retriggers
No help available

set_standard(*standards: List[IeeeStandard]*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:STANdard
driver.configure.multiEval.listPy.set_standard(standards = [IeeeStandard.DSSS,␣
↪IeeeStandard.VHTofdm])
```

Specifies the standard for all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas. Configure.MultiEval.ListPy.count.

param standards
No help available

set_stime(*segment_times: List[float]*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:STIMe
driver.configure.multiEval.listPy.set_stime(segment_times = [1.1, 2.2, 3.3])
```

Specifies the segment times for all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas. Configure.MultiEval.ListPy.count.

param segment_times
No help available

set_value(*list_mode_enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST
driver.configure.multiEval.listPy.set_value(list_mode_enable = False)
```

Enables or disables the list mode.

param list_mode_enable
OFF | ON OFF: Disable list mode. ON: Enable list mode.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.listPy.clone()

No help available

6.1.3.4.3 Segment<SegmentB>

RepCap Settings

```
# Range: Nr1 .. Nr32
rc = driver.configure.multiEval.listPy.segment.repcap_segmentB_get()
driver.configure.multiEval.listPy.segment.repcap_segmentB_set(repcap.SegmentB.Nr1)
```

class SegmentCls

Segment commands group definition. 13 total commands, 13 Subgroups, 0 group commands Repeated Capability: SegmentB, default value after init: SegmentB.Nr1

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.listPy.segment.clone()
```

Subgroups

6.1.3.4.3.1 Bandwidth

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:BWIDth
```

class BandwidthCls

Bandwidth commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*segmentB=SegmentB.Default*) → Bandwidth

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:BWIDth
value: enums.Bandwidth = driver.configure.multiEval.listPy.segment.bandwidth.
↪get(segmentB = repcap.SegmentB.Default)
```

Specifies the channel bandwidth for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
bandwidth: BW05mhz | BW10mhz | BW20mhz | BW40mhz | BW80mhz | BW88mhz | BW16mhz BW05mhz: 5 MHz BW10mhz: 10 MHz BW20mhz: 20 MHz BW40mhz: 40 MHz BW80mhz: 80 MHz BW88mhz: 80+80 MHz BW16mhz: 160 MHz

set(*bandwidth: Bandwidth*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:BWIDth
driver.configure.multiEval.listPy.segment.bandwidth.set(bandwidth = enums.
↪Bandwidth.BW05mhz, segmentB = repcap.SegmentB.Default)
```

Specifies the channel bandwidth for segment <no> in list mode.

param bandwidth
BW05mhz | BW10mhz | BW20mhz | BW40mhz | BW80mhz | BW88mhz | BW16mhz BW05mhz: 5 MHz BW10mhz: 10 MHz BW20mhz: 20 MHz BW40mhz: 40 MHz BW80mhz: 80 MHz BW88mhz: 80+80 MHz BW16mhz: 160 MHz

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.2 Btype

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:BTYPe
```

class BtypeCls

Btype commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*segmentB=SegmentB.Default*) → BurstTypeB

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:BTYPe
value: enums.BurstTypeB = driver.configure.multiEval.listPy.segment.btype.
↪get(segmentB = repcap.SegmentB.Default)
```

Specifies the burst types for standard 802.11n for segment <no> in list mode. Do not use the command for other standards.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
burst_type: MIXed | GREenfield MIXed: for coexistence with other standards GREenfield: incompatible with other standards

set(*burst_type: BurstTypeB*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:BTYPe
driver.configure.multiEval.listPy.segment.btype.set(burst_type = enums.
↪BurstTypeB.GREenfield, segmentB = repcap.SegmentB.Default)
```

Specifies the burst types for standard 802.11n for segment <no> in list mode. Do not use the command for other standards.

param burst_type
MIXed | GREenfield MIXed: for coexistence with other standards GREenfield: incompatible with other standards

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.3 EnvelopePower

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:ENPower
```

class EnvelopePowerCls

EnvelopePower commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*segmentB=SegmentB.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:ENPower
value: float = driver.configure.multiEval.listPy.segment.envelopePower.
↪get(segmentB = repcap.SegmentB.Default)
```

Specifies the expected nominal power of the measured RF signal for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
level: numeric The range of the expected nominal power can be calculated as follows: Range (Expected Nominal Power) = Range (Input Power) + External Attenuation - User Margin Range: -47 dBm to 34 dBm for the input power at RF 1 COM and RF 2 COM (please notice also the ranges quoted in the data sheet) .

set(*level: float*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:ENPower
driver.configure.multiEval.listPy.segment.envelopePower.set(level = 1.0,␣
↪segmentB = repcap.SegmentB.Default)
```

Specifies the expected nominal power of the measured RF signal for segment <no> in list mode.

param level
numeric The range of the expected nominal power can be calculated as follows: Range (Expected Nominal Power) = Range (Input Power) + External Attenuation - User Margin Range: -47 dBm to 34 dBm for the input power at RF 1 COM and RF 2 COM (please notice also the ranges quoted in the data sheet) .

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.4 Frequency

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:FREQuency
```

class FrequencyCls

Frequency commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*segmentB=SegmentB.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:FREQuency
value: float = driver.configure.multiEval.listPy.segment.frequency.get(segmentB␣
↪= repcap.SegmentB.Default)
```

Specifies the center frequency of the RF analyzer for segment <no> in list mode. For the supported frequency range, see 'Frequency ranges'.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
frequency: numeric Unit: Hz

set(*frequency: float*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:FREQuency
driver.configure.multiEval.listPy.segment.frequency.set(frequency = 1.0,␣
↪segmentB = repcap.SegmentB.Default)
```

Specifies the center frequency of the RF analyzer for segment <no> in list mode. For the supported frequency range, see 'Frequency ranges'.

param frequency
numeric Unit: Hz

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.5 Moffset

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:MOFFset
```

class MoffsetCls

Moffset commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*segmentB=SegmentB.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:MOFFset
value: float = driver.configure.multiEval.listPy.segment.moffset.get(segmentB =␣
↪repcap.SegmentB.Default)
```

Specifies the measurement offset for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
meas_offset: numeric Range: 0 s to 1 s

set(*meas_offset: float*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:MOFFset
driver.configure.multiEval.listPy.segment.moffset.set(meas_offset = 1.0,␣
↪segmentB = repcap.SegmentB.Default)
```

Specifies the measurement offset for segment <no> in list mode.

param meas_offset
numeric Range: 0 s to 1 s

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.6 Mtime

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:MTIMe
```

class MtimeCls

Mtime commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*segmentB=SegmentB.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:MTIMe
value: float = driver.configure.multiEval.listPy.segment.mtime.get(segmentB =␣
↪repcap.SegmentB.Default)
```

Specifies the measurement time for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
meas_time: numeric Duration of measurement for the segment Range: 4E-4 s to 1 s

set(*meas_time: float*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:MTIMe
driver.configure.multiEval.listPy.segment.mtime.set(meas_time = 1.0, segmentB =␣
↪repcap.SegmentB.Default)
```

Specifies the measurement time for segment <no> in list mode.

param meas_time
numeric Duration of measurement for the segment Range: 4E-4 s to 1 s

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.7 Result

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:RESult
```

class ResultCls

Result commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class ResultStruct

Response structure. Fields:

- Enable_Mod: bool: OFF | ON
- Enable_Sem: bool: OFF | ON

get(*segmentB=SegmentB.Default*) → ResultStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:RESult
value: ResultStruct = driver.configure.multiEval.listPy.segment.result.
↪get(segmentB = repcap.SegmentB.Default)
```

Enables or disables the evaluation of results for modulation and transmit spectrum mask measurements for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for ResultStruct structure arguments.

set(*enable_mod: bool*, *enable_sem: bool*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:RESult
driver.configure.multiEval.listPy.segment.result.set(enable_mod = False, enable_
↪sem = False, segmentB = repcap.SegmentB.Default)
```

Enables or disables the evaluation of results for modulation and transmit spectrum mask measurements for segment <no> in list mode.

param enable_mod
OFF | ON

param enable_sem
OFF | ON

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.8 Rtrigger

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:RTRigger
```

class RtriggerCls

Rtrigger commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*segmentB=SegmentB.Default*) → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:RTRigger
value: bool = driver.configure.multiEval.listPy.segment.rtrigger.get(segmentB =␣
↪repcap.SegmentB.Default)
```

Specifies for segment <no> in list mode, whether the measurement waits for a trigger event before measuring the segment, or not. For the first segment, the value OFF is always interpreted as ON. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
retrigger: OFF | ON OFF: measure the segment without retrigger ON: wait for a trigger event from the trigger source configured via method RsCmwWlanMeas.Trigger.MultiEval.source

set(*retrigger: bool*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:RTRigger
driver.configure.multiEval.listPy.segment.rtrigger.set(retrigger = False,␣
↪segmentB = repcap.SegmentB.Default)
```

Specifies for segment <no> in list mode, whether the measurement waits for a trigger event before measuring the segment, or not. For the first segment, the value OFF is always interpreted as ON. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

param retrigger
OFF | ON OFF: measure the segment without retrigger ON: wait for a trigger event from the trigger source configured via method RsCmwWlanMeas.Trigger.MultiEval.source

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.9 Scount

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:SCOunt
```

class ScountCls

Scount commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class ScountStruct

Response structure. Fields:

- Stat_Count_Mod: int: numeric No. of burst to be measured during modulation measurements Range: 1 to 2000
- Stat_Count_Sem: int: numeric No. of bursts to be measured during spectrum measurements Range: 1 to 1000

get(*segmentB=SegmentB.Default*) → ScountStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:SCOunt
value: ScountStruct = driver.configure.multiEval.listPy.segment.scount.
↪get(segmentB = repcap.SegmentB.Default)
```

Specifies the modulation and spectrum statistical length for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for ScountStruct structure arguments.

set(*stat_count_mod: int*, *stat_count_sem: int*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:SCOunt
driver.configure.multiEval.listPy.segment.scount.set(stat_count_mod = 1, stat_
↪count_sem = 1, segmentB = repcap.SegmentB.Default)
```

Specifies the modulation and spectrum statistical length for segment <no> in list mode.

param stat_count_mod
numeric No. of burst to be measured during modulation measurements Range: 1 to 2000

param stat_count_sem
numeric No. of bursts to be measured during spectrum measurements Range: 1 to 1000

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.10 Setup

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:SETup
```

class SetupCls

Setup commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class SetupStruct

Structure for setting input parameters. Fields:

- Segment_Time: float: numeric Duration of the segment Range: 4E-5 s to 1 s
- Meas_Time: float: numeric Duration of measurement for the segment Range: 1E-5 s to 1 s
- Meas_Offset: float: numeric Measurement offset for the segment Range: 1E-5 s to 1 s
- Level: float: numeric Expected nominal power of the measured RF signal within the segment The range of the expected nominal power can be calculated as follows: Range (Expected Nominal Power) = Range (Input Power) + External Attenuation - User Margin Range: -47 dBm to 34 dBm for the input power at RF 1 COM and RF 2 COM (please notice also the ranges quoted in the data sheet) . , Unit: dBm
- Frequency: float: numeric Configures the center frequency of the RF analyzer. Set it to the center frequency of the received WLAN channel. Range: 70 MHz to 6 GHz
- Standard: enums.IeeeStandard: DSSS | LOFDm | HTOFdm | VHTofdm | HEOFdm | POFDm DSSS: 802.11b/g (DSSS) LOFDm: 802.11a/g (OFDM) HTOFdm: 802.11n VHTofdm: 802.11ac HEOFdm: 802.11ax POFDm: 802.11p
- Bandwidth: enums.Bandwidth: BW05mhz | BW10mhz | BW20mhz | BW40mhz | BW80mhz | BW16mhz | BW88mhz BW05mhz: 5 MHz BW10mhz: 10 MHz BW20mhz: 20 MHz BW40mhz: 40 MHz BW80mhz: 80 MHz BW88mhz: 80+80 MHz BW16mhz: 160 MHz

get(*segmentB=SegmentB.Default*) → SetupStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:SETup
value: SetupStruct = driver.configure.multiEval.listPy.segment.setup.
↪get(segmentB = repcap.SegmentB.Default)
```

Specifies burst parameter settings for segment <no> in list mode. Send this command for all segments to be measured.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for SetupStruct structure arguments.

set(*structure: SetupStruct*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:SETup
structure = driver.configure.multiEval.listPy.segment.setup.SetupStruct()
structure.Segment_Time: float = 1.0
```

(continues on next page)

(continued from previous page)

```
structure.Meas_Time: float = 1.0
structure.Meas_Offset: float = 1.0
structure.Level: float = 1.0
structure.Frequency: float = 1.0
structure.Standard: enums.IeeeStandard = enums.IeeeStandard.DSSS
structure.Bandwidth: enums.Bandwidth = enums.Bandwidth.BW05mhz
driver.configure.multiEval.listPy.segment.setup.set(structure, segmentB =␣
↪repcap.SegmentB.Default)
```

Specifies burst parameter settings for segment <no> in list mode. Send this command for all segments to be measured.

param structure
for set value, see the help for SetupStruct structure arguments.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.11 SingleCmw

class SingleCmwCls

SingleCmw commands group definition. 1 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.multiEval.listPy.segment.singleCmw.clone()
```

param connector
No help available

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.13 Standard

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:STANdard
```

`class StandardCls`

Standard commands group definition. 1 total commands, 0 Subgroups, 1 group commands

`get`(*segmentB=SegmentB.Default*) → IeeeStandard

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:STANdard
value: enums.IeeeStandard = driver.configure.multiEval.listPy.segment.standard.
↪get(segmentB = repcap.SegmentB.Default)
```

Specifies the standard for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
standard: DSSS | LOFDm | HTOFdm | VHTofdm | HEOFdm | POFDm DSSS: 802.11b/g (DSSS) LOFDm: 802.11a/g (OFDM) HTOFdm: 802.11n VHTofdm: 802.11ac HEOFdm: 802.11ax POFDm: 802.11p

`set`(*standard: IeeeStandard*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:STANdard
driver.configure.multiEval.listPy.segment.standard.set(standard = enums.
↪IeeeStandard.DSSS, segmentB = repcap.SegmentB.Default)
```

Specifies the standard for segment <no> in list mode.

param standard
DSSS | LOFDm | HTOFdm | VHTofdm | HEOFdm | POFDm DSSS: 802.11b/g (DSSS) LOFDm: 802.11a/g (OFDM) HTOFdm: 802.11n VHTofdm: 802.11ac HEOFdm: 802.11ax POFDm: 802.11p

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.3.14 Stime

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:STIMe
```

class StimeCls

Stime commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*segmentB=SegmentB.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:STIMe
value: float = driver.configure.multiEval.listPy.segment.stime.get(segmentB =␣
↪repcap.SegmentB.Default)
```

Specifies the duration of the segment for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
segment_time: numeric Range: 4E-4 s to 1 s

set(*segment_time: float*, *segmentB=SegmentB.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:STIMe
driver.configure.multiEval.listPy.segment.stime.set(segment_time = 1.0,␣
↪segmentB = repcap.SegmentB.Default)
```

Specifies the duration of the segment for segment <no> in list mode.

param segment_time
numeric Range: 4E-4 s to 1 s

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

6.1.3.4.4 SingleCmw

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:CMWS:CONNector
```

class SingleCmwCls

SingleCmw commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get_connector() → List[ConnectorSwitchExt]

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:CMWS:CONNector
value: List[enums.ConnectorSwitchExt] = driver.configure.multiEval.listPy.
↪singleCmw.get_connector()
```

connectors: No help available

set_connector(*connectors: List[ConnectorSwitchExt]*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:LIST:CMWS:CONNector
driver.configure.multiEval.listPy.singleCmw.set_connector(connectors =␣
↪[ConnectorSwitchExt.OFF, ConnectorSwitchExt.RH8])
```

No command help available

param connectors
No help available

6.1.3.5 PowerVsTime

SCPI Commands :

```
CONFigure:WLAN:MEASurement<instance>:MEValuation:PVTime:RPOWer
CONFigure:WLAN:MEASurement<instance>:MEValuation:PVTime:ALENgth
CONFigure:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe
CONFigure:WLAN:MEASurement<Instance>:MEValuation:PVTime:FEDGe
CONFigure:WLAN:MEASurement<Instance>:MEValuation:PVTime:BURSt
```

class PowerVsTimeCls

PowerVsTime commands group definition. 5 total commands, 0 Subgroups, 5 group commands

get_alength() → float

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:MEValuation:PVTime:ALENgth
value: float = driver.configure.multiEval.powerVsTime.get_alength()
```

Sets the length of the moving average filter, which smoothes the power trace and thus eliminates the modulation.

return
avg_lenth: numeric Range: 1 to 199

get_burst() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:PVTime:BURSt
value: bool = driver.configure.multiEval.powerVsTime.get_burst()
```

Enables or disables the evaluation of burst power results in the power vs time view.

return
burst: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_falling_edge() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:PVTime:FEDGe
value: bool = driver.configure.multiEval.powerVsTime.get_falling_edge()
```

Enables or disables the evaluation of falling edge results (transmit power-down ramp) in the power vs time view for DSSS signals.

return
fall: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_rising_edge() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe
value: bool = driver.configure.multiEval.powerVsTime.get_rising_edge()
```

Enables or disables the evaluation of rising edge results (transmit power-on ramp) in the power vs time view for DSSS signals.

return
rising: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_rpower() → RefPower

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:MEValuation:PVTime:RPOWer
value: enums.RefPower = driver.configure.multiEval.powerVsTime.get_rpower()
```

Sets the reference power to the maximum power or to the mean power of the burst. In DSSS, the thresholds for rising and falling edge results are defined as percentage values of the reference power.

return
ref_power: MAXimum | MEAN

set_alength(*avg_lenth: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:MEValuation:PVTime:ALENgth
driver.configure.multiEval.powerVsTime.set_alength(avg_lenth = 1.0)
```

Sets the length of the moving average filter, which smoothes the power trace and thus eliminates the modulation.

param avg_lenth
numeric Range: 1 to 199

set_burst(*burst: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:PVTime:BURSt
driver.configure.multiEval.powerVsTime.set_burst(burst = False)
```

Enables or disables the evaluation of burst power results in the power vs time view.

param burst
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

`set_falling_edge`(*fall: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:PVTime:FEDGe
driver.configure.multiEval.powerVsTime.set_falling_edge(fall = False)
```

Enables or disables the evaluation of falling edge results (transmit power-down ramp) in the power vs time view for DSSS signals.

param fall
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

`set_rising_edge`(*rising: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe
driver.configure.multiEval.powerVsTime.set_rising_edge(rising = False)
```

Enables or disables the evaluation of rising edge results (transmit power-on ramp) in the power vs time view for DSSS signals.

param rising
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

`set_rpower`(*ref_power: RefPower*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:MEValuation:PVTime:RPOWer
driver.configure.multiEval.powerVsTime.set_rpower(ref_power = enums.RefPower.
↪MAXimum)
```

Sets the reference power to the maximum power or to the mean power of the burst. In DSSS, the thresholds for rising and falling edge results are defined as percentage values of the reference power.

param ref_power
MAXimum | MEAN

6.1.3.6 Result

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:PVTime
CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:SFLatness
CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult[:ALL]
CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:EVM
CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:EVMCarrier
CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:IQConst
CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:UTERror
CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:EVMSymbol
CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:TSMask
CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:MSCalar
```

`class ResultCls`

Result commands group definition. 10 total commands, 0 Subgroups, 10 group commands

class AllStruct

Structure for setting input parameters. Contains optional set arguments. Fields:

- Mod_Scalar: bool: OFF | ON Modulation scalar overview OFF: Do not evaluate results. ON: Evaluate results.
- Power_Vs_Time: bool: OFF | ON Power vs time
- Evm_Vs_Chip: bool: OFF | ON EVM vs chip
- Evm_Vs_Sym: bool: OFF | ON EVM vs symbol
- Evm_Vs_Carr: bool: OFF | ON EVM vs carrier
- Iq_Const: bool: OFF | ON I/Q constellation diagram
- Spec_Flatness: bool: OFF | ON Spectrum flatness
- Tran_Spec_Mask: bool: OFF | ON Transmit spectrum mask.
- Unused_Tone_Err: bool: Optional setting parameter. OFF | ON Unused tone error

get_all() → AllStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult[:ALL]
value: AllStruct = driver.configure.multiEval.result.get_all()
```

Enables or disables the evaluation of results in the multi-evaluation measurement. This command combines all other CONFigure:WLAN:MEAS<i>:MEValuation:RESult... commands. Views can only be hidden for receive mode SISO. To check which views are relevant for which standard, see 'Measurement results'.

return
structure: for return value, see the help for AllStruct structure arguments.

get_evm() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:EVM
value: bool = driver.configure.multiEval.result.get_evm()
```

Enables or disables the evaluation of EVM vs chip results.

return
evm_enable: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_evm_carrier() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:EVMCarrier
value: bool = driver.configure.multiEval.result.get_evm_carrier()
```

Enables or disables the evaluation of EVM vs carrier results.

return
evm_enable: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_evm_symbol() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:EVMSymbol
value: bool = driver.configure.multiEval.result.get_evm_symbol()
```

Enables or disables the evaluation of EVM vs symbol results.

return
evm_enable: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_iq_constant() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:IQConst
value: bool = driver.configure.multiEval.result.get_iq_constant()
```

Enables or disables the evaluation of I/Q constellation results.

return
iq_enable: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_mscalar() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:MSCalar
value: bool = driver.configure.multiEval.result.get_mscalar()
```

Enables or disables the evaluation of modulation scalar results.

return
modenable: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_power_vs_time() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:PVTime
value: bool = driver.configure.multiEval.result.get_power_vs_time()
```

Enables or disables the evaluation of power vs time results.

return
power_vs_time_enable: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_spectr_flatness() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:SFLatness
value: bool = driver.configure.multiEval.result.get_spectr_flatness()
```

Enables or disables the evaluation of spectrum flatness results.

return
spec_flatness: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_ts_mask() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:TSMask
value: bool = driver.configure.multiEval.result.get_ts_mask()
```

Enables or disables the evaluation of transmit spectrum mask results.

return
spec_enable: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

get_ut_error() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:UTERror
value: bool = driver.configure.multiEval.result.get_ut_error()
```

Enables or disables the evaluation unused tone error results.

return
ute_enable: OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

set_all(*value: AllStruct*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult[:ALL]
structure = driver.configure.multiEval.result.AllStruct()
structure.Mod_Scalar: bool = False
structure.Power_Vs_Time: bool = False
structure.Evm_Vs_Chip: bool = False
structure.Evm_Vs_Sym: bool = False
structure.Evm_Vs_Carr: bool = False
structure.Iq_Const: bool = False
structure.Spec_Flatness: bool = False
structure.Tran_Spec_Mask: bool = False
structure.Unused_Tone_Err: bool = False
driver.configure.multiEval.result.set_all(value = structure)
```

Enables or disables the evaluation of results in the multi-evaluation measurement. This command combines all other CONFigure:WLAN:MEAS<i>:MEValuation:RESult... commands. Views can only be hidden for receive mode SISO. To check which views are relevant for which standard, see 'Measurement results'.

param value
see the help for AllStruct structure arguments.

set_evm(*evm_enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:EVM
driver.configure.multiEval.result.set_evm(evm_enable = False)
```

Enables or disables the evaluation of EVM vs chip results.

param evm_enable
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

set_evm_carrier(*evm_enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:EVMCarrier
driver.configure.multiEval.result.set_evm_carrier(evm_enable = False)
```

Enables or disables the evaluation of EVM vs carrier results.

param evm_enable
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

set_evm_symbol(*evm_enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:EVMSymbol
driver.configure.multiEval.result.set_evm_symbol(evm_enable = False)
```

Enables or disables the evaluation of EVM vs symbol results.

param evm_enable
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

set_iq_constant(*iq_enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:IQConst
driver.configure.multiEval.result.set_iq_constant(iq_enable = False)
```

Enables or disables the evaluation of I/Q constellation results.

param iq_enable
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

set_mscalar(*modenable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:MSCalar
driver.configure.multiEval.result.set_mscalar(modenable = False)
```

Enables or disables the evaluation of modulation scalar results.

param modenable
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

set_power_vs_time(*power_vs_time_enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:PVTime
driver.configure.multiEval.result.set_power_vs_time(power_vs_time_enable =␣
↪False)
```

Enables or disables the evaluation of power vs time results.

param power_vs_time_enable
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

set_spectr_flatness(*spec_flatness: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:SFLatness
driver.configure.multiEval.result.set_spectr_flatness(spec_flatness = False)
```

Enables or disables the evaluation of spectrum flatness results.

param spec_flatness
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

set_ts_mask(*spec_enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:TSMask
driver.configure.multiEval.result.set_ts_mask(spec_enable = False)
```

Enables or disables the evaluation of transmit spectrum mask results.

param spec_enable
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

set_ut_error(*ute_enable: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:RESult:UTERror
driver.configure.multiEval.result.set_ut_error(ute_enable = False)
```

Enables or disables the evaluation unused tone error results.

param ute_enable
OFF | ON OFF: Do not evaluate results. ON: Evaluate results.

6.1.3.7 Scount

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCOunt:TSMask
CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCOunt:PVTime
CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCOunt:MODulation
```

class ScountCls

Scount commands group definition. 3 total commands, 0 Subgroups, 3 group commands

get_modulation() → int

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCOunt:MODulation
value: int = driver.configure.multiEval.scount.get_modulation()
```

Specifies the statistic count of the measurement. The statistic count is equal to the number of measurement intervals per single shot.

return
statistic_count: numeric Number of measurement intervals for modulation measurements Range: 1 to 2000

get_power_vs_time() → int

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCOunt:PVTime
value: int = driver.configure.multiEval.scount.get_power_vs_time()
```

Specifies the statistic count of the measurement. The statistic count is equal to the number of measurement intervals per single shot.

return
statistic_count: numeric Number of measurement intervals for the power vs time measurement Range: 1 to 2000

get_ts_mask() → int

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCOunt:TSMask
value: int = driver.configure.multiEval.scount.get_ts_mask()
```

Specifies the statistic count of the measurement. The statistic count is equal to the number of measurement intervals per single shot.

return
statistic_count: numeric Number of measurement intervals for the transmit spectrum mask measurement Range: 1 to 1000

set_modulation(*statistic_count: int*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCOunt:MODulation
driver.configure.multiEval.scount.set_modulation(statistic_count = 1)
```

Specifies the statistic count of the measurement. The statistic count is equal to the number of measurement intervals per single shot.

param statistic_count
numeric Number of measurement intervals for modulation measurements Range: 1 to 2000

set_power_vs_time(*statistic_count: int*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCOunt:PVTime
driver.configure.multiEval.scount.set_power_vs_time(statistic_count = 1)
```

Specifies the statistic count of the measurement. The statistic count is equal to the number of measurement intervals per single shot.

param statistic_count
numeric Number of measurement intervals for the power vs time measurement Range: 1 to 2000

set_ts_mask(*statistic_count: int*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SCOunt:TSMask
driver.configure.multiEval.scount.set_ts_mask(statistic_count = 1)
```

Specifies the statistic count of the measurement. The statistic count is equal to the number of measurement intervals per single shot.

param statistic_count
numeric Number of measurement intervals for the transmit spectrum mask measurement Range: 1 to 1000

6.1.3.8 SpectrFlatness

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:SFLatness:DMODe
```

class SpectrFlatnessCls

SpectrFlatness commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get_dmode() → DisplayMode

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SFLatness:DMODe
value: enums.DisplayMode = driver.configure.multiEval.spectrFlatness.get_dmode()
```

Selects the display mode of 'Spectrum Flatness' and 'Transmit Spectrum Mask' results to switch between relative and absolute result values (dB vs dBm) .

return
disp_mode: RELative | ABSolute

set_dmode(*disp_mode: DisplayMode*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:SFLatness:DMODe
driver.configure.multiEval.spectrFlatness.set_dmode(disp_mode = enums.
↪DisplayMode.ABSolute)
```

Selects the display mode of 'Spectrum Flatness' and 'Transmit Spectrum Mask' results to switch between relative and absolute result values (dB vs dBm) .

param disp_mode
RELative | ABSolute

6.1.3.9 TsMask

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:AFFTnum
CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:TROTime
CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBWPercent
CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:MSELection
CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:DMODe
```

class TsMaskCls

TsMask commands group definition. 5 total commands, 0 Subgroups, 5 group commands

get_afft_num() → int

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:AFFTnum
value: int = driver.configure.multiEval.tsMask.get_afft_num()
```

Specifies the number of FFT operations per burst.

return
aver_fft_num: numeric Range: 1 to 16

get_dmode() → DisplayMode

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:DMODe
value: enums.DisplayMode = driver.configure.multiEval.tsMask.get_dmode()
```

Selects the display mode of 'Spectrum Flatness' and 'Transmit Spectrum Mask' results to switch between relative and absolute result values (dB vs dBm) .

return
disp_mode: RELative | ABSolute

get_mselection() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:MSELection
value: float = driver.configure.multiEval.tsMask.get_mselection()
```

Selects the spectrum limit mask to be applied to 802.11p signals. See 'Transmit spectrum mask OFDM, by regulation'

return
mask_selection: IEEE | ETSI | ARIB IEEE: Relative spectral density limits, IEEE 802.11 ETSI: Absolute emission limits, ETSI EN 302 571 V1.1.1 (2008-09) ARIB: Absolute emission limits, ARIB STD-T109, only for 10 MHz bandwidth

get_obw_percent() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBWPercent
value: float or bool = driver.configure.multiEval.tsMask.get_obw_percent()
```

Enables/disables OBW measurement and sets the OBW percentage.

return
obw_power: (float or boolean) numeric | ON | OFF Range: 50 % to 100 % Additional values: ON | OFF (disables | enables OBW measurement)

get_tro_time() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:TROTime
value: float = driver.configure.multiEval.tsMask.get_tro_time()
```

Specifies the trigger offset between trigger event and FFT operation.

return
trigger_off_time: numeric Range: 0 s to 0.1E-3 s

set_afft_num(*aver_fft_num: int*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:AFFTnum
driver.configure.multiEval.tsMask.set_afft_num(aver_fft_num = 1)
```

Specifies the number of FFT operations per burst.

param aver_fft_num
numeric Range: 1 to 16

set_dmode(*disp_mode: DisplayMode*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:DMODe
driver.configure.multiEval.tsMask.set_dmode(disp_mode = enums.DisplayMode.
↪ABSolute)
```

Selects the display mode of 'Spectrum Flatness' and 'Transmit Spectrum Mask' results to switch between relative and absolute result values (dB vs dBm) .

param disp_mode
RELative | ABSolute

set_mselection(*mask_selection: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:MSELection
driver.configure.multiEval.tsMask.set_mselection(mask_selection = 1.0)
```

Selects the spectrum limit mask to be applied to 802.11p signals. See 'Transmit spectrum mask OFDM, by regulation'

param mask_selection
IEEE | ETSI | ARIB IEEE: Relative spectral density limits, IEEE 802.11 ETSI: Absolute emission limits, ETSI EN 302 571 V1.1.1 (2008-09) ARIB: Absolute emission limits, ARIB STD-T109, only for 10 MHz bandwidth

set_obw_percent(*obw_power: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBWPercent
driver.configure.multiEval.tsMask.set_obw_percent(obw_power = 1.0)
```

Enables/disables OBW measurement and sets the OBW percentage.

param obw_power
(float or boolean) numeric | ON | OFF Range: 50 % to 100 % Additional values: ON | OFF (disables | enables OBW measurement)

set_tro_time(*trigger_off_time: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:MEValuation:TSMask:TROTime
driver.configure.multiEval.tsMask.set_tro_time(trigger_off_time = 1.0)
```

Specifies the trigger offset between trigger event and FFT operation.

param trigger_off_time
numeric Range: 0 s to 0.1E-3 s

6.1.4 RfSettings

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:RFSettings:SANTennas
CONFigure:WLAN:MEASurement<Instance>:RFSettings:MLOFfset
CONFigure:WLAN:MEASurement<Instance>:RFSettings:FOFFset
CONFigure:WLAN:MEASurement<Instance>:RFSettings:LRINterval
```

class RfSettingsCls

RfSettings commands group definition. 13 total commands, 6 Subgroups, 4 group commands

get_foffset() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:FOFFset
value: float = driver.configure.rfSettings.get_foffset()
```

Sets a positive or negative frequency offset to be added to the center frequency (method RsCmwWlanMeas.Configure. RfSettings.Frequency.value) .

return
freq_offset: numeric Range: -80 kHz to 80 kHz

get_lr_interval() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:LRINterval
value: float = driver.configure.rfSettings.get_lr_interval()
```

No command help available

return
lvl_rang_interval: No help available

get_ml_offset() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:MLOFfset
value: float = driver.configure.rfSettings.get_ml_offset()
```

Varies the input level of the mixer in the analyzer path. For the combined signal path scenario, useCONFigure:WLAN:SIGN<i>:RFSettings:ANTenna<n>:MLOFfset.

return
ml_offset: No help available

get_santennas() → bool

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:SANTennas
value: bool = driver.configure.rfSettings.get_santennas()
```

It specifies whether the DUT uses separate antennas for the two segments of an 80+80 MHz signal. To assign RF input connectors to the two antennas, see CONFigure:WLAN:MEAS<i>:RFSettings:ANTenna<n>.

return
sep_ant: OFF | ON OFF: same antennas for both segments ON: separate antennas for each segment

set_foffset(*freq_offset: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:FOFFset
driver.configure.rfSettings.set_foffset(freq_offset = 1.0)
```

Sets a positive or negative frequency offset to be added to the center frequency (method RsCmwWlanMeas.Configure. RfSettings.Frequency.value) .

param freq_offset
numeric Range: -80 kHz to 80 kHz

set_lr_interval(*lvl_rang_interval: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:LRINterval
driver.configure.rfSettings.set_lr_interval(lvl_rang_interval = 1.0)
```

No command help available

param lvl_rang_interval
No help available

set_ml_offset(*ml_offset: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:MLOFfset
driver.configure.rfSettings.set_ml_offset(ml_offset = 1.0)
```

Varies the input level of the mixer in the analyzer path. For the combined signal path scenario, useCONFigure:WLAN:SIGN<i>:RFSettings:ANTenna<n>:MLOFfset.

param ml_offset
No help available

set_santennas(*sep_ant: bool*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:SANTennas
driver.configure.rfSettings.set_santennas(sep_ant = False)
```

It specifies whether the DUT uses separate antennas for the two segments of an 80+80 MHz signal. To assign RF input connectors to the two antennas, see CONFigure:WLAN:MEAS<i>:RFSettings:ANTenna<n>.

param sep_ant
OFF | ON OFF: same antennas for both segments ON: separate antennas for each segment

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.rfSettings.clone()
```

Subgroups

6.1.4.1 Antenna<Antenna>

RepCap Settings

```
# Range: Nr1 .. Nr8
rc = driver.configure.rfSettings.antenna.repcap_antenna_get()
driver.configure.rfSettings.antenna.repcap_antenna_set(repcap.Antenna.Nr1)
```

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:RFSettings:ANTenna<n>
```

class AntennaCls

Antenna commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: Antenna, default value after init: Antenna.Nr1

class GetStruct

Response structure. Fields:

- Connector_Smimo: enums.ConnectorSwitch: No parameter help available
- Connector_Tmimo: enums.RxConnector: No parameter help available
- Ext_Att: float: numeric External attenuation component for antenna n Range: 50 dB to 90 dB , Unit: dB
- Enp: float: numeric Expected nominal power for antenna n. It can be calculated as follows: Range (Expected Nominal Power) = Range (Input Power) + External Attenuation - User Margin The input power range is stated in the data sheet. Unit: dBm

get(*antenna=Antenna.Default*) → GetStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:ANTenna<n>
value: GetStruct = driver.configure.rfSettings.antenna.get(antenna = repcap.
↪Antenna.Default)
```

Assigns an RF input connector and optionally an external attenuation and expected nominal power to antenna <n>. The command is relevant for true MIMO and for 80+80 MHz signals with a separate antenna per segment. For 80+80 MHz signals, the antenna numbering continues for the second segment. Example: Two antennas per segment. Segment 0 uses antenna 1 and 2. Segment 1 uses antenna 3 and 4.

param antenna
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Antenna')

return
structure: for return value, see the help for GetStruct structure arguments.

set(*connector_all: str*, *ext_att: float = None*, *enp: float = None*, *antenna=Antenna.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:ANTenna<n>
driver.configure.rfSettings.antenna.set(connector_all = rawAbc, ext_att = 1.0,␣
↪enp = 1.0, antenna = repcap.Antenna.Default)
```

Assigns an RF input connector and optionally an external attenuation and expected nominal power to antenna <n>. The command is relevant for true MIMO and for 80+80 MHz signals with a separate antenna per segment. For 80+80 MHz signals, the antenna numbering continues for the second segment. Example: Two antennas per segment. Segment 0 uses antenna 1 and 2. Segment 1 uses antenna 3 and 4.

param connector_all
1..8 Antenna For 80+80 MHz signals, limited to maximum 2 antennas: one antenna per segment. For true MIMO with R&S CMW500/2xx, limited to maximum 2 antennas

param ext_att
numeric External attenuation component for antenna n Range: 50 dB to 90 dB , Unit: dB

param enp
numeric Expected nominal power for antenna n. It can be calculated as follows: Range (Expected Nominal Power) = Range (Input Power) + External Attenuation - User Margin The input power range is stated in the data sheet. Unit: dBm

param antenna
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Antenna')

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.rfSettings.antenna.clone()
```

6.1.4.2 Eattenuation<Connector>

RepCap Settings

```
# Range: Nr1 .. Nr4
rc = driver.configure.rfSettings.eattenuation.repcap_connector_get()
driver.configure.rfSettings.eattenuation.repcap_connector_set(repcap.Connector.Nr1)
```

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:RFSettings:EATTenuation<antenna>
```

class EattenuationCls

Eattenuation commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: Connector, default value after init: Connector.Nr1

get(*connector=Connector.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:EATTenuation<antenna>
value: float = driver.configure.rfSettings.eattenuation.get(connector = repcap.
↪Connector.Default)
```

Defines an external attenuation (or gain, if the value is negative) , to be applied to RF input connectors for SISO and MIMO connections. For the combined signal path scenario, use CONFigure:WLAN:SIGN<i>:RFSettings:ANTenna<n>:EATTenuation:INPut .

param connector
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Eattenuation')

return
ext_attenuation: numeric Range: -50 dB to 90 dB

set(*ext_attenuation: float*, *connector=Connector.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:EATTenuation<antenna>
driver.configure.rfSettings.eattenuation.set(ext_attenuation = 1.0, connector =␣
↪repcap.Connector.Default)
```

Defines an external attenuation (or gain, if the value is negative) , to be applied to RF input connectors for SISO and MIMO connections. For the combined signal path scenario, use CONFigure:WLAN:SIGN<i>:RFSettings:ANTenna<n>:EATTenuation:INPut .

param ext_attenuation
numeric Range: -50 dB to 90 dB

param connector
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Eattenuation')

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.rfSettings.eattenuation.clone()
```

6.1.4.3 EnvelopePower<Connector>

RepCap Settings

```
# Range: Nr1 .. Nr4
rc = driver.configure.rfSettings.envelopePower.repcap_connector_get()
driver.configure.rfSettings.envelopePower.repcap_connector_set(repcap.Connector.Nr1)
```

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:RFSettings:ENPower<antenna>
```

class EnvelopePowerCls

EnvelopePower commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: Connector, default value after init: Connector.Nr1

get(*connector=Connector.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:ENPower<antenna>
value: float = driver.configure.rfSettings.envelopePower.get(connector = repcap.
↪Connector.Default)
```

Sets the expected nominal power of the measured RF signal. For the combined signal path scenario, useCONFigure:WLAN:SIGN<i>:RFSettings:ANTenna<n>:EPEPower.

param connector
optional repeated capability selector. Default value: Nr1 (settable in the interface 'EnvelopePower')

return
enp: numeric The range of the expected nominal power can be calculated as follows: Range (Expected Nominal Power) = Range (Input Power) + External Attenuation - User Margin The input power range is stated in the data sheet. Unit: dBm

set(*enp: float*, *connector=Connector.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:ENPower<antenna>
driver.configure.rfSettings.envelopePower.set(enp = 1.0, connector = repcap.
↪Connector.Default)
```

Sets the expected nominal power of the measured RF signal. For the combined signal path scenario, useCONFigure:WLAN:SIGN<i>:RFSettings:ANTenna<n>:EPEPower.

param enp
numeric The range of the expected nominal power can be calculated as follows: Range (Expected Nominal Power) = Range (Input Power) + External Attenuation - User Margin The input power range is stated in the data sheet. Unit: dBm

param connector
optional repeated capability selector. Default value: Nr1 (settable in the interface 'EnvelopePower')

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.rfSettings.envelopePower.clone()
```

6.1.4.4 Frequency

SCPI Commands :

```
CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency:SCHannel
CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency:BAND
CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency
```

class FrequencyCls

Frequency commands group definition. 4 total commands, 1 Subgroups, 3 group commands

get_band() → FrequencyBand

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency:BAND
value: enums.FrequencyBand = driver.configure.rfSettings.frequency.get_band()
```

Selects the frequency band.

return
freq_band: B24Ghz | B5GHz | B4GHz B24Ghz: 2.4 GHz band B4GHz: 4 GHz band B5GHz: 5 GHz band

get_schannel() → SlopeType

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency:SCHannel
value: enums.SlopeType = driver.configure.rfSettings.frequency.get_schannel()
```

Sets the position of the secondary channel relative to the primary channel for 40 MHz 802.11n signals.

return
second_channel: POSitive | NEGative POSitive: Secondary channel right above the primary channel NEGative: Secondary channel right below the primary channel

get_value() → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency
value: float = driver.configure.rfSettings.frequency.get_value()
```

Configures the center frequency of the RF analyzer. Set it to the center frequency of the received 20-MHz, 40-MHz, 80-MHz, or 160-MHz WLAN channel. For 80+80 MHz signals, set the center frequency of the left segment. The frequency of the right segment is calculated using channel distance, see method RsCmwWlanMeas.Configure.Isignal.cdistance.

INTRO_CMD_HELP: For the combined signal path scenario, use:

- CONFigure:WLAN:SIGN<i>:RFSettings:FREQuency
- CONFigure:WLAN:SIGN<i>:RFSettings:CHANnel

For the supported frequency range, see 'Frequency ranges'.

return
frequency: numeric Unit: Hz

set_band(*freq_band: FrequencyBand*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency:BAND
driver.configure.rfSettings.frequency.set_band(freq_band = enums.FrequencyBand.
↪B24Ghz)
```

Selects the frequency band.

param freq_band
B24Ghz | B5GHz | B4GHz B24Ghz: 2.4 GHz band B4GHz: 4 GHz band B5GHz: 5 GHz band

set_schannel(*second_channel: SlopeType*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency:SCHannel
driver.configure.rfSettings.frequency.set_schannel(second_channel = enums.
↪SlopeType.NEGative)
```

Sets the position of the secondary channel relative to the primary channel for 40 MHz 802.11n signals.

param second_channel
POSitive | NEGative POSitive: Secondary channel right above the primary channel NEGative: Secondary channel right below the primary channel

set_value(*frequency: float*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency
driver.configure.rfSettings.frequency.set_value(frequency = 1.0)
```

Configures the center frequency of the RF analyzer. Set it to the center frequency of the received 20-MHz, 40-MHz, 80-MHz, or 160-MHz WLAN channel. For 80+80 MHz signals, set the center frequency of the left segment. The frequency of the right segment is calculated using channel distance, see method RsCmwWlanMeas.Configure.Isignal.cdistance.

INTRO_CMD_HELP: For the combined signal path scenario, use:

- CONFigure:WLAN:SIGN<i>:RFSettings:FREQuency
- CONFigure:WLAN:SIGN<i>:RFSettings:CHANnel

For the supported frequency range, see 'Frequency ranges'.

param frequency
numeric Unit: Hz

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.rfSettings.frequency.clone()
```

Subgroups

6.1.4.4.1 Channels<Channels>

RepCap Settings

```
# Range: Nr1 .. Nr8
rc = driver.configure.rfSettings.frequency.channels.repcap_channels_get()
driver.configure.rfSettings.frequency.channels.repcap_channels_set(repcap.Channels.Nr1)
```

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency:CHANnels<Ch>
```

class ChannelsCls

Channels commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: Channels, default value after init: Channels.Nr1

class GetStruct

Response structure. Fields:

- Channel_Other: int: No parameter help available
- Channels: List[int]: decimal Comma-separated list of channel indices 1, 2, 4, or 8 values, see table below Range: 0 to 200

get(*channels=Channels.Default*) → GetStruct

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency:CHANnels<Ch>
value: GetStruct = driver.configure.rfSettings.frequency.channels.get(channels␣
↪= repcap.Channels.Default)
```

The command logic depends on the standard. This description applies to the standards 802.11ac and ax. For other standards, see method RsCmwWlanMeas.Configure.RfSettings.Frequency.Channels.set. A setting command sets channel number <Ch> to the channel index <Channel>. The other 20-MHz channels of the bandwidth are configured automatically, resulting in a sequence of channel indices with the increment 4, see examples. A query returns the channel indices of all 20-MHz channels as comma-separated list.

INTRO_CMD_HELP: Before using this command, configure the standard, the bandwidth and the band, see:

- method RsCmwWlanMeas.Configure.Isignal.standard
- method RsCmwWlanMeas.Configure.Isignal.bandwidth
- method RsCmwWlanMeas.Configure.RfSettings.Frequency.band

param channels
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channels')

return
structure: for return value, see the help for GetStruct structure arguments.

set(*channel: float*, *channels=Channels.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:FREQuency:CHANnels<Ch>
driver.configure.rfSettings.frequency.channels.set(channel = 1.0, channels =␣
↪repcap.Channels.Default)
```

The command logic depends on the standard. This description applies to the standards 802.11ac and ax. For other standards, see method RsCmwWlanMeas.Configure.RfSettings.Frequency.Channels.set. A setting command sets channel number <Ch> to the channel index <Channel>. The other 20-MHz channels of the bandwidth are configured automatically, resulting in a sequence of channel indices with the increment 4, see examples. A query returns the channel indices of all 20-MHz channels as comma-separated list.

INTRO_CMD_HELP: Before using this command, configure the standard, the bandwidth and the band, see:

- method RsCmwWlanMeas.Configure.Isignal.standard
- method RsCmwWlanMeas.Configure.Isignal.bandwidth
- method RsCmwWlanMeas.Configure.RfSettings.Frequency.band

param channel
numeric Channel index for the 20-MHz channel number Ch For a valid configuration, all 20-MHz channels must fit into the band. So the effective ranges depend on Ch, see table below. Range: 0 to 200

param channels
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channels')

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.rfSettings.frequency.channels.clone()
```

6.1.4.5 LrStart

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:RFSettings:LRSTart
```

class LrStartCls

LrStart commands group definition. 1 total commands, 0 Subgroups, 1 group commands

set() → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:LRSTart
driver.configure.rfSettings.lrStart.set()
```

No command help available

set_with_opc(*opc_timeout_ms: int = -1*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:LRSTart
driver.configure.rfSettings.lrStart.set_with_opc()
```

No command help available

Same as set, but waits for the operation to complete before continuing further. Use the RsCmwWlanMeas.utilities.opc_timeout_set() to set the timeout value.

param opc_timeout_ms
Maximum time to wait in milliseconds, valid only for this call.

6.1.4.6 Umargin<Connector>

RepCap Settings

```
# Range: Nr1 .. Nr4
rc = driver.configure.rfSettings.umargin.repcap_connector_get()
driver.configure.rfSettings.umargin.repcap_connector_set(repcap.Connector.Nr1)
```

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:RFSettings:UMARgin<antenna>
```

class UmarginCls

Umargin commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: Connector, default value after init: Connector.Nr1

get(*connector=Connector.Default*) → float

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:UMARgin<antenna>
value: float = driver.configure.rfSettings.umargin.get(connector = repcap.
↪Connector.Default)
```

Sets the margin that the measurement adds to the expected nominal power to determine the reference power. The reference power minus the external input attenuation must be within the power range of the selected input connector. Refer to the data sheet.

param connector
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Umargin')

return
user_margin: numeric Range: 0 dB to (34 dB + external attenuation - expected nominal power)

set(*user_margin: float*, *connector=Connector.Default*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:RFSettings:UMARgin<antenna>
driver.configure.rfSettings.umargin.set(user_margin = 1.0, connector = repcap.
↪Connector.Default)
```

Sets the margin that the measurement adds to the expected nominal power to determine the reference power. The reference power minus the external input attenuation must be within the power range of the selected input connector. Refer to the data sheet.

param user_margin
numeric Range: 0 dB to (34 dB + external attenuation - expected nominal power)

param connector
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Umargin')

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.rfSettings.umargin.clone()
```

6.1.5 Smimo

SCPI Command :

```
CONFigure:WLAN:MEASurement<instance>:SMIMo:CTUPle
```

class SmimoCls

Smimo commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get_ctuple() → ConnectorTuple

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:SMIMo:CTUPle
value: enums.ConnectorTuple = driver.configure.smimo.get_ctuple()
```

No command help available

return
con_tuple: No help available

set_ctuple(*con_tuple: ConnectorTuple*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:SMIMo:CTUPle
driver.configure.smimo.set_ctuple(con_tuple = enums.ConnectorTuple.CT12)
```

No command help available

param con_tuple
No help available

6.1.6 Tmode

SCPI Command :

```
CONFigure:WLAN:MEASurement<Instance>:TMODe:NOANtennas
```

class TmodeCls

Tmode commands group definition. 3 total commands, 1 Subgroups, 1 group commands

get_no_antennas() → int

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:TMODe:NOANtennas
value: int = driver.configure.tmode.get_no_antennas()
```

Gets/sets the number of TX antennas contributing to the MIMO training signal.

return
no_of_antennas: 1 to 8

set_no_antennas(*no_of_antennas: int*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<Instance>:TMODe:NOANtennas
driver.configure.tmode.set_no_antennas(no_of_antennas = 1)
```

Gets/sets the number of TX antennas contributing to the MIMO training signal.

param no_of_antennas
1 to 8

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.configure.tmode.clone()
```

Subgroups

6.1.6.1 File

SCPI Commands :

```
CONFigure:WLAN:MEASurement<instance>:TMODe:FILE:SAVE
CONFigure:WLAN:MEASurement<instance>:TMODe:FILE:DATE
```

class FileCls

File commands group definition. 2 total commands, 0 Subgroups, 2 group commands

get_date() → str

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:TMODe:FILE:DATE
value: str = driver.configure.tmode.file.get_date()
```

Returns the last modified date of the last saved training data file, if any.

return
file_date: string String with a formatted date or NAV

get_save() → str

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:TMODe:FILE:SAVE
value: str = driver.configure.tmode.file.get_save()
```

Saves the current training data to a file or queries the file name of the last saved training data file.

return
filename: string The name of the training data file - without path but including the file extension. Training data files are saved to the directory @USERDATA/MIMOData.

set_save(*filename: str*) → None

```
# SCPI: CONFigure:WLAN:MEASurement<instance>:TMODe:FILE:SAVE
driver.configure.tmode.file.set_save(filename = 'abc')
```

Saves the current training data to a file or queries the file name of the last saved training data file.

param filename
string The name of the training data file - without path but including the file extension. Training data files are saved to the directory @USERDATA/MIMOData.

6.2 MultiEval

SCPI Commands :

```
STOP:WLAN:MEASurement<Instance>:MEValuation
ABORt:WLAN:MEASurement<Instance>:MEValuation
INITiate:WLAN:MEASurement<Instance>:MEValuation
```

class MultiEvalCls

MultiEval commands group definition. 1011 total commands, 11 Subgroups, 3 group commands

abort(*opc_timeout_ms: int = -1*) → None

```
# SCPI: ABORt:WLAN:MEASurement<Instance>:MEValuation
driver.multiEval.abort()

    INTRO_CMD_HELP: Starts, stops, or aborts the measurement:

    - INITiate... starts or restarts the measurement. The measurement enters␣
↪the 'RUN' state.
    - STOP... halts the measurement immediately. The measurement enters the 'RDY
↪' state. Measurement results are kept. The resources remain allocated to the␣
↪measurement.
    - ABORt... halts the measurement immediately. The measurement enters the
↪'OFF' state. All measurement values are set to NAV. Allocated resources are␣
↪released.
```

Use FETCh...STATe? to query the current measurement state.

param opc_timeout_ms
Maximum time to wait in milliseconds, valid only for this call.

initiate(*opc_timeout_ms: int = -1*) → None

```
# SCPI: INITiate:WLAN:MEASurement<Instance>:MEValuation
driver.multiEval.initiate()

    INTRO_CMD_HELP: Starts, stops, or aborts the measurement:

    - INITiate... starts or restarts the measurement. The measurement enters␣
↪the 'RUN' state.
    - STOP... halts the measurement immediately. The measurement enters the 'RDY
↪' state. Measurement results are kept. The resources remain allocated to the␣
↪measurement.

```

Return the symbol clock error results in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas. Configure.MultiEval.ListPy.count.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
clock_err: No help available

6.2.1.1.17 Scount

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:MODulation:SCOunt
```

class ScountCls

Scount commands group definition. 1 total commands, 0 Subgroups, 1 group commands

fetch() → List[int]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:MODulation:SCOunt
value: List[int] = driver.multiEval.listPy.modulation.scount.fetch()
```

Returns the expired statistic counts for modulation results over all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return

```

Return the current, average, minimum, maximum and standard deviation single value results for DSSS signals for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.1.9 Maximum

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:MODulation:MAXimum
```

`class MaximumCls`

Maximum commands group definition. 1 total commands, 0 Subgroups, 1 group commands

`class FetchStruct`

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator' In list mode, a zero reliability indicator indicates that the results in all measured segments are valid. A non-zero value indicates that an error occurred in at least one of the measured segments.
- Seg_Reliability: int: decimal Reliability indicator for the segment. The meaning of the returned values is the same as for the common reliability indicator, see previous parameter.
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for modulation measurements exceeding the specified modulation limits. Range: 0 % to 100 %, Unit: %
- Mcs_Index: int: decimal Modulation and coding scheme index Range: 0 to 76
- Mod_Type: enums.ModulationTypeD: UNSPecified | BPSK14 | BPSK12 | BPSK34 | QPSK14 | QPSK12 | QPSK34 | 16Q14 | 16Q38 | 16Q12 | 16Q34 | 64Q12 | 64Q23 | 64Q34 | 64Q56 | 256Q34 | 256Q56 | 1KQ34 | 1KQ56 | BPSK | QPSK | 16Q | 64Q | 256Q | 1KQ Modulation scheme and coding rate UNSPecified: modulation unknown BPSK: BPSK, coding rate unknown BPSK12, BPSK34 (BPSKab) : BPSK, coding rate a/b BPSK14: BPSK, coding rate 1/2 DCM QPSK: QPSK, coding rate unknown QPSK12, QPSK34 (QPSKab) : QPSK, coding rate a/b QPSK14: QPSK, coding rate 1/2 DCM 16Q: 16-QAM, coding rate unknown 16Q12, 16Q34 (16Qab) : 16-QAM, coding rate a/b 16Q14: 16-QAM, coding rate 1/2 DCM 16Q38: 16-QAM, coding rate 3/4 DCM 64Q: 64-QAM, coding rate unknown 64Q12, 64Q23, 64Q34, 64Q56 (64Qab) : 64-QAM, coding rate a/b 256Q: 256-QAM, coding rate unknown 256Q34, 256Q56 (256Qab) : 256-QAM, coding rate a/b 1KQ: 1024-QAM, coding rate unknown 1KQ34, 1KQ56 (1KQab) : 1024-QAM, coding rate a/b
- Payload_Sym: int: decimal Number of OFDM symbols in the payload of the measured burst Range: 1 symbol to 1366 symbols, Unit: symbol
- Measured_Sym: int: decimal Number of OFDM symbols in the payload to be measured Range: 1 symbol to 1366 symbols, Unit: symbol
- Payload_Bytes: int: decimal Number of bytes in the payload of the measured burst. The results are only available for the standards up to Wi-Fi 4 (802.11n) , for Wi-Fi 5 standard (802.11ac) and later, NCAP is returned. Range: 1 byte to 4095 bytes, Unit: byte
- Guard_Interval: enums.GuardInterval: SHORt | LONG | GI08 | GI16 | GI32 SHORt, LONG: short or long guard interval (up to 802.11ac) GI08, GI16, GI32: 0.8 s, 1.6 s, and 3.2 s guard interval durations (for 802.11ax)

- Nof_Ss: int: decimal Number of spatial streams Range: 1 to 8
- No_Of_Sts: int: decimal Number of space-time streams Range: 1 to 8
- Burst_Rate: float: float Indicates the share of bursts of the selected modulation type 5_ModType in the bursts received. Unit: %
- Power_Backoff: float: float Minimum distance of signal power to reference level since the start of the measurement Range: -100 dB to 0 dB, Unit: dB
- Burst_Power: float: float RMS power of the measured burst Range: -100 dBm to 30 dBm, Unit: dBm
- Peak_Power: float: float Peak power of the measured burst Range: -100 dBm to 30 dBm, Unit: dBm
- Crest_Factor: float: float Range: 0 dB to 60 dB, Unit: dB
- Evm_All_Carr: float: float EVM for all, data, and pilot carriers Range: -100 dB to 0 dB, Unit: dB
- Evm_Data_Carr: float: float EVM for all, data, and pilot carriers Range: -100 dB to 0 dB, Unit: dB
- Evm_Pilot_Carr: float: float EVM for all, data, and pilot carriers Range: -100 dB to 0 dB, Unit: dB
- Freq_Error: float: float Center frequency error Range: -150 MHz to 150 MHz, Unit: Hz
- Clock_Error: float: float Symbol clock error Range: -125 ppm to 125 ppm, Unit: ppm
- Iq_Offset: float: float Range: -100 dB to 0 dB, Unit: dB
- Dc_Power: float: float Range: -100 dBm to 30 dBm, Unit: dBm
- Gain_Imbalance: float: float Range: -100 dB to 100 dB, Unit: dB
- Quad_Error: float: float Quadrature error Range: -180 deg to 180 deg, Unit: deg
- Ltf_Power: float: float Power of long training fields (LTF) portion Unit: dBm
- Data_Power: float: float Power of data portion Unit: dBm

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:MODulation:MAXimum
value: FetchStruct = driver.multiEval.listPy.segment.modulation.maximum.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return OFDM/OFDMA modulation single value results for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.1.10 Minimum

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:MODulation:MINimum
```

class MinimumCls

Minimum commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:MODulation:MINimum
value: FetchStruct = driver.multiEval.listPy.segment.modulation.minimum.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return OFDM/OFDMA modulation single value results for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.1.11 StandardDev

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:MODulation:SDEViation
```

class StandardDevCls

StandardDev commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:MODulation:SDEViation
value: FetchStruct = driver.multiEval.listPy.segment.modulation.standardDev.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return OFDM/OFDMA modulation single value results for segment <no> in list mode.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.2 TsMask

class TsMaskCls

TsMask commands group definition. 8 total commands, 5 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.listPy.segment.tsMask.clone()
```

Subgroups

6.2.1.2.2.1 Average

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:TSMask:AVERage
```

class AverageCls

Average commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator' In list mode, a zero reliability indicator indicates that the results in all measured segments are valid. A non-zero value indicates that an error occurred in at least one of the measured segments.
- Seg_Reliability: int: decimal Reliability indicator for the segment. The meaning of the returned values is the same as for the common reliability indicator, see previous parameter.
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for spectrum emission measurements exceeding the specified transmit spectrum mask limits. Range: 0 % to 100 % , Unit: %

- Margins: List[float]: No parameter help available

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:AVERage
value: FetchStruct = driver.multiEval.listPy.segment.tsMask.average.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return limit line margin results for segment <no> in list mode. A positive result indicates that the trace is located above the limit line, i.e. the limit is exceeded. Margins for the current, average, minimum, maximum and standard deviation results are returned.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.2.2 Current

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:TSMask:CURRent
```

class CurrentCls

Current commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator' In list mode, a zero reliability indicator indicates that the results in all measured segments are valid. A non-zero value indicates that an error occurred in at least one of the measured segments.
- Seg_Reliability: int: decimal Reliability indicator for the segment. The meaning of the returned values is the same as for the common reliability indicator, see previous parameter.
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for spectrum emission measurements exceeding the specified transmit spectrum mask limits. Range: 0 % to 100 % , Unit: %
- Margins: List[float]: No parameter help available

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:CURRent
value: FetchStruct = driver.multiEval.listPy.segment.tsMask.current.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return limit line margin results for segment <no> in list mode. A positive result indicates that the trace is located above the limit line, i.e. the limit is exceeded. Margins for the current, average, minimum, maximum and standard deviation results are returned.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.2.3 Frequency

class FrequencyCls

Frequency commands group definition. 4 total commands, 4 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.listPy.segment.tsMask.frequency.clone()
```

Subgroups

6.2.1.2.2.4 Average

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:FREQuency:AVERage
```

class AverageCls

Average commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator' In list mode, a zero reliability indicator indicates that the results in all measured segments are valid. A non-zero value indicates that an error occurred in at least one of the measured segments.
- Seg_Reliability: int: decimal Reliability indicator for the segment. The meaning of the returned values is the same as for the common reliability indicator, see previous parameter.
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for spectrum emission measurements exceeding the specified transmit spectrum mask limits. Range: 0 % to 100 % , Unit: %
- Frequencies: List[float]: No parameter help available

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:FREQuency:AVERage
value: FetchStruct = driver.multiEval.listPy.segment.tsMask.frequency.average.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return the X-positions of the limit line margins of the transmit spectrum mask for list mode, segment <no>. Positions for the current, average, minimum, maximum and standard deviation results are returned.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.2.5 Current

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:FREQuency:CURRent
```

class CurrentCls

Current commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator' In list mode, a zero reliability indicator indicates that the results in all measured segments are valid. A non-zero value indicates that an error occurred in at least one of the measured segments.
- Seg_Reliability: int: decimal Reliability indicator for the segment. The meaning of the returned values is the same as for the common reliability indicator, see previous parameter.
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for spectrum emission measurements exceeding the specified transmit spectrum mask limits. Range: 0 % to 100 % , Unit: %
- Frequencies: List[float]: No parameter help available

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:FREQuency:CURRent
value: FetchStruct = driver.multiEval.listPy.segment.tsMask.frequency.current.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return the X-positions of the limit line margins of the transmit spectrum mask for list mode, segment <no>. Positions for the current, average, minimum, maximum and standard deviation results are returned.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.2.6 Maximum

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:FREQuency:MAXimum
```

class MaximumCls

Maximum commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator' In list mode, a zero reliability indicator indicates that the results in all measured segments are valid. A non-zero value indicates that an error occurred in at least one of the measured segments.
- Seg_Reliability: int: decimal Reliability indicator for the segment. The meaning of the returned values is the same as for the common reliability indicator, see previous parameter.
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for spectrum emission measurements exceeding the specified transmit spectrum mask limits. Range: 0 % to 100 % , Unit: %
- Frequencies: List[float]: No parameter help available

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:FREQuency:MAXimum
value: FetchStruct = driver.multiEval.listPy.segment.tsMask.frequency.maximum.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return the X-positions of the limit line margins of the transmit spectrum mask for list mode, segment <no>. Positions for the current, average, minimum, maximum and standard deviation results are returned.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.2.7 Minimum

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:FREQuency:MINimum
```

class MinimumCls

Minimum commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator' In list mode, a zero reliability indicator indicates that the results in all measured segments are valid. A non-zero value indicates that an error occurred in at least one of the measured segments.
- Seg_Reliability: int: decimal Reliability indicator for the segment. The meaning of the returned values is the same as for the common reliability indicator, see previous parameter.
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for spectrum emission measurements exceeding the specified transmit spectrum mask limits. Range: 0 % to 100 % , Unit: %
- Frequencies: List[float]: No parameter help available

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:FREQuency:MINimum
value: FetchStruct = driver.multiEval.listPy.segment.tsMask.frequency.minimum.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return the X-positions of the limit line margins of the transmit spectrum mask for list mode, segment <no>. Positions for the current, average, minimum, maximum and standard deviation results are returned.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.2.8 Maximum

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:TSMask:MAXimum
```

class MaximumCls

Maximum commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator' In list mode, a zero reliability indicator indicates that the results in all measured segments are valid. A non-zero value indicates that an error occurred in at least one of the measured segments.
- Seg_Reliability: int: decimal Reliability indicator for the segment. The meaning of the returned values is the same as for the common reliability indicator, see previous parameter.
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for spectrum emission measurements exceeding the specified transmit spectrum mask limits. Range: 0 % to 100 % , Unit: %
- Margins: List[float]: No parameter help available

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:MAXimum
value: FetchStruct = driver.multiEval.listPy.segment.tsMask.maximum.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return limit line margin results for segment <no> in list mode. A positive result indicates that the trace is located above the limit line, i.e. the limit is exceeded. Margins for the current, average, minimum, maximum and standard deviation results are returned.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.2.2.9 Minimum

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>:TSMask:MINimum
```

class MinimumCls

Minimum commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator' In list mode, a zero reliability indicator indicates that the results in all measured segments are valid. A non-zero value indicates that an error occurred in at least one of the measured segments.
- Seg_Reliability: int: decimal Reliability indicator for the segment. The meaning of the returned values is the same as for the common reliability indicator, see previous parameter.
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for spectrum emission measurements exceeding the specified transmit spectrum mask limits. Range: 0 % to 100 % , Unit: %
- Margins: List[float]: No parameter help available

fetch(*segmentB=SegmentB.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SEGMent<segment>
↪:TSMask:MINimum
value: FetchStruct = driver.multiEval.listPy.segment.tsMask.minimum.
↪fetch(segmentB = repcap.SegmentB.Default)
```

Return limit line margin results for segment <no> in list mode. A positive result indicates that the trace is located above the limit line, i.e. the limit is exceeded. Margins for the current, average, minimum, maximum and standard deviation results are returned.

param segmentB
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.1.3 Sreliability

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SRELiability
```

class SreliabilityCls

Sreliability commands group definition. 1 total commands, 0 Subgroups, 1 group commands

fetch() → List[int]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:SRELiability
value: List[int] = driver.multiEval.listPy.sreliability.fetch()
```

Returns the segment reliability for all measured list mode segments. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
seg_reliabilities: decimal Comma-separated list of n values, one per measured segment
The meaning of the returned values is the same as for the common reliability indicator, see previous parameter.

6.2.1.4 TsMask

class TsMaskCls

TsMask commands group definition. 1 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.listPy.tsMask.clone()
```

Subgroups

6.2.1.4.1 Scount

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:TSMask:SCOunt
```

class ScountCls

Scount commands group definition. 1 total commands, 0 Subgroups, 1 group commands

fetch() → List[int]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:LIST:TSMask:SCOunt
value: List[int] = driver.multiEval.listPy.tsMask.scount.fetch()
```

Returns the expired statistic counts for transmit spectrum mask results over all segments in list mode. The values in curly brackets {} are specified for each active segment: {...}seg 1, {...}seg 2, ..., {...}seg n. The number of active segments n is determined by method RsCmwWlanMeas.Configure.MultiEval.ListPy.count.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
exp_stat_counts_tsm: No help available

6.2.2 Modulation

class ModulationCls

Modulation commands group definition. 144 total commands, 14 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.modulation.clone()
```

Subgroups

6.2.2.1 Acsiso

class AcsisoCls

Acsiso commands group definition. 12 total commands, 4 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.modulation.acsiso.clone()
```

Subgroups

6.2.2.1.1 Average

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:ACSiso:AVERage

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:AVERage
value: CalculateStruct = driver.multiEval.modulation.average.calculate()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:AVERage
value: ResultData = driver.multiEval.modulation.average.fetch()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:AVERage
value: ResultData = driver.multiEval.modulation.average.read()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.2.3 CfoDistribution

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:CFDistrib
FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:CFDistrib
CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:CFDistrib
```

class CfoDistributionCls

CfoDistribution commands group definition. 3 total commands, 0 Subgroups, 3 group commands

class ResultData

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Cfo_Percentage: float: float Percentage of CFO errors Unit: %
- Cfo_Outside: int: decimal Number of detected CFO errors
- Cfo_Total: int: decimal Number of measured CFOs

calculate() → ResultStatus2

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:CFDistrib
value: enums.ResultStatus2 = driver.multiEval.modulation.cfoDistribution.
↪calculate()
```

Return the scalar results for carrier frequency offset (CFO) error distribution. The results are only supported for 802. 11ax. Exceeding the limit has no impact on the stop 'On Limit Failure' condition or out-of-tolerance counter.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
cfo_percentage: float Percentage of CFO errors Unit: %

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:CFDistrib
value: ResultData = driver.multiEval.modulation.cfoDistribution.fetch()
```

Return the scalar results for carrier frequency offset (CFO) error distribution. The results are only supported for 802. 11ax. Exceeding the limit has no impact on the stop 'On Limit Failure' condition or out-of-tolerance counter.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:CFDistrib
value: ResultData = driver.multiEval.modulation.cfoDistribution.read()
```

Return the scalar results for carrier frequency offset (CFO) error distribution. The results are only supported for 802. 11ax. Exceeding the limit has no impact on the stop 'On Limit Failure' condition or out-of-tolerance counter.

return
structure: for return value, see the help for ResultData structure arguments.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.modulation.cmimo.psts.clone()
```

Subgroups

6.2.2.4.4.1 Average

SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:MODulation:CMIMo:PSTS:AVERage
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:CMIMo:PSTS:AVERage
```

class AverageCls

Average commands group definition. 2 total commands, 0 Subgroups, 2 group commands

fetch() → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<instance>
↪:MEValuation:MODulation:CMIMo:PSTS:AVERage
value: List[float] = driver.multiEval.modulation.cmimo.psts.average.fetch()
```

Return the single value RMS power results for the individual space-time streams. The current, average, minimum, maximum, and standard deviation results can be retrieved. For a meaningful result, set the spatial mapping matrix in the DUT to direct mapping. It causes a one-to-one mapping of space time streams to TX antennas. Thus a broken TX chain (no power) is detected and a damaged chain is identified by its bad EVM.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
power_sts_tx: float Eight values, one value per space-time stream Unit: dBm

read() → List[float]

```
# SCPI: READ:WLAN:MEASurement<instance>
↪:MEValuation:MODulation:CMIMo:PSTS:AVERage
value: List[float] = driver.multiEval.modulation.cmimo.psts.average.read()
```

Return the single value RMS power results for the individual space-time streams. The current, average, minimum, maximum, and standard deviation results can be retrieved. For a meaningful result, set the spatial mapping matrix in the DUT to direct mapping. It causes a one-to-one mapping of space time streams to TX antennas. Thus a broken TX chain (no power) is detected and a damaged chain is identified by its bad EVM.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:CURRent
value: CalculateStruct = driver.multiEval.modulation.current.calculate()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:CURRent
value: ResultData = driver.multiEval.modulation.current.fetch()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:AVERage
value: CalculateStruct = driver.multiEval.modulation.dsss.average.calculate()
```

Return the current, average, minimum, maximum and standard deviation single value results for DSSS signals. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:AVERage
value: ResultData = driver.multiEval.modulation.dsss.average.fetch()
```

Return the current, average, minimum, maximum and standard deviation single value results for DSSS signals. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:AVERage
value: ResultData = driver.multiEval.modulation.dsss.average.read()
```

Return the current, average, minimum, maximum and standard deviation single value results for DSSS signals. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.2.6.2 Current

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:CURRent
FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:CURRent
CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:CURRent
```

class CurrentCls

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:CURRent
value: CalculateStruct = driver.multiEval.modulation.dsss.current.calculate()
```

Return the current, average, minimum, maximum and standard deviation single value results for DSSS signals. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:CURRent
value: FetchStruct = driver.multiEval.modulation.dsss.current.fetch()
```

Return the current, average, minimum, maximum and standard deviation single value results for DSSS signals. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for FetchStruct structure arguments.

read() → ReadStruct

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:CURRent
value: ReadStruct = driver.multiEval.modulation.dsss.current.read()
```

Return the current, average, minimum, maximum and standard deviation single value results for DSSS signals. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ReadStruct structure arguments.

6.2.2.6.3 Maximum

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:MAXimum
FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:MAXimum
CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:MAXimum

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:DSSS:SDEViation
value: ResultData = driver.multiEval.modulation.dsss.standardDev.read()
```

Return the current, average, minimum, maximum and standard deviation single value results for DSSS signals. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.2.7 EvMagnitude

class EvMagnitudeCls

EvMagnitude commands group definition. 12 total commands, 5 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.modulation.evMagnitude.clone()
```

Subgroups

6.2.2.7.1 Average

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:AVERage
```

class AverageCls

Average commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'
- Evm_All_Users_All: List[float]: No parameter help available
- Evm_All_Users_Data: List[float]: No parameter help available
- Evm_All_Users_Pilot: List[float]: No parameter help available

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>
↪:MEValuation:MODulation:EVMagnitude:AVERage
value: FetchStruct = driver.multiEval.modulation.evMagnitude.average.fetch()
```

Return the single value results per user for OFDMA SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. There are current, average, minimum, maximum and standard deviation results.

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.2 Current

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:CURRent
```

class CurrentCls

Current commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'

- Evm_All_Users_All: List[float]: No parameter help available
- Evm_All_Users_Data: List[float]: No parameter help available
- Evm_All_Users_Pilot: List[float]: No parameter help available

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>
↪:MEValuation:MODulation:EVMagnitude:CURRent
value: FetchStruct = driver.multiEval.modulation.evMagnitude.current.fetch()
```

Return the single value results per user for OFDMA SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. There are current, average, minimum, maximum and standard deviation results.

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.3 Maximum

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:MAXimum
```

class MaximumCls

Maximum commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'
- Evm_All_Users_All: List[float]: No parameter help available
- Evm_All_Users_Data: List[float]: No parameter help available
- Evm_All_Users_Pilot: List[float]: No parameter help available

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>
↪:MEValuation:MODulation:EVMagnitude:MAXimum
value: FetchStruct = driver.multiEval.modulation.evMagnitude.maximum.fetch()
```

Return the single value results per user for OFDMA SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. There are current, average, minimum, maximum and standard deviation results.

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.4 StandardDev

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:SDEViation
```

class StandardDevCls

StandardDev commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'
- Evm_All_Users_All: List[float]: No parameter help available
- Evm_All_Users_Data: List[float]: No parameter help available
- Evm_All_Users_Pilot: List[float]: No parameter help available

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>
↪:MEValuation:MODulation:EVMagnitude:SDEViation
value: FetchStruct = driver.multiEval.modulation.evMagnitude.standardDev.fetch()
```

Return the single value results per user for OFDMA SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. There are current, average, minimum, maximum and standard deviation results.

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.5 User<User>

RepCap Settings

```
# Range: Nr1 .. Nr144
rc = driver.multiEval.modulation.evMagnitude.user.repcap_user_get()
driver.multiEval.modulation.evMagnitude.user.repcap_user_set(repcap.User.Nr1)
```

class UserCls

User commands group definition. 8 total commands, 5 Subgroups, 0 group commands Repeated Capability: User, default value after init: User.Nr1

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.modulation.evMagnitude.user.clone()
```

Subgroups

6.2.2.7.5.1 Average

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER<user>:AVERage
```

class AverageCls

Average commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'
- Evm_Vs_User_All: float: No parameter help available
- Evm_Vs_User_Data: float: No parameter help available
- Evm_Vs_User_Pilot: float: No parameter help available

fetch(*user=User.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER
↪<user>:AVERage
value: FetchStruct = driver.multiEval.modulation.evMagnitude.user.average.
↪fetch(user = repcap.User.Default)
```

Return the single value results for OFDMA SISO measurements for the specified user. For MIMO measurements, the stream/antenna-independent values are returned. There are current, average, minimum, maximum and standard deviation results.

param user
optional repeated capability selector. Default value: Nr1 (settable in the interface 'User')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.5.2 Current

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER<user>:CURRent
```

class CurrentCls

Current commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'
- Evm_Vs_User_All: float: No parameter help available
- Evm_Vs_User_Data: float: No parameter help available
- Evm_Vs_User_Pilot: float: No parameter help available

fetch(*user=User.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER
↪<user>:CURRent
value: FetchStruct = driver.multiEval.modulation.evMagnitude.user.current.
↪fetch(user = repcap.User.Default)
```

Return the single value results for OFDMA SISO measurements for the specified user. For MIMO measurements, the stream/antenna-independent values are returned. There are current, average, minimum, maximum and standard deviation results.

param user
optional repeated capability selector. Default value: Nr1 (settable in the interface 'User')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.5.3 Maximum

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER<user>:MAXimum
```

class MaximumCls

Maximum commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'
- Evm_Vs_User_All: float: No parameter help available
- Evm_Vs_User_Data: float: No parameter help available
- Evm_Vs_User_Pilot: float: No parameter help available

fetch(*user=User.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER
↪<user>:MAXimum
value: FetchStruct = driver.multiEval.modulation.evMagnitude.user.maximum.
↪fetch(user = repcap.User.Default)
```

Return the single value results for OFDMA SISO measurements for the specified user. For MIMO measurements, the stream/antenna-independent values are returned. There are current, average, minimum, maximum and standard deviation results.

param user
optional repeated capability selector. Default value: Nr1 (settable in the interface 'User')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.5.4 StandardDev

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER<user>:SDEViation
```

class StandardDevCls

StandardDev commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'
- Evm_Vs_User_All: float: No parameter help available
- Evm_Vs_User_Data: float: No parameter help available
- Evm_Vs_User_Pilot: float: No parameter help available

fetch(*user=User.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER
↪<user>:SDEViation
value: FetchStruct = driver.multiEval.modulation.evMagnitude.user.standardDev.
↪fetch(user = repcap.User.Default)
```

Return the single value results for OFDMA SISO measurements for the specified user. For MIMO measurements, the stream/antenna-independent values are returned. There are current, average, minimum, maximum and standard deviation results.

param user
optional repeated capability selector. Default value: Nr1 (settable in the interface 'User')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.5.5 Stream<Stream>

RepCap Settings

```
# Range: Nr1 .. Nr8
rc = driver.multiEval.modulation.evMagnitude.user.stream.repcap_stream_get()
driver.multiEval.modulation.evMagnitude.user.stream.repcap_stream_set(repcap.Stream.Nr1)
```

class StreamCls

Stream commands group definition. 4 total commands, 4 Subgroups, 0 group commands Repeated Capability: Stream, default value after init: Stream.Nr1

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.modulation.evMagnitude.user.stream.clone()
```

Subgroups

6.2.2.7.5.6 Average

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER<user>:STReam
↪<str>:AVERage
```

class AverageCls

Average commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'
- Evm_Vs_Stream_Vs_User_All: float: No parameter help available
- Evm_Vs_Stream_Vs_User_Data: float: No parameter help available
- Evm_Vs_Stream_Vs_User_Pilot: float: No parameter help available

fetch(*user=User.Default*, *stream=Stream.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER
↪<user>:STReam<str>:AVERage
value: FetchStruct = driver.multiEval.modulation.evMagnitude.user.stream.
↪average.fetch(user = repcap.User.Default, stream = repcap.Stream.Default)
```

Return the single value results for OFDMA MIMO measurements for the specified user and stream. There are current, average, minimum, maximum and standard deviation results.

param user
optional repeated capability selector. Default value: Nr1 (settable in the interface 'User')

param stream
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Stream')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.5.7 Current

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER<user>:STReam
↪<str>:CURRent
```

class CurrentCls

Current commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'
- Evm_Vs_Stream_Vs_User_All: float: No parameter help available
- Evm_Vs_Stream_Vs_User_Data: float: No parameter help available
- Evm_Vs_Stream_Vs_User_Pilot: float: No parameter help available

fetch(*user=User.Default*, *stream=Stream.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER
↪<user>:STReam<str>:CURRent
value: FetchStruct = driver.multiEval.modulation.evMagnitude.user.stream.
↪current.fetch(user = repcap.User.Default, stream = repcap.Stream.Default)
```

Return the single value results for OFDMA MIMO measurements for the specified user and stream. There are current, average, minimum, maximum and standard deviation results.

param user
optional repeated capability selector. Default value: Nr1 (settable in the interface 'User')

param stream
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Stream')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.5.8 Maximum

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER<user>:STReam
↪<str>:MAXimum
```

class MaximumCls

Maximum commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'

- Evm_Vs_Stream_Vs_User_All: float: No parameter help available
- Evm_Vs_Stream_Vs_User_Data: float: No parameter help available
- Evm_Vs_Stream_Vs_User_Pilot: float: No parameter help available

fetch(*user=User.Default*, *stream=Stream.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER
↪<user>:STReam<str>:MAXimum
value: FetchStruct = driver.multiEval.modulation.evMagnitude.user.stream.
↪maximum.fetch(user = repcap.User.Default, stream = repcap.Stream.Default)
```

Return the single value results for OFDMA MIMO measurements for the specified user and stream. There are current, average, minimum, maximum and standard deviation results.

param user
optional repeated capability selector. Default value: Nr1 (settable in the interface 'User')

param stream
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Stream')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.7.5.9 StandardDev

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER<user>:STReam
↪<str>:SDEViation
```

class StandardDevCls

StandardDev commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal See 'Reliability indicator'
- Evm_Vs_Stream_Vs_User_All: float: No parameter help available
- Evm_Vs_Stream_Vs_User_Data: float: No parameter help available
- Evm_Vs_Stream_Vs_User_Pilot: float: No parameter help available

fetch(*user=User.Default*, *stream=Stream.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:EVMagnitude:USER
↪<user>:STReam<str>:SDEViation
value: FetchStruct = driver.multiEval.modulation.evMagnitude.user.stream.
↪standardDev.fetch(user = repcap.User.Default, stream = repcap.Stream.Default)
```

Return the single value results for OFDMA MIMO measurements for the specified user and stream. There are current, average, minimum, maximum and standard deviation results.

param user
optional repeated capability selector. Default value: Nr1 (settable in the interface 'User')

param stream
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Stream')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.2.8 Maximum

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:MAXimum
FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:MAXimum
CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:MAXimum
```

`class MaximumCls`

Maximum commands group definition. 3 total commands, 0 Subgroups, 3 group commands

`class CalculateStruct`

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Out_Of_Tol: enums.ResultStatus2: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for modulation measurements exceeding the specified modulation limits. Range: 0 % to 100 %, Unit: %
- Mcs_Index: enums.ResultStatus2: decimal Modulation and coding scheme index Range: 0 to 76
- Mod_Type: enums.ResultStatus2: No parameter help available
- Payload_Sym: enums.ResultStatus2: decimal Number of OFDM symbols in the payload of the measured burst Range: 1 symbol to 1366 symbols, Unit: symbol
- Measured_Sym: enums.ResultStatus2: decimal Number of measured payload OFDM symbols Range: 1 symbol to 1366 symbols, Unit: symbol
- Payload_Bytes: enums.ResultStatus2: decimal Number of bytes in the payload of the measured burst. The results are only available for the standards up to Wi-Fi 4 (802.11n) , for Wi-Fi 5 standard (802.11ac) and later, NCAP is returned. Range: 1 byte to 4095 bytes, Unit: byte
- Guard_Interval: enums.ResultStatus2: SHORt | LONG | GI08 | GI16 | GI32 SHORt, LONG: short or long guard interval (up to 802.11ac) GI08, GI16, GI32: 0.8 s, 1.6 s, and 3.2 s guard interval durations (for 802.11ax)
- Nof_Ss: enums.ResultStatus2: decimal Number of spatial streams Range: 1 to 8
- No_Of_Sts: enums.ResultStatus2: decimal Number of space-time streams Range: 1 to 8
- Burst_Rate: enums.ResultStatus2: float If a modulation filter is used, the burst rate indicates the share of bursts of the selected modulation type in the bursts received. Otherwise, it returns 1. See also [CMDLINKRESOLVED Configure.Isignal#Modfilter CMDLINKRESOLVED]. Unit: %
- Power_Backoff: enums.ResultStatus2: float Minimum distance of signal power to reference level since the start of the measurement Range: -100 dB to 0 dB, Unit: dB

- Burst_Power: enums.ResultStatus2: float RMS power of the measured burst Range: -100 dBm to 30 dBm, Unit: dBm
- Peak_Power: enums.ResultStatus2: float Peak power of the measured burst Range: -100 dBm to 30 dBm, Unit: dBm
- Crest_Factor: enums.ResultStatus2: float Range: 0 dB to 60 dB, Unit: dB
- Evm_All_Carr: enums.ResultStatus2: float EVM for all carriers Range: -100 dB to 0 dB, Unit: dB
- Evm_Data_Carr: enums.ResultStatus2: float EVM for data carriers Range: -100 dB to 0 dB, Unit: dB
- Evm_Pilot_Carr: enums.ResultStatus2: float EVM for pilot carriers Range: -100 dB to 0 dB, Unit: dB
- Freq_Error: enums.ResultStatus2: float Center frequency error Range: -150 MHz to 150 MHz, Unit: Hz
- Clock_Error: enums.ResultStatus2: float Symbol clock error Range: -125 ppm to 125 ppm, Unit: ppm
- Iq_Offset: enums.ResultStatus2: float Range: -100 dB to 0 dB, Unit: dB
- Dc_Power: enums.ResultStatus2: float Power of the DC subcarriers Range: -100 dBm to 30 dBm, Unit: dBm
- Gain_Imbalance: enums.ResultStatus2: float Gain imbalance cannot be calculated if the spectrum is not symmetrical, e.g. for HT_TB and HE_MU. Range: -100 dB to 100 dB, Unit: dB
- Quad_Error: enums.ResultStatus2: float Quadrature error cannot be calculated if the spectrum is not symmetrical, e.g. for HT_TB and HE_MU. Range: -180 deg to 180 deg, Unit: deg
- Ltf_Power: enums.ResultStatus2: float Power of long training fields (LTF) portion Unit: dBm
- Data_Power: enums.ResultStatus2: float Power of data portion Unit: dBm
- Preamble_Power: enums.ResultStatus2: No parameter help available

class ResultData

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for modulation measurements exceeding the specified modulation limits. Range: 0 % to 100 %, Unit: %

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:MAXimum
value: CalculateStruct = driver.multiEval.modulation.maximum.calculate()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:MAXimum
value: ResultData = driver.multiEval.modulation.maximum.fetch()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values

described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:MAXimum
value: ResultData = driver.multiEval.modulation.maximum.read()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

calculate(*mimo=Mimo.Default*) → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<instance>:MEValuation:MODulation:MIMO<n>
↪:AVERage
value: CalculateStruct = driver.multiEval.modulation.mimo.average.
↪calculate(mimo = repcap.Mimo.Default)
```

Return the single value results for MIMO measurements. There are current, average, minimum, maximum and standard deviation results. For 80+80 MHz signals, the segment-independent values are returned. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch(*mimo=Mimo.Default*) → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:MIMO<n>:AVERage
value: ResultData = driver.multiEval.modulation.mimo.average.fetch(mimo =␣
↪repcap.Mimo.Default)
```

Return the single value results for MIMO measurements. There are current, average, minimum, maximum and standard deviation results. For 80+80 MHz signals, the segment-independent values are returned. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for ResultData structure arguments.

read(*mimo=Mimo.Default*) → ResultData

```
# SCPI: READ:WLAN:MEASurement<instance>:MEValuation:MODulation:MIMO<n>:AVERage
value: ResultData = driver.multiEval.modulation.mimo.average.read(mimo = repcap.
↪Mimo.Default)
```

Return the single value results for MIMO measurements. There are current, average, minimum, maximum and standard deviation results. For 80+80 MHz signals, the segment-independent values are returned. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for ResultData structure arguments.

calculate(*mimo=Mimo.Default*) → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<instance>:MEValuation:MODulation:MIMO<n>
↪:SEGMents:CURRent
value: CalculateStruct = driver.multiEval.modulation.mimo.segments.current.
↪calculate(mimo = repcap.Mimo.Default)
```

Return the segment-specific single value results for 80+80 MHz SISO measurements. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch(*mimo=Mimo.Default*) → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:MIMO<n>
↪:SEGMents:CURRent
value: ResultData = driver.multiEval.modulation.mimo.segments.current.
↪fetch(mimo = repcap.Mimo.Default)
```

Return the segment-specific single value results for 80+80 MHz SISO measurements. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for ResultData structure arguments.

read(*mimo=Mimo.Default*) → ResultData

```
# SCPI: READ:WLAN:MEASurement<instance>:MEValuation:MODulation:MIMO<n>
↪:SEGMents:CURRent
value: ResultData = driver.multiEval.modulation.mimo.segments.current.read(mimo␣
↪= repcap.Mimo.Default)
```

Return the segment-specific single value results for 80+80 MHz SISO measurements. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for ResultData structure arguments.

CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:MINimum
```

class MinimumCls

Minimum commands group definition. 3 total commands, 0 Subgroups, 3 group commands

class CalculateStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Out_Of_Tol: enums.ResultStatus2: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for modulation measurements exceeding the specified modulation limits. Range: 0 % to 100 %, Unit: %

- Mcs_Index: enums.ResultStatus2: decimal Modulation and coding scheme index Range: 0 to 76
- Mod_Type: enums.ResultStatus2: No parameter help available
- Payload_Sym: enums.ResultStatus2: decimal Number of OFDM symbols in the payload of the measured burst Range: 1 symbol to 1366 symbols, Unit: symbol
- Measured_Sym: enums.ResultStatus2: decimal Number of measured payload OFDM symbols Range: 1 symbol to 1366 symbols, Unit: symbol
- Payload_Bytes: enums.ResultStatus2: decimal Number of bytes in the payload of the measured burst. The results are only available for the standards up to Wi-Fi 4 (802.11n) , for Wi-Fi 5 standard (802.11ac) and later, NCAP is returned. Range: 1 byte to 4095 bytes, Unit: byte
- Guard_Interval: enums.ResultStatus2: SHORt | LONG | GI08 | GI16 | GI32 SHORt, LONG: short or long guard interval (up to 802.11ac) GI08, GI16, GI32: 0.8 s, 1.6 s, and 3.2 s guard interval durations (for 802.11ax)
- Nof_Ss: enums.ResultStatus2: decimal Number of spatial streams Range: 1 to 8
- No_Of_Sts: enums.ResultStatus2: decimal Number of space-time streams Range: 1 to 8
- Burst_Rate: enums.ResultStatus2: float If a modulation filter is used, the burst rate indicates the share of bursts of the selected modulation type in the bursts received. Otherwise, it returns 1. See also [CMDLINKRESOLVED Configure.Isignal#Modfilter CMDLINKRESOLVED]. Unit: %
- Power_Backoff: enums.ResultStatus2: float Minimum distance of signal power to reference level since the start of the measurement Range: -100 dB to 0 dB, Unit: dB
- Burst_Power: enums.ResultStatus2: float RMS power of the measured burst Range: -100 dBm to 30 dBm, Unit: dBm
- Peak_Power: enums.ResultStatus2: float Peak power of the measured burst Range: -100 dBm to 30 dBm, Unit: dBm
- Crest_Factor: enums.ResultStatus2: float Range: 0 dB to 60 dB, Unit: dB
- Evm_All_Carr: enums.ResultStatus2: float EVM for all carriers Range: -100 dB to 0 dB, Unit: dB
- Evm_Data_Carr: enums.ResultStatus2: float EVM for data carriers Range: -100 dB to 0 dB, Unit: dB
- Evm_Pilot_Carr: enums.ResultStatus2: float EVM for pilot carriers Range: -100 dB to 0 dB, Unit: dB
- Freq_Error: enums.ResultStatus2: float Center frequency error Range: -150 MHz to 150 MHz, Unit: Hz
- Clock_Error: enums.ResultStatus2: float Symbol clock error Range: -125 ppm to 125 ppm, Unit: ppm
- Iq_Offset: enums.ResultStatus2: float Range: -100 dB to 0 dB, Unit: dB
- Dc_Power: enums.ResultStatus2: float Power of the DC subcarriers Range: -100 dBm to 30 dBm, Unit: dBm
- Gain_Imbalance: enums.ResultStatus2: float Gain imbalance cannot be calculated if the spectrum is not symmetrical, e.g. for HT_TB and HE_MU. Range: -100 dB to 100 dB, Unit: dB
- Quad_Error: enums.ResultStatus2: float Quadrature error cannot be calculated if the spectrum is not symmetrical, e.g. for HT_TB and HE_MU. Range: -180 deg to 180 deg, Unit: deg
- Ltf_Power: enums.ResultStatus2: float Power of long training fields (LTF) portion Unit: dBm
- Data_Power: enums.ResultStatus2: float Power of data portion Unit: dBm
- Preamble_Power: enums.ResultStatus2: No parameter help available

`class ResultData`

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for modulation measurements exceeding the specified modulation limits. Range: 0 % to 100 %, Unit: %
- Mcs_Index: int: decimal Modulation and coding scheme index Range: 0 to 76
- Mod_Type: enums.ModulationTypeD: No parameter help available
- Payload_Sym: int: decimal Number of OFDM symbols in the payload of the measured burst Range: 1 symbol to 1366 symbols, Unit: symbol
- Measured_Sym: int: decimal Number of measured payload OFDM symbols Range: 1 symbol to 1366 symbols, Unit: symbol
- Payload_Bytes: int: decimal Number of bytes in the payload of the measured burst. The results are only available for the standards up to Wi-Fi 4 (802.11n) , for Wi-Fi 5 standard (802.11ac) and later, NCAP is returned. Range: 1 byte to 4095 bytes, Unit: byte
- Guard_Interval: enums.GuardInterval: SHORt | LONG | GI08 | GI16 | GI32 SHORt, LONG: short or long guard interval (up to 802.11ac) GI08, GI16, GI32: 0.8 s, 1.6 s, and 3.2 s guard interval durations (for 802.11ax)

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:MINimum
value: CalculateStruct = driver.multiEval.modulation.minimum.calculate()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:MINimum
value: ResultData = driver.multiEval.modulation.minimum.fetch()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:MINimum
value: ResultData = driver.multiEval.modulation.minimum.read()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.2.11 Ofdm

class OfdmCls

Ofdm commands group definition. 12 total commands, 4 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.modulation.ofdm.clone()
```

Subgroups

6.2.2.11.1 Average

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<instance>
↪:MEValuation:MODulation:SEGMents:CURRent
value: CalculateStruct = driver.multiEval.modulation.segments.current.
↪calculate()
```

Return the segment-specific single value results for 80+80 MHz SISO measurements. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:SEGMents:CURRent
value: ResultData = driver.multiEval.modulation.segments.current.fetch()
```

Return the segment-specific single value results for 80+80 MHz SISO measurements. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<instance>:MEValuation:MODulation:SEGMents:CURRent
value: ResultData = driver.multiEval.modulation.segments.current.read()
```

Return the segment-specific single value results for 80+80 MHz SISO measurements. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.2.12.3 Maximum

SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:MODulation:SEGMents:MAXimum
FETCh:WLAN:MEASurement<instance>:MEValuation:MODulation:SEGMents:MAXimum
CALCulate:WLAN:MEASurement<instance>:MEValuation:MODulation:SEGMents:MAXimum
```

6.2.2.14 StandardDev

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:SDEViation
FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:SDEViation
CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:SDEViation
```

class StandardDevCls

StandardDev commands group definition. 3 total commands, 0 Subgroups, 3 group commands

class CalculateStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Out_Of_Tol: enums.ResultStatus2: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for modulation measurements exceeding the specified modulation limits. Range: 0 % to 100 %, Unit: %
- Mcs_Index: enums.ResultStatus2: decimal Modulation and coding scheme index Range: 0 to 76
- Mod_Type: enums.ResultStatus2: No parameter help available
- Payload_Sym: enums.ResultStatus2: decimal Number of OFDM symbols in the payload of the measured burst Range: 1 symbol to 1366 symbols, Unit: symbol
- Measured_Sym: enums.ResultStatus2: decimal Number of measured payload OFDM symbols Range: 1 symbol to 1366 symbols, Unit: symbol
- Payload_Bytes: enums.ResultStatus2: decimal Number of bytes in the payload of the measured burst. The results are only available for the standards up to Wi-Fi 4 (802.11n) , for Wi-Fi 5 standard (802.11ac) and later, NCAP is returned. Range: 1 byte to 4095 bytes, Unit: byte
- Guard_Interval: enums.ResultStatus2: SHORt | LONG | GI08 | GI16 | GI32 SHORt, LONG: short or long guard interval (up to 802.11ac) GI08, GI16, GI32: 0.8 s, 1.6 s, and 3.2 s guard interval durations (for 802.11ax)
- Nof_Ss: enums.ResultStatus2: decimal Number of spatial streams Range: 1 to 8
- No_Of_Sts: enums.ResultStatus2: decimal Number of space-time streams Range: 1 to 8
- Burst_Rate: enums.ResultStatus2: float If a modulation filter is used, the burst rate indicates the share of bursts of the selected modulation type in the bursts received. Otherwise, it returns 1. See also [CMDLINKRESOLVED Configure.Isignal#Modfilter CMDLINKRESOLVED]. Unit: %
- Power_Backoff: enums.ResultStatus2: float Minimum distance of signal power to reference level since the start of the measurement Range: -100 dB to 0 dB, Unit: dB
- Burst_Power: enums.ResultStatus2: float RMS power of the measured burst Range: -100 dBm to 30 dBm, Unit: dBm
- Peak_Power: enums.ResultStatus2: float Peak power of the measured burst Range: -100 dBm to 30 dBm, Unit: dBm
- Crest_Factor: enums.ResultStatus2: float Range: 0 dB to 60 dB, Unit: dB
- Evm_All_Carr: enums.ResultStatus2: float EVM for all carriers Range: -100 dB to 0 dB, Unit: dB
- Evm_Data_Carr: enums.ResultStatus2: float EVM for data carriers Range: -100 dB to 0 dB, Unit: dB
- Evm_Pilot_Carr: enums.ResultStatus2: float EVM for pilot carriers Range: -100 dB to 0 dB, Unit: dB
- Freq_Error: enums.ResultStatus2: float Center frequency error Range: -150 MHz to 150 MHz, Unit: Hz
- Clock_Error: enums.ResultStatus2: float Symbol clock error Range: -125 ppm to 125 ppm, Unit: ppm
- Iq_Offset: enums.ResultStatus2: float Range: -100 dB to 0 dB, Unit: dB
- Dc_Power: enums.ResultStatus2: float Power of the DC subcarriers Range: -100 dBm to 30 dBm, Unit: dBm
- Gain_Imbalance: enums.ResultStatus2: float Gain imbalance cannot be calculated if the spectrum is not symmetrical, e.g. for HT_TB and HE_MU. Range: -100 dB to 100 dB, Unit: dB

- Quad_Error: enums.ResultStatus2: float Quadrature error cannot be calculated if the spectrum is not symmetrical, e.g. for HT_TB and HE_MU. Range: -180 deg to 180 deg, Unit: deg
- Ltf_Power: enums.ResultStatus2: float Power of long training fields (LTF) portion Unit: dBm
- Data_Power: enums.ResultStatus2: float Power of data portion Unit: dBm
- Preamble_Power: enums.ResultStatus2: No parameter help available

class ResultData

Response structure. Fields:

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:MODulation:SDEViation
value: CalculateStruct = driver.multiEval.modulation.standardDev.calculate()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:MODulation:SDEViation
value: ResultData = driver.multiEval.modulation.standardDev.fetch()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:MODulation:SDEViation
value: ResultData = driver.multiEval.modulation.standardDev.read()
```

Return the single value results for OFDM SISO measurements. For MIMO measurements, the stream/antenna-independent values are returned. For 80+80 MHz signals, the segment-independent values are returned. There are current, average, minimum, maximum and standard deviation results. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.3 Ofdma

class OfdmaCls

Ofdma commands group definition. 2 total commands, 2 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.ofdma.clone()
```

Subgroups

6.2.3.1 Info

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:OFDMa:INFO
```

class InfoCls

Info commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- No_Of_Users: int: decimal No. of users
- No_Of_Rus: int: decimal No. of resource units
- Guard_Interval: enums.GuardInterval: SHORt | LONG | GI08 | GI16 | GI32 SHORt, LONG: short or long guard interval (up to 802.11ac) GI08, GI16, GI32: 0.8 s, 1.6 s, and 3.2 s guard interval durations (for 802.11ax)
- Ltf_Size: enums.LtfSize: LTF1 | LTF2 | LTF4 1x LTF (3.2 s) , 2x LTF (6.4 s) , 4x LTF (12.8 s)

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:OFDMa:INFO
value: FetchStruct = driver.multiEval.ofdma.info.fetch()
```

Queries OFDMA common information.

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.3.2 Uinfo<User>

RepCap Settings

```
# Range: Nr1 .. Nr144
rc = driver.multiEval.ofdma.uinfo.repcap_user_get()
driver.multiEval.ofdma.uinfo.repcap_user_set(repcap.User.Nr1)
```

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:OFDMa:UINFo<user>
```

class UinfoCls

Uinfo commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: User, default value after init: User.Nr1

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Ru_Count: int: decimal Index of RUs of all sizes (users with STA-ID 2046 are included) .
- Ru_Index: int: decimal Index of the RUs only with the used size RUSize
- Ru_26_Index: int: decimal Index based on RU26
- Ru_Size: int: decimal RU size allocated by the user
- Mcs: int: decimal Modulation and coding scheme
- Dcm: int: decimal The value of DCM field
- Sta_Id: int: decimal The value of STA-ID field
- No_Of_Sts: int: decimal The value of NSTS field
- Tx_Bf: int: decimal The value of TxBF field
- Coding: enums.CodingType: BCC | LDPC Coding type

fetch(*user=User.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:OFDMa:UINFo<user>
value: FetchStruct = driver.multiEval.ofdma.uinfo.fetch(user = repcap.User.
↪Default)
```

Queries OFDMA user-specific information signaled in a HE signal field.

param user
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Uinfo')

return
structure: for return value, see the help for FetchStruct structure arguments.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.ofdma.uinfo.clone()
```

6.2.4 Power

class PowerCls

Power commands group definition. 12 total commands, 2 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.power.clone()
```

Subgroups

6.2.4.1 Runit<ResourceUnit>

RepCap Settings

```
# Range: Nr1 .. Nr144
rc = driver.multiEval.power.runit.repcap_resourceUnit_get()

```

class AverageCls

Average commands group definition. 3 total commands, 0 Subgroups, 3 group commands

class CalculateStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Power: enums.ResultStatus2: float Range: 0 µs to 10 µs, Unit: s

- Out_Of_Tol: enums.ResultStatus2: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for PVT measurements exceeding the specified power limit Range: 0 % to 100 % , Unit: %

class ResultData

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Power: float: float Range: 0 µs to 10 µs, Unit: s
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for PVT measurements exceeding the specified power limit Range: 0 % to 100 % , Unit: %

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:FEDGe:AVERage
value: CalculateStruct = driver.multiEval.powerVsTime.fallingEdge.average.
↪calculate()
```

Returns the current, average and maximum ramp durations of the power vs time measurement, for the falling edge (FEDGe) and rising edge (REDGe) . The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:FEDGe:AVERage
value: ResultData = driver.multiEval.powerVsTime.fallingEdge.average.fetch()
```

Returns the current, average and maximum ramp durations of the power vs time measurement, for the falling edge (FEDGe) and rising edge (REDGe) . The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:FEDGe:AVERage
value: ResultData = driver.multiEval.powerVsTime.fallingEdge.average.read()
```

Returns the current, average and maximum ramp durations of the power vs time measurement, for the falling edge (FEDGe) and rising edge (REDGe) . The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.5.1.2 Current

SCPI Commands :

```
CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:FEDGe:CURRent

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:AVERage
value: ResultData = driver.multiEval.powerVsTime.risingEdge.average.read()
```

Returns the current, average and maximum ramp durations of the power vs time measurement, for the falling edge (FEDGe) and rising edge (REDGe) . The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.5.3.2 Current

SCPI Commands :

```
CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:CURRent
READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:CURRent
FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:CURRent
```

class CurrentCls

Current commands group definition. 3 total commands, 0 Subgroups, 3 group commands

class CalculateStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Power: enums.ResultStatus2: float Range: 0 µs to 10 µs, Unit: s
- Out_Of_Tol: enums.ResultStatus2: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for PVT measurements exceeding the specified power limit Range: 0 % to 100 % , Unit: %

class ResultData

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Power: float: float Range: 0 µs to 10 µs, Unit: s
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for PVT measurements exceeding the specified power limit Range: 0 % to 100 % , Unit: %

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:CURRent
value: CalculateStruct = driver.multiEval.powerVsTime.risingEdge.current.
↪calculate()
```

Returns the current, average and maximum ramp durations of the power vs time measurement, for the falling edge (FEDGe) and rising edge (REDGe) . The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:CURRent
value: ResultData = driver.multiEval.powerVsTime.risingEdge.current.fetch()
```

Returns the current, average and maximum ramp durations of the power vs time measurement, for the falling edge (FEDGe) and rising edge (REDGe) . The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:CURRent
value: ResultData = driver.multiEval.powerVsTime.risingEdge.current.read()
```

Returns the current, average and maximum ramp durations of the power vs time measurement, for the falling edge (FEDGe) and rising edge (REDGe) . The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.5.3.3 Maximum

SCPI Commands :

```
CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:MAXimum
READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:MAXimum
FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:MAXimum
```

class MaximumCls

Maximum commands group definition. 3 total commands, 0 Subgroups, 3 group commands

class CalculateStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Power: enums.ResultStatus2: float Range: 0 µs to 10 µs, Unit: s
- Out_Of_Tol: enums.ResultStatus2: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for PVT measurements exceeding the specified power limit Range: 0 % to 100 % , Unit: %

class ResultData

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Power: float: float Range: 0 µs to 10 µs, Unit: s
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for PVT measurements exceeding the specified power limit Range: 0 % to 100 % , Unit: %

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:MAXimum
value: CalculateStruct = driver.multiEval.powerVsTime.risingEdge.maximum.
↪calculate()
```

Returns the current, average and maximum ramp durations of the power vs time measurement, for the falling edge (FEDGe) and rising edge (REDGe) . The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:MAXimum
value: ResultData = driver.multiEval.powerVsTime.risingEdge.maximum.fetch()
```

Returns the current, average and maximum ramp durations of the power vs time measurement, for the falling edge (FEDGe) and rising edge (REDGe) . The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:REDGe:MAXimum
value: ResultData = driver.multiEval.powerVsTime.risingEdge.maximum.read()
```

Returns the current, average and maximum ramp durations of the power vs time measurement, for the falling edge (FEDGe) and rising edge (REDGe) . The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.5.4 TeDistribution

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TEDistrib
FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TEDistrib
CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TEDistrib
```

class TeDistributionCls

TeDistribution commands group definition. 3 total commands, 0 Subgroups, 3 group commands

class CalculateStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Te_Percentage: enums.ResultStatus2: float Percentage of TEs Unit: %
- Te_Outside: enums.ResultStatus2: decimal Number of detected TEs
- Te_Total: enums.ResultStatus2: decimal Number of measured values

class ResultData

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Te_Percentage: float: float Percentage of TEs Unit: %
- Te_Outside: int: decimal Number of detected TEs
- Te_Total: int: decimal Number of measured values

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TEDistrib
value: CalculateStruct = driver.multiEval.powerVsTime.teDistribution.calculate()
```

Return the scalar results for timing error (TE) distribution. The commands are only supported for OFDM standards. Exceeding the limit has no impact on the stop 'On Limit Failure' condition or out-of-tolerance counter.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TEDistrib
value: ResultData = driver.multiEval.powerVsTime.teDistribution.fetch()
```

Return the scalar results for timing error (TE) distribution. The commands are only supported for OFDM standards. Exceeding the limit has no impact on the stop 'On Limit Failure' condition or out-of-tolerance counter.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TEDistrib
value: ResultData = driver.multiEval.powerVsTime.teDistribution.read()
```

Return the scalar results for timing error (TE) distribution. The commands are only supported for OFDM standards. Exceeding the limit has no impact on the stop 'On Limit Failure' condition or out-of-tolerance counter.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.5.5 Terror

class TerrorCls

Terror commands group definition. 30 total commands, 6 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.powerVsTime.terror.clone()
```

Subgroups

6.2.5.5.1 Average

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:AVERage
FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:AVERage
CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:AVERage
```

class AverageCls

Average commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate() → ResultStatus2

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:AVERage
value: enums.ResultStatus2 = driver.multiEval.powerVsTime.terror.average.
↪calculate()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_aver: float Unit: s

fetch() → float

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:AVERage
value: float = driver.multiEval.powerVsTime.terror.average.fetch()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_aver: float Unit: s

read() → float

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:AVERage
value: float = driver.multiEval.powerVsTime.terror.average.read()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_aver: float Unit: s

6.2.5.5.2 Current

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:CURRent
FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:CURRent
CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:CURRent
```

class CurrentCls

Current commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate() → ResultStatus2

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:CURRent
value: enums.ResultStatus2 = driver.multiEval.powerVsTime.terror.current.
↪calculate()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_curr: float Unit: s

fetch() → float

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:CURRent
value: float = driver.multiEval.powerVsTime.terror.current.fetch()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_curr: float Unit: s

read() → float

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:CURRent
value: float = driver.multiEval.powerVsTime.terror.current.read()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_curr: float Unit: s

6.2.5.5.3 Maximum

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MAXimum
FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MAXimum
CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MAXimum
```

class MaximumCls

Maximum commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate() → ResultStatus2

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MAXimum
value: enums.ResultStatus2 = driver.multiEval.powerVsTime.terror.maximum.
↪calculate()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_max: float Unit: s

fetch() → float

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MAXimum
value: float = driver.multiEval.powerVsTime.terror.maximum.fetch()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_max: float Unit: s

read() → float

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MAXimum
value: float = driver.multiEval.powerVsTime.terror.maximum.read()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MIMO<n>
↪:SDEViation
value: float = driver.multiEval.powerVsTime.terror.mimo.standardDev.fetch(mimo␣
↪= repcap.Mimo.Default)
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time MIMO measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
timing_error_sdev: No help available

read(*mimo=Mimo.Default*) → float

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MIMO<n>
↪:SDEViation
value: float = driver.multiEval.powerVsTime.terror.mimo.standardDev.read(mimo =␣
↪repcap.Mimo.Default)
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time MIMO measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
timing_error_sdev: No help available

6.2.5.5.5 Minimum

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MINimum
FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MINimum
CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MINimum
```

class MinimumCls

Minimum commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate() → ResultStatus2

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MINimum
value: enums.ResultStatus2 = driver.multiEval.powerVsTime.terror.minimum.
↪calculate()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_min: float Unit: s

fetch() → float

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MINimum
value: float = driver.multiEval.powerVsTime.terror.minimum.fetch()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_min: float Unit: s

read() → float

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:MINimum
value: float = driver.multiEval.powerVsTime.terror.minimum.read()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_min: float Unit: s

6.2.5.5.6 StandardDev

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:SDEViation
FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:SDEViation
CALCulate:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:SDEViation
```

class StandardDevCls

StandardDev commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate() → ResultStatus2

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>
↪:MEValuation:PVTime:TERRor:SDEViation
value: enums.ResultStatus2 = driver.multiEval.powerVsTime.terror.standardDev.
↪calculate()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_sdev: float Unit: s

fetch() → float

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:SDEViation
value: float = driver.multiEval.powerVsTime.terror.standardDev.fetch()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_sdev: float Unit: s

read() → float

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:PVTime:TERRor:SDEViation
value: float = driver.multiEval.powerVsTime.terror.standardDev.read()
```

Return the current, average, minimum, maximum and standard deviation timing error single value results of the power vs time measurement. The commands are only supported for OFDM standards. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
timing_error_sdev: float Unit: s

6.2.6 Sinfo

class SinfoCls

Sinfo commands group definition. 95 total commands, 7 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.clone()
```

Subgroups

6.2.6.1 Heb

class HebCls

Heb commands group definition. 14 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.heb.clone()
```

Subgroups

6.2.6.1.1 Channel<Channel>

RepCap Settings

```
# Range: Nr1 .. Nr2
rc = driver.multiEval.sinfo.heb.channel.repcap_channel_get()
driver.multiEval.sinfo.heb.channel.repcap_channel_set(repcap.Channel.Nr1)
```

class ChannelCls

Channel commands group definition. 14 total commands, 2 Subgroups, 0 group commands Repeated Capability: Channel, default value after init: Channel.Nr1

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.heb.channel.clone()
```

Subgroups

6.2.6.1.1.1 Cfield

class CfieldCls

Cfield commands group definition. 4 total commands, 4 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.heb.channel.cfield.clone()
```

Subgroups

6.2.6.1.1.2 Crc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:CFIeld:CRC
```

class CrcCls

Crc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 4.294967295E+9

fetch(*channel=Channel.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:CFIeld:CRC
value: FetchStruct = driver.multiEval.sinfo.heb.channel.cfield.crc.
↪fetch(channel = repcap.Channel.Default)
```

Queries the value of CRC field signaled for the channel in HE-SIG-B common field for multi user MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.3 Cru

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:CFIeld:CRU
```

class CruCls

Cru commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'

- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 4.294967295E+9

fetch(*channel=Channel.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:CFIeld:CRU
value: FetchStruct = driver.multiEval.sinfo.heb.channel.cfield.cru.
↪fetch(channel = repcap.Channel.Default)
```

Queries the value of Center 26-tone RU field signaled for the channel in HE-SIG-B common field for multi user MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.4 RuAllocation

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:CFIeld:RUALlocation
```

class RuAllocationCls

RuAllocation commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 4.294967295E+9

fetch(*channel=Channel.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:CFIeld:RUALlocation
value: FetchStruct = driver.multiEval.sinfo.heb.channel.cfield.ruAllocation.
↪fetch(channel = repcap.Channel.Default)
```

Queries the value of RU Allocation field signaled for the channel in HE-SIG-B common field for multi user MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.5 Tail

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:CFIeld:TAIL
```

class TailCls

Tail commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 4.294967295E+9

fetch(*channel=Channel.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:CFIeld:TAIL
value: FetchStruct = driver.multiEval.sinfo.heb.channel.cfield.tail.
↪fetch(channel = repcap.Channel.Default)
```

Queries the value of Tail field signaled for the channel in HE-SIG-B common field for multi user MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.6 Ufield<UserIx>

RepCap Settings

```
# Range: Nr1 .. Nr144
rc = driver.multiEval.sinfo.heb.channel.ufield.repcap_userIx_get()
driver.multiEval.sinfo.heb.channel.ufield.repcap_userIx_set(repcap.UserIx.Nr1)
```

class UfieldCls

Ufield commands group definition. 10 total commands, 10 Subgroups, 0 group commands Repeated Capability: UserIx, default value after init: UserIx.Nr1

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.heb.channel.ufield.clone()
```

Subgroups

6.2.6.1.1.7 Coding

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:UFIeld<usr_
↪index>:CODing
```

class CodingCls

Coding commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 2047

fetch(*channel=Channel.Default*, *userIx=UserIx.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:UFIeld<usr_index>:CODing
value: FetchStruct = driver.multiEval.sinfo.heb.channel.ufield.coding.
↪fetch(channel = repcap.Channel.Default, userIx = repcap.UserIx.Default)
```

Queries the value of Coding field signaled for the channel and user in HE-SIG-B user-specific field for multi user MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

param userIx
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Ufield')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.8 Crc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:UFIeld<usr_
↪index>:CRC
```

class CrcCls

Crc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 2047

fetch(*channel=Channel.Default*, *userIx=UserIx.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:UFIeld<usr_index>:CRC
value: FetchStruct = driver.multiEval.sinfo.heb.channel.ufield.crc.
↪fetch(channel = repcap.Channel.Default, userIx = repcap.UserIx.Default)
```

Queries the value of CRC field signaled for the channel and user in HE-SIG-B user-specific field for multi user MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

param userIx
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Ufield')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.9 Dcm

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:UFIeld<usr_
↪index>:DCM
```

class DcmCls

Dcm commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string

- Value_Dec: int: decimal Range: 0 to 2047

fetch(*channel=Channel.Default*, *userIx=UserIx.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:UFIeld<usr_index>:DCM
value: FetchStruct = driver.multiEval.sinfo.heb.channel.ufield.dcm.
↪fetch(channel = repcap.Channel.Default, userIx = repcap.UserIx.Default)
```

Queries the value of DCM field signaled for the channel and user in HE-SIG-B user-specific field for SU-MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

param userIx
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Ufield')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.10 Mcs

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:UFIeld<usr_
↪index>:MCS
```

class McsCls

Mcs commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 2047

fetch(*channel=Channel.Default*, *userIx=UserIx.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:UFIeld<usr_index>:MCS
value: FetchStruct = driver.multiEval.sinfo.heb.channel.ufield.mcs.
↪fetch(channel = repcap.Channel.Default, userIx = repcap.UserIx.Default)
```

Queries the value of MCS field signaled for the channel and user in HE-SIG-B user-specific field for MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

param userIx
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Ufield')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.11 Nsts

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:UFIeld<usr_
↪index>:NSTS
```

class NstsCls

Nsts commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 2047

fetch(*channel=Channel.Default*, *userIx=UserIx.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:UFIeld<usr_index>:NSTS
value: FetchStruct = driver.multiEval.sinfo.heb.channel.ufield.nsts.
↪fetch(channel = repcap.Channel.Default, userIx = repcap.UserIx.Default)
```

Queries the value of NSTS field signaled for the channel and user in HE-SIG-B user-specific field for SU-MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

param userIx
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Ufield')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.12 Reserved

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:UFIeld<usr_
↪index>:REServed
```

class ReservedCls

Reserved commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 2047

fetch(*channel=Channel.Default*, *userIx=UserIx.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:UFIeld<usr_index>:REServed
value: FetchStruct = driver.multiEval.sinfo.heb.channel.ufield.reserved.
↪fetch(channel = repcap.Channel.Default, userIx = repcap.UserIx.Default)
```

Queries the value of Reserved field signaled for the channel and user in HE-SIG-B user-specific field for multi user MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

param userIx
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Ufield')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.13 SpaConfig

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:UFIeld<usr_
↪index>:SPAConfig
```

class SpaConfigCls

SpaConfig commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 2047

fetch(*channel=Channel.Default*, *userIx=UserIx.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:UFIeld<usr_index>:SPAConfig
value: FetchStruct = driver.multiEval.sinfo.heb.channel.ufield.spaConfig.
↪fetch(channel = repcap.Channel.Default, userIx = repcap.UserIx.Default)
```

Queries the value of Spatial Configuration field signaled for the channel and user in HE-SIG-B user-specific field for multi user MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

param userIx
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Ufield')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.14 StaId

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:UFIeld<usr_
↪index>:STAid
```

class StaIdCls

StaId commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 2047

fetch(*channel=Channel.Default*, *userIx=UserIx.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:UFIeld<usr_index>:STAid
value: FetchStruct = driver.multiEval.sinfo.heb.channel.ufield.staId.
↪fetch(channel = repcap.Channel.Default, userIx = repcap.UserIx.Default)
```

Queries the value of STA-ID field signaled for the channel and user in HE-SIG-B user-specific field for MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

param userIx
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Ufield')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.15 Tail

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:UFIeld<usr_
↪index>:TAIL
```

class TailCls

Tail commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 2047

fetch(*channel=Channel.Default*, *userIx=UserIx.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:UFIeld<usr_index>:TAIL
value: FetchStruct = driver.multiEval.sinfo.heb.channel.ufield.tail.
↪fetch(channel = repcap.Channel.Default, userIx = repcap.UserIx.Default)
```

Queries the value of Tail field signaled for the channel and user in HE-SIG-B user-specific field for multi user MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

param userIx
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Ufield')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.1.1.16 TxBeamforming

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>:UFIeld<usr_
↪index>:TXBeamform
```

class TxBeamformingCls

TxBeamforming commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string

- Value_Dec: int: decimal Range: 0 to 2047

fetch(*channel=Channel.Default*, *userIx=UserIx.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEB:CHANnel<ch_index>
↪:UFIeld<usr_index>:TXBeamform
value: FetchStruct = driver.multiEval.sinfo.heb.channel.ufield.txBeamforming.
↪fetch(channel = repcap.Channel.Default, userIx = repcap.UserIx.Default)
```

Queries the value of Tx Beamforming field signaled for the channel and user in HE-SIG-B user-specific field for SU-MIMO.

param channel
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Channel')

param userIx
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Ufield')

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2 Hemu

class HemuCls

Hemu commands group definition. 19 total commands, 19 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.hemu.clone()
```

Subgroups

6.2.6.2.1 Bdcm

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:BDCM
```

class BdcmCls

Bdcm commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:BDCM
value: FetchStruct = driver.multiEval.sinfo.hemu.bdcm.fetch()
```

Queries the value of SIGB DCM field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.2 Bmcs

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:BMCS
```

class BmcsCls

Bmcs commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:BMCS
value: FetchStruct = driver.multiEval.sinfo.hemu.bmcs.fetch()
```

Queries the value of SIGB MCS field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.3 BssColor

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:BSSColor
```

class BssColorCls

BssColor commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:BSSColor
value: FetchStruct = driver.multiEval.sinfo.hemu.bssColor.fetch()
```

Queries the value of BSS Color field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.4 Bw

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:BW
```

class BwCls

Bw commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:BW
value: FetchStruct = driver.multiEval.sinfo.hemu.bw.fetch()
```

Queries the value of Bandwidth field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.5 Crc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:CRC
```

class CrcCls

Crc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

- Check: bool: ON | OFF | 1 | 0

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:CRC
value: FetchStruct = driver.multiEval.sinfo.hemu.crc.fetch()
```

Queries the value of CRC field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.6 Doppler

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:DOPPler
```

class DopplerCls

Doppler commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:DOPPler
value: FetchStruct = driver.multiEval.sinfo.hemu.doppler.fetch()
```

Queries the value of Doppler field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.7 GiltfSize

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:GILTfsize
```

class GiltfSizeCls

GiltfSize commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string

- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:GILTfsize
value: FetchStruct = driver.multiEval.sinfo.hemu.giltfSize.fetch()
```

Queries the value of GI+LTF Size field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.8 Ldpc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:LDPC
```

class LdpcCls

Ldpc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:LDPC
value: FetchStruct = driver.multiEval.sinfo.hemu.ldpc.fetch()
```

Queries the value of LPDC Extra Symbol Segment field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.9 NltfSymbols

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:NLTFsymbols
```

class NltfSymbolsCls

NltfSymbols commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string

- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:NLTFsymbols
value: FetchStruct = driver.multiEval.sinfo.hemu.nltfSymbols.fetch()
```

Queries the value of Number of HE-LTF Symbols And Midamble Periodicity field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.10 NsbSymbols

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:NSBSymbols
```

class NsbSymbolsCls

NsbSymbols commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:NSBSymbols
value: FetchStruct = driver.multiEval.sinfo.hemu.nsbSymbols.fetch()
```

Queries the value of Number Of HE-SIG-B Symbols Or MU-MIMO Users field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.11 PeDisambiguity

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:PEDisambig
```

class PeDisambiguityCls

PeDisambiguity commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'

- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:PEDisambig
value: FetchStruct = driver.multiEval.sinfo.hemu.peDisambiguity.fetch()
```

Queries the value of PE Disambiguity field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.12 PfecPadding

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:PFECpadding
```

class PfecPaddingCls

PfecPadding commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:PFECpadding
value: FetchStruct = driver.multiEval.sinfo.hemu.pfecPadding.fetch()
```

Queries the value of Pre-FEC Padding Factor field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.13 Reserved

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:REServed
```

class ReservedCls

Reserved commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:REServed
value: FetchStruct = driver.multiEval.sinfo.hemu.reserved.fetch()
```

Queries the value of Reserved field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.14 SbCompress

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:SBCompress
```

class SbCompressCls

SbCompress commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:SBCompress
value: FetchStruct = driver.multiEval.sinfo.hemu.sbCompress.fetch()
```

Queries the value of SIGB Compression field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.15 SpatialReuse

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:SPATialreuse
```

class SpatialReuseCls

SpatialReuse commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:SPATialreuse
value: FetchStruct = driver.multiEval.sinfo.hemu.spatialReuse.fetch()
```

Queries the value of Spatial Reuse field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.16 Stbc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:STBC
```

class StbcCls

Stbc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:STBC
value: FetchStruct = driver.multiEval.sinfo.hemu.stbc.fetch()
```

Queries the value of STBC field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.17 Tail

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:TAIL
```

class TailCls

Tail commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:TAIL
value: FetchStruct = driver.multiEval.sinfo.hemu.tail.fetch()
```

Queries the value of Tail field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.18 TxOp

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:TXOP
```

class TxOpCls

TxOp commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:TXOP
value: FetchStruct = driver.multiEval.sinfo.hemu.txOp.fetch()
```

Queries the value of TXOP field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.2.19 UlDl

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:ULDL
```

class UlDlCls

UlDl commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HEMU:ULDL
value: FetchStruct = driver.multiEval.sinfo.hemu.ulDl.fetch()
```

Queries the value of UL/DL field signaled in HE signal field for multi user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3 Hesu

class HesuCls

Hesu commands group definition. 21 total commands, 21 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.hesu.clone()
```

Subgroups

6.2.6.3.1 BeamChange

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:BEAMchange
```

class BeamChangeCls

BeamChange commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:BEAMchange
value: FetchStruct = driver.multiEval.sinfo.hesu.beamChange.fetch()
```

Queries the value of Beam Change field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.2 BssColor

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:BSSColor
```

class BssColorCls

BssColor commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:BSSColor
value: FetchStruct = driver.multiEval.sinfo.hesu.bssColor.fetch()
```

Queries the value of BSS Color field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.3 Bw

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:BW
```

class BwCls

Bw commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:BW
value: FetchStruct = driver.multiEval.sinfo.hesu.bw.fetch()
```

Queries the value of Bandwidth field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.4 Coding

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:CODing
```

class CodingCls

Coding commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:CODing
value: FetchStruct = driver.multiEval.sinfo.hesu.coding.fetch()
```

Queries the value of Coding field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.5 Crc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:CRC
```

class CrcCls

Crc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:CRC
value: FetchStruct = driver.multiEval.sinfo.hesu.crc.fetch()
```

Queries the value of CRC field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.6 Dcm

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:DCM
```

class DcmCls

Dcm commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:DCM
value: FetchStruct = driver.multiEval.sinfo.hesu.dcm.fetch()
```

Queries the value of DCM field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.7 Doppler

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:DOPPler
```

class DopplerCls

Doppler commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:DOPPler
value: FetchStruct = driver.multiEval.sinfo.hesu.doppler.fetch()
```

Queries the value of Doppler field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.8 FormatPy

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:FORMat
```

class FormatPyCls

FormatPy commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:FORMat
value: FetchStruct = driver.multiEval.sinfo.hesu.formatPy.fetch()
```

Queries the value of Format field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.9 GiltfSize

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:GILTfsize
```

class GiltfSizeCls

GiltfSize commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:GILTfsize
value: FetchStruct = driver.multiEval.sinfo.hesu.giltfSize.fetch()
```

Queries the value of GI+LTF Size field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.10 Ldpc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:LDPC
```

class LdpcCls

Ldpc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:LDPC
value: FetchStruct = driver.multiEval.sinfo.hesu.ldpc.fetch()
```

Queries the value of LDPC Extra Symbol Segment field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.11 Mcs

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:MCS
```

class McsCls

Mcs commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:MCS
value: FetchStruct = driver.multiEval.sinfo.hesu.mcs.fetch()
```

Queries the value of MCS field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.12 Nsts

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:NSTS
```

class NstsCls

Nsts commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:NSTS
value: FetchStruct = driver.multiEval.sinfo.hesu.nsts.fetch()
```

Queries the value of Nsts And Midamble Periodicity field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.13 PeDisambiguity

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:PEDisambig
```

class PeDisambiguityCls

PeDisambiguity commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:PEDisambig
value: FetchStruct = driver.multiEval.sinfo.hesu.peDisambiguity.fetch()
```

Queries the value of PE Disambiguity field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.14 PfecPadding

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:PFECpadding
```

class PfecPaddingCls

PfecPadding commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:PFECpadding
value: FetchStruct = driver.multiEval.sinfo.hesu.pfecPadding.fetch()
```

Queries the value of Pre-FEC Padding Factor field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.15 Reserved<Reserved>

RepCap Settings

```
# Range: Nr1 .. Nr3
rc = driver.multiEval.sinfo.hesu.reserved.repcap_reserved_get()
driver.multiEval.sinfo.hesu.reserved.repcap_reserved_set(repcap.Reserved.Nr1)
```

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:REServed<index>
```

class ReservedCls

Reserved commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: Reserved, default value after init: Reserved.Nr1

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch(*reserved=Reserved.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:REServed<index>
value: FetchStruct = driver.multiEval.sinfo.hesu.reserved.fetch(reserved =␣
↪repcap.Reserved.Default)
```

Queries the value of Reserved field signaled in HE signal field for single user MIMO (HE-SIG-A) .

param reserved
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Reserved')

return
structure: for return value, see the help for FetchStruct structure arguments.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.hesu.reserved.clone()
```

6.2.6.3.16 SpatialReuse

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:SPATialreuse
```

class SpatialReuseCls

SpatialReuse commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:SPATialreuse
value: FetchStruct = driver.multiEval.sinfo.hesu.spatialReuse.fetch()
```

Queries the value of Spatial Reuse field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.17 Stbc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:STBC
```

class StbcCls

Stbc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:STBC
value: FetchStruct = driver.multiEval.sinfo.hesu.stbc.fetch()
```

Queries the value of STBC field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.18 Tail

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:TAIL
```

class TailCls

Tail commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:TAIL
value: FetchStruct = driver.multiEval.sinfo.hesu.tail.fetch()
```

Queries the value of Tail field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.19 TxBf

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:TXBF
```

class TxBfCls

TxBf commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:TXBF
value: FetchStruct = driver.multiEval.sinfo.hesu.txBf.fetch()
```

Queries the value of TxBF field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.20 TxOp

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:TXOP
```

class TxOpCls

TxOp commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 127

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:TXOP
value: FetchStruct = driver.multiEval.sinfo.hesu.txOp.fetch()
```

Queries the value of TXOP field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.3.21 UlDl

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:ULDL
```

class UlDlCls

UlDl commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HESU:ULDL
value: FetchStruct = driver.multiEval.sinfo.hesu.ulDl.fetch()
```

Queries the value of UL/DL field signaled in HE signal field for single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.4 Hetb

class HetbCls

Hetb commands group definition. 8 total commands, 8 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.hetb.clone()
```

Subgroups

6.2.6.4.1 BssColor

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:BSSColor
```

class BssColorCls

BssColor commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:BSSColor
value: FetchStruct = driver.multiEval.sinfo.hetb.bssColor.fetch()
```

Queries the value of BSS Color field signaled in HE signal field for trigger based uplink single user MIMO (HE-SIG-A) .

return

structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.4.2 Bw

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:BW
```

class BwCls

Bw commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:BW
value: FetchStruct = driver.multiEval.sinfo.hetb.bw.fetch()
```

Queries the value of Bandwidth field signaled in HE signal field for trigger based uplink single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.4.3 Crc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:CRC
```

class CrcCls

Crc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 511
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:CRC
value: FetchStruct = driver.multiEval.sinfo.hetb.crc.fetch()
```

Queries the value of CRC field signaled in HE signal field for trigger based uplink single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.4.4 FormatPy

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:FORMat
```

class FormatPyCls

FormatPy commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:FORMat
value: FetchStruct = driver.multiEval.sinfo.hetb.formatPy.fetch()
```

Queries the value of Format field signaled in HE signal field for trigger based uplink single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.4.5 Reserved<Reserved>

RepCap Settings

```
# Range: Nr1 .. Nr3
rc = driver.multiEval.sinfo.hetb.reserved.repcap_reserved_get()
driver.multiEval.sinfo.hetb.reserved.repcap_reserved_set(repcap.Reserved.Nr1)
```

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:REServed<index>
```

class ReservedCls

Reserved commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: Reserved, default value after init: Reserved.Nr1

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch(*reserved=Reserved.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:REServed<index>
value: FetchStruct = driver.multiEval.sinfo.hetb.reserved.fetch(reserved =␣
↪repcap.Reserved.Default)
```

Queries the value of Reserved field signaled in HE signal field for trigger based uplink single user MIMO (HE-SIG-A) .

param reserved
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Reserved')

return
structure: for return value, see the help for FetchStruct structure arguments.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.hetb.reserved.clone()
```

6.2.6.4.6 SpatialReuse<Spatial>

RepCap Settings

```
# Range: Nr1 .. Nr4
rc = driver.multiEval.sinfo.hetb.spatialReuse.repcap_spatial_get()
driver.multiEval.sinfo.hetb.spatialReuse.repcap_spatial_set(repcap.Spatial.Nr1)
```

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:SPATialreuse<index>
```

class SpatialReuseCls

SpatialReuse commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: Spatial, default value after init: Spatial.Nr1

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 63

fetch(*spatial=Spatial.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:SPATialreuse
↪<index>
value: FetchStruct = driver.multiEval.sinfo.hetb.spatialReuse.fetch(spatial =␣
↪repcap.Spatial.Default)
```

Queries the value of Spatial Reuse field signaled in HE signal field for trigger based uplink single user MIMO (HE-SIG-A) .

param spatial
optional repeated capability selector. Default value: Nr1 (settable in the interface 'SpatialReuse')

return
structure: for return value, see the help for FetchStruct structure arguments.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.hetb.spatialReuse.clone()
```

6.2.6.4.7 Tail

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:TAIL
```

class TailCls

Tail commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 511
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:TAIL
value: FetchStruct = driver.multiEval.sinfo.hetb.tail.fetch()
```

Queries the value of Tail field signaled in HE signal field for trigger based uplink single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.4.8 TxOp

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:TXOP
```

class TxOpCls

TxOp commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 511

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HETB:TXOP
value: FetchStruct = driver.multiEval.sinfo.hetb.txOp.fetch()
```

Queries the value of TXOP field signaled in HE signal field for trigger based uplink single user MIMO (HE-SIG-A) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5 Htsig

class HtsigCls

Htsig commands group definition. 13 total commands, 13 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.htsig.clone()
```

Subgroups

6.2.6.5.1 Aggregation

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:AGGRegation
```

class AggregationCls

Aggregation commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:AGGRegation
value: FetchStruct = driver.multiEval.sinfo.htsig.aggregation.fetch()
```

Queries the value of Aggregation field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.2 Cbw

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:CBW
```

class CbwCls

Cbw commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 65.535E+3

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:CBW
value: FetchStruct = driver.multiEval.sinfo.htsig.cbw.fetch()
```

Queries the value of CBW 20/40 field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.3 Crc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:CRC
```

class CrcCls

Crc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:CRC
value: FetchStruct = driver.multiEval.sinfo.htsig.crc.fetch()
```

Queries the value of CRC field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.4 FecCoding

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:FECCoding
```

class FecCodingCls

FecCoding commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:FECCoding
value: FetchStruct = driver.multiEval.sinfo.htsig.fecCoding.fetch()
```

Queries the value of FEC Coding field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.5 HtLength

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:HTLength
```

class HtLengthCls

HtLength commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 65.535E+3

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:HTLength
value: FetchStruct = driver.multiEval.sinfo.htsig.htLength.fetch()
```

Queries the value of HT Length field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.6 Mcs

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:MCS
```

class McsCls

Mcs commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 65.535E+3

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:MCS
value: FetchStruct = driver.multiEval.sinfo.htsig.mcs.fetch()
```

Queries the value of Modulation and Coding Scheme field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.7 Ness

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:NESS
```

class NessCls

Ness commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:NESS
value: FetchStruct = driver.multiEval.sinfo.htsig.ness.fetch()
```

Queries the value of Number of Extension Spatial Streams field signaled in high throughput signal field for 802. 11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.8 Nsounding

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:NSOunding
```

class NsoundingCls

Nsounding commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:NSOunding
value: FetchStruct = driver.multiEval.sinfo.htsig.nsounding.fetch()
```

Queries the value of Not Sounding field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.9 Reserved

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:REServed
```

class ReservedCls

Reserved commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:REServed
value: FetchStruct = driver.multiEval.sinfo.htsig.reserved.fetch()
```

Queries the value of Reserved field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.10 ShortGi

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:SHORtgi
```

class ShortGiCls

ShortGi commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:SHORtgi
value: FetchStruct = driver.multiEval.sinfo.htsig.shortGi.fetch()
```

Queries the value of Short GI field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.11 Smoothing

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:SMOothing
```

class SmoothingCls

Smoothing commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:SMOothing
value: FetchStruct = driver.multiEval.sinfo.htsig.smoothing.fetch()
```

Queries the value of Smoothing field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.12 StbCoding

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:STBCoding
```

class StbCodingCls

StbCoding commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:STBCoding
value: FetchStruct = driver.multiEval.sinfo.htsig.stbCoding.fetch()
```

Queries the value of STBC field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.5.13 Tail

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:TAIL
```

class TailCls

Tail commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:HTSig:TAIL
value: FetchStruct = driver.multiEval.sinfo.htsig.tail.fetch()
```

Queries the value of Tail Bits field signaled in high throughput signal field for 802.11n signal (HT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.6 Lsig

class LsigCls

Lsig commands group definition. 5 total commands, 5 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.lsig.clone()
```

Subgroups

6.2.6.6.1 Length

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:LSIG:LENGth
```

class LengthCls

Length commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 4095

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:LSIG:LENGth
value: FetchStruct = driver.multiEval.sinfo.lsig.length.fetch()
```

Queries the value of Length field signaled in legacy signal field for NON_HT signal (L-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.6.2 Parity

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:LSIG:PARity
```

class ParityCls

Parity commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 4095
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:LSIG:PARity
value: FetchStruct = driver.multiEval.sinfo.lsig.parity.fetch()
```

Queries the value of Parity field signaled in legacy signal field for NON_HT signal (L-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.6.3 Rate

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:LSIG:RATE
```

class RateCls

Rate commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 4095

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:LSIG:RATE
value: FetchStruct = driver.multiEval.sinfo.lsig.rate.fetch()
```

Queries the value of Rate field signaled in legacy signal field for NON_HT signal (L-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.6.4 Reserved

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:LSIG:REServed
```

class ReservedCls

Reserved commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 4095

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:LSIG:REServed
value: FetchStruct = driver.multiEval.sinfo.lsig.reserved.fetch()
```

Queries the value of Reserved field signaled in legacy signal field for NON_HT signal (L-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.6.5 Tail

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:LSIG:TAIL
```

class TailCls

Tail commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 4095
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:LSIG:TAIL
value: FetchStruct = driver.multiEval.sinfo.lsig.tail.fetch()
```

Queries the value of Tail field signaled in legacy signal field for NON_HT signal (L-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7 VhtSig

class VhtSigCls

VhtSig commands group definition. 15 total commands, 15 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.vhtSig.clone()
```

Subgroups

6.2.6.7.1 Beamformed

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:BEAMformed
```

class BeamformedCls

Beamformed commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:BEAMformed
value: FetchStruct = driver.multiEval.sinfo.vhtSig.beamformed.fetch()
```

Queries the value of Beamformed field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.2 Bw

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:BW
```

class BwCls

Bw commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 511

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:BW
value: FetchStruct = driver.multiEval.sinfo.vhtSig.bw.fetch()
```

Queries the value of BW field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.3 Crc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:CRC
```

class CrcCls

Crc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:CRC
value: FetchStruct = driver.multiEval.sinfo.vhtSig.crc.fetch()
```

Queries the value of CRC field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.4 FecCoding

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:FECCoding
```

class FecCodingCls

FecCoding commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:FECCoding
value: FetchStruct = driver.multiEval.sinfo.vhtSig.fecCoding.fetch()
```

Queries the value of SU/MU[0] Coding field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.5 Gid

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:GID
```

class GidCls

Gid commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 511

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:GID
value: FetchStruct = driver.multiEval.sinfo.vhtSig.gid.fetch()
```

Queries the value of Group ID field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.6 Ldpc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:LDPC
```

class LdpcCls

Ldpc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:LDPC
value: FetchStruct = driver.multiEval.sinfo.vhtSig.ldpc.fetch()
```

Queries the value of LDPC Extra OFDM Symbol field signaled in very high throughput signal field for 802. 11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.7 Paid

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:PAID
```

class PaidCls

Paid commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 511

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:PAID
value: FetchStruct = driver.multiEval.sinfo.vhtSig.paid.fetch()
```

Queries the value of Partial AID field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) . For the filed NSTS refer to: method RsCmwWlanMeas.MultiEval.Sinfo.VhtSig.Sunsts.fetch

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.8 Reserved<Reserved>

RepCap Settings

```
# Range: Nr1 .. Nr3
rc = driver.multiEval.sinfo.vhtSig.reserved.repcap_reserved_get()
driver.multiEval.sinfo.vhtSig.reserved.repcap_reserved_set(repcap.Reserved.Nr1)
```

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:REServed<index>
```

class ReservedCls

Reserved commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: Reserved, default value after init: Reserved.Nr1

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 511

fetch(*reserved=Reserved.Default*) → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:REServed
↪<index>
value: FetchStruct = driver.multiEval.sinfo.vhtSig.reserved.fetch(reserved =␣
↪repcap.Reserved.Default)
```

Queries the value of Reserved field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) .

param reserved
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Reserved')

return
structure: for return value, see the help for FetchStruct structure arguments.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.sinfo.vhtSig.reserved.clone()
```

6.2.6.7.9 Sdisambiguity

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:SDISambig
```

class SdisambiguityCls

Sdisambiguity commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:SDISambig
value: FetchStruct = driver.multiEval.sinfo.vhtSig.sdisambiguity.fetch()
```

Queries the value of 'Short GI NSYM Disambiguation' field signaled in very high throughput signal field for 802. 11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.10 Sgi

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:SGI
```

class SgiCls

Sgi commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:SGI
value: FetchStruct = driver.multiEval.sinfo.vhtSig.sgi.fetch()
```

Queries the value of Short GI field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.11 Smcs

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:SMCS
```

class SmcsCls

Smcs commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:SMCS
value: FetchStruct = driver.multiEval.sinfo.vhtSig.smcs.fetch()
```

Queries the value of SU VHT-MCS/ MU[1- 3] Coding field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.12 Stbc

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:STBC
```

class StbcCls

Stbc commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 511

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:STBC
value: FetchStruct = driver.multiEval.sinfo.vhtSig.stbc.fetch()
```

Queries the value of STBC field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.13 Sunsts

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:SUNSts
```

class SunstsCls

Sunsts commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: float: float 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 511

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:SUNSts
value: FetchStruct = driver.multiEval.sinfo.vhtSig.sunsts.fetch()
```

Queries the value of NSTS field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) . For the filed Partial AID refer to: method RsCmwWlanMeas.MultiEval.Sinfo.VhtSig.Paid.fetch

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.14 Tail

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:TAIL
```

class TailCls

Tail commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string
- Value_Dec: int: decimal Range: 0 to 255
- Check: bool: ON | OFF | 1 | 0 Indicates passed or failed check verdict

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:TAIL
value: FetchStruct = driver.multiEval.sinfo.vhtSig.tail.fetch()
```

Queries the value of Tail field signaled in very high throughput signal field for 802.11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.6.7.15 TxOp

SCPI Command :

```
FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:TXOP
```

class TxOpCls

TxOp commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Value_Bin: str: string

- Value_Dec: int: decimal Range: 0 to 511

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SINFo:VHTSig:TXOP
value: FetchStruct = driver.multiEval.sinfo.vhtSig.txOp.fetch()
```

Queries the value of **TXOP_PS_** NOT_ALLOWED field signaled in very high throughput signal field for 802. 11ac signal (VHT-SIG) .

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.7 SpectrFlatness

class SpectrFlatnessCls

SpectrFlatness commands group definition. 40 total commands, 6 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.spectrFlatness.clone()
```

Subgroups

6.2.7.1 Average

SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:AVERage
FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:AVERage
CALCulate:WLAN:MEASurement<instance>:MEValuation:SFLatness:AVERage
```

class AverageCls

Average commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate() → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<instance>:MEValuation:SFLatness:AVERage
value: List[enums.ResultStatus2] = driver.multiEval.spectrFlatness.average.
↪calculate()
```

Returns the margin values of the spectrum flatness measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

fetch() → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:AVERage
value: List[float] = driver.multiEval.spectrFlatness.average.fetch()
```

Returns the margin values of the spectrum flatness measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

read() → List[float]

```
# SCPI: READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:AVERage
value: List[float] = driver.multiEval.spectrFlatness.average.read()
```

Returns the margin values of the spectrum flatness measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

6.2.7.2 Current

SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:CURRent
FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:CURRent
CALCulate:WLAN:MEASurement<instance>:MEValuation:SFLatness:CURRent
```

class CurrentCls

Current commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate() → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<instance>:MEValuation:SFLatness:CURRent
value: List[enums.ResultStatus2] = driver.multiEval.spectrFlatness.current.
↪calculate()
```

Returns the margin values of the spectrum flatness measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

fetch() → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:CURRent
value: List[float] = driver.multiEval.spectrFlatness.current.fetch()
```

Returns the margin values of the spectrum flatness measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

read() → List[float]

```
# SCPI: READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:CURRent
value: List[float] = driver.multiEval.spectrFlatness.current.read()
```

Returns the margin values of the spectrum flatness measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

6.2.7.3 Maximum

SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:MAXimum
FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:MAXimum
CALCulate:WLAN:MEASurement<instance>:MEValuation:SFLatness:MAXimum
```

class MaximumCls

Maximum commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate() → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<instance>:MEValuation:SFLatness:MAXimum
value: List[enums.ResultStatus2] = driver.multiEval.spectrFlatness.maximum.
↪calculate()
```

Returns the margin values of the spectrum flatness measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. The values described below are returned

by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

fetch() → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:MAXimum
value: List[float] = driver.multiEval.spectrFlatness.maximum.fetch()
```

Returns the margin values of the spectrum flatness measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

read() → List[float]

```
# SCPI: READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:MAXimum
value: List[float] = driver.multiEval.spectrFlatness.maximum.read()
```

Returns the margin values of the spectrum flatness measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

6.2.7.4 Mimo<Mimo>

RepCap Settings

```
# Range: Nr1 .. Nr8
rc = driver.multiEval.spectrFlatness.mimo.repcap_mimo_get()
driver.multiEval.spectrFlatness.mimo.repcap_mimo_set(repcap.Mimo.Nr1)
```

class MimoCls

Mimo commands group definition. 20 total commands, 5 Subgroups, 0 group commands Repeated Capability: Mimo, default value after init: Mimo.Nr1

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.spectrFlatness.mimo.clone()
```

Subgroups

6.2.7.4.1 Average

SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:MIMO<n>:AVERage
FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:MIMO<n>:AVERage
CALCulate:WLAN:MEASurement<instance>:MEValuation:SFLatness:MIMO<n>:AVERage
```

class AverageCls

Average commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate(*mimo=Mimo.Default*) → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<instance>:MEValuation:SFLatness:MIMO<n>
↪:AVERage
value: List[enums.ResultStatus2] = driver.multiEval.spectrFlatness.mimo.average.
↪calculate(mimo = repcap.Mimo.Default)
```

Return the single value margins for true MIMO measurements, antenna/stream number <n>. There are current, average, minimum, and maximum results. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. For the queries of subcarrier indices for spectrum flatness margins, see: method RsCmwWlanMeas.MultiEval.SpectrFlatness.Mimo.X.Current.fetch etc. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
spec_flat_margins_tx: float Up to 10 comma-separated list of margins (one value per subcarrier range from left to right) Value 1: trace margin to the upper spectrum flatness limit For bandwidths 80 MHz, the margin is only relevant for the left 80 MHz segment (segment 1) . Value 2 to 5: for the trace margins to the lower spectrum flatness limit For bandwidths 80 MHz, the margins are only relevant for the left 80 MHz segment (segment 1) . Value 6: trace margin to the upper spectrum flatness limit for the right 80 MHz segment (segment 2) . This margin is only relevant for bandwidths 80 MHz. Value 7 to 10: trace margins to the lower spectrum flatness limit for the right 80 MHz segment (segment 2) . These margins are only relevant for bandwidths 80 MHz. Unit: dB

fetch(*mimo=Mimo.Default*) → List[float]

```

Value 2 to 5: for the trace margins to the lower spectrum flatness limit For bandwidths 80 MHz, the margins are only relevant for the left 80 MHz segment (segment 1) . Value 6: trace margin to the upper spectrum flatness limit for the right

80 MHz segment (segment 2) . This margin is only relevant for bandwidths 80 MHz. Value 7 to 10: trace margins to the lower spectrum flatness limit for the right 80 MHz segment (segment 2) . These margins are only relevant for bandwidths 80 MHz. Unit: dB

6.2.7.4.2 Current

SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:MIMO<n>:CURRent
FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:MIMO<n>:CURRent
CALCulate:WLAN:MEASurement<instance>:MEValuation:SFLatness:MIMO<n>:CURRent
```

class CurrentCls

Current commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate(*mimo=Mimo.Default*) → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<instance>:MEValuation:SFLatness:MIMO<n>
↪:CURRent
value: List[enums.ResultStatus2] = driver.multiEval.spectrFlatness.mimo.current.
↪calculate(mimo = repcap.Mimo.Default)
```

Return the single value margins for true MIMO measurements, antenna/stream number <n>. There are current, average, minimum, and maximum results. A positive margin indicates a violation of the spectrum flatness limit. The respective trace value is located above the upper or below the lower limit line. For the queries of subcarrier indices for spectrum flatness margins, see: method RsCmwWlanMeas.MultiEval.SpectrFlatness.Mimo.X.Current.fetch etc. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
spec_flat_margins_tx: float Up to 10 comma-separated list of margins (one value per subcarrier range from left to right) Value 1: trace margin to the upper spectrum flatness limit For bandwidths 80 MHz, the margin is only relevant for the left 80 MHz segment (segment 1) . SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:AVERage
FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:AVERage
```

class AverageCls

Average commands group definition. 2 total commands, 0 Subgroups, 2 group commands

fetch() → List[int]

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:AVERage
value: List[int] = driver.multiEval.spectrFlatness.x.average.fetch()
```

Return the subcarrier indices for the current, average, minimum and maximum margin values.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

read() → List[int]

```
# SCPI: READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:AVERage
value: List[int] = driver.multiEval.spectrFlatness.x.average.read()
```

Return the subcarrier indices for the current, average, minimum and maximum margin values.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

6.2.7.6.2 Current

SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:CURRent
FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:CURRent
```

class CurrentCls

Current commands group definition. 2 total commands, 0 Subgroups, 2 group commands

fetch() → List[int]

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:CURRent
value: List[int] = driver.multiEval.spectrFlatness.x.current.fetch()
```

Return the subcarrier indices for the current, average, minimum and maximum margin values.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

read() → List[int]

```
# SCPI: READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:CURRent
value: List[int] = driver.multiEval.spectrFlatness.x.current.read()
```

Return the subcarrier indices for the current, average, minimum and maximum margin values.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

6.2.7.6.3 Maximum

SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:MAXimum
FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:MAXimum
```

class MaximumCls

Maximum commands group definition. 2 total commands, 0 Subgroups, 2 group commands

fetch() → List[int]

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:MAXimum
value: List[int] = driver.multiEval.spectrFlatness.x.maximum.fetch()
```

Return the subcarrier indices for the current, average, minimum and maximum margin values.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

read() → List[int]

```
# SCPI: READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:MAXimum
value: List[int] = driver.multiEval.spectrFlatness.x.maximum.read()
```

Return the subcarrier indices for the current, average, minimum and maximum margin values.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

6.2.7.6.4 Minimum

SCPI Commands :

```
READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:MINimum
FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:MINimum
```

class MinimumCls

Minimum commands group definition. 2 total commands, 0 Subgroups, 2 group commands

fetch() → List[int]

```
# SCPI: FETCh:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:MINimum
value: List[int] = driver.multiEval.spectrFlatness.x.minimum.fetch()
```

Return the subcarrier indices for the current, average, minimum and maximum margin values.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

read() → List[int]

```
# SCPI: READ:WLAN:MEASurement<instance>:MEValuation:SFLatness:X:MINimum
value: List[int] = driver.multiEval.spectrFlatness.x.minimum.read()
```

Return the subcarrier indices for the current, average, minimum and maximum margin values.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

return
margins: No help available

6.2.8 State

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:STATe
```

class StateCls

State commands group definition. 2 total commands, 1 Subgroups, 1 group commands

fetch() → ResourceState

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:STATe
value: enums.ResourceState = driver.multiEval.state.fetch()
```

Queries the main measurement state. Without query parameters, the state is returned immediately. With query parameters, the state is returned when the <TargetMainState> and the <TargetSyncState> are reached or when the <Timeout> expires.

return
multi_eval_state: No help available

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.state.clone()
```

Subgroups

6.2.8.1 All

SCPI Command :

```
FETCh:WLAN:MEASurement<Instance>:MEValuation:STATe:ALL
```

class AllCls

All commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class FetchStruct

Response structure. Fields:

- Main_State: enums.ResourceState: OFF | RUN | RDY Current state or target state of ongoing state transition OFF: measurement off RUN: measurement running RDY: measurement completed
- Sync_State: enums.ResourceState: PEND | ADJ PEND: transition to MainState ongoing ADJ: MainState reached
- Res_State: enums.ResourceState: No parameter help available

fetch() → FetchStruct

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:STATe:ALL
value: FetchStruct = driver.multiEval.state.all.fetch()
```

Queries the main measurement state and the measurement substates. Without query parameters, the states are returned immediately. With query parameters, the states are returned when the <TargetMainState> and the <TargetSyncState> are reached or when the <Timeout> expires.

return
structure: for return value, see the help for FetchStruct structure arguments.

6.2.9 Trace

class TraceCls

Trace commands group definition. 360 total commands, 7 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.trace.clone()
```

Subgroups

6.2.9.1 CfError

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:TRACe:CFERror
FETCh:WLAN:MEASurement<Instance>:MEValuation:TRACe:CFERror
```

class CfErrorCls

CfError commands group definition. 2 total commands, 0 Subgroups, 2 group commands

fetch(*start: float = None*, *count: float = None*, *decimation: float = None*) → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:TRACe:CFERror
value: List[float] = driver.multiEval.trace.cfError.fetch(start = 1.0, count =␣
↪1.0, decimation = 1.0)
```

Return carrier frequency offset (CFO) error traces for HE. The number of results corresponds to the statistic count, see method RsCmwWlanMeas.Configure.MultiEval.Scount.modulation.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param start

6.2.9.4.3.21 Minimum

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:TRACe:PVTime:FEDGe:SEGMent<seg>:MINimum
FETCh:WLAN:MEASurement<Instance>:MEValuation:TRACe:PVTime:FEDGe:SEGMent<seg>:MINimum
```

class MinimumCls

Minimum commands group definition. 2 total commands, 0 Subgroups, 2 group commands

fetch(*start: float = None*, *count: float = None*, *decimation: float = None*, *segment=Segment.Default*) → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:TRACe:PVTime:FEDGe:SEGMent
↪<seg>:MINimum
value: List[float] = driver.multiEval.trace.powerVsTime.fallingEdge.segment.
↪minimum.fetch(start = 1.0, count = 1.0, decimation = 1.0, segment = repcap.
↪Segment.Default)
```

Return the values of the power vs time ramp traces (for 80+80 MHz) , rising edge (REDGe) and falling edge (FEDGe) . The results of the current, average, maximum and minimum traces can be retrieved.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param start
numeric For the optional query parameters start, count and decimation, see 'Trace subarrays'.

param count
numeric For the optional query parameters start, count and decimation, see 'Trace subarrays'.

param decimation
numeric For the optional query parameters start, count and decimation, see 'Trace subarrays'.

param segment
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Segment')

return
power_min: No help available

read(*start: float = None*, *count: float = None*, *decimation: float = None*, *segment=Segment.Default*) → List[float]

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:TRACe:PVTime:FEDGe:SEGMent
↪<seg>:MINimum

Return the limit line margin values of the transmit spectrum mask for SISO measurements and bandwidths with one segment. Margins for the current, average, minimum and maximum traces are returned. A positive result indicates that the trace is located above the limit line. The limit is exceeded. The values described

below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:TSMask:AVERage
value: ResultData = driver.multiEval.tsMask.average.read()
```

Return the limit line margin values of the transmit spectrum mask for SISO measurements and bandwidths with one segment. Margins for the current, average, minimum and maximum traces are returned. A positive result indicates that the trace is located above the limit line. The limit is exceeded. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.10.3 Current

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:TSMask:CURRent
FETCh:WLAN:MEASurement<Instance>:MEValuation:TSMask:CURRent
CALCulate:WLAN:MEASurement<Instance>:MEValuation:TSMask:CURRent
```

class CurrentCls

Current commands group definition. 3 total commands, 0 Subgroups, 3 group commands

class CalculateStruct

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Out_Of_Tol: enums.ResultStatus2: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for spectrum emission measurements exceeding the specified transmit spectrum mask limits.
- Margin: List[enums.ResultStatus2]: float Comma-separated list of margin values, one value per spectrum mask area The number of margin values depends on the selected standard, see Table 'Spectrum mask areas'. Range: -100 dB to 100 dB, Unit: dB

class ResultData

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Out_Of_Tol: float: float Out of tolerance result, i.e. percentage of measurement intervals of the statistic count for spectrum emission measurements exceeding the specified transmit spectrum mask limits.
- Margin: List[float]: float Comma-separated list of margin values, one value per spectrum mask area The number of margin values depends on the selected standard, see Table 'Spectrum mask areas'. Range: -100 dB to 100 dB, Unit: dB

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:TSMask:CURRent
value: CalculateStruct = driver.multiEval.tsMask.current.calculate()
```

Return the limit line margin values of the transmit spectrum mask for SISO measurements and bandwidths with one segment. Margins for the current, average, minimum and maximum traces are returned. A positive result indicates that the trace is located above the limit line. The limit is exceeded. The values described below are returned by FETCh and READ commands. calculate(*mimo=Mimo.Default*) → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:TSMask:MIMO<n>
↪:SEGMents:AVERage
value: CalculateStruct = driver.multiEval.tsMask.mimo.segments.average.
↪calculate(mimo = repcap.Mimo.Default)
```

Return the limit line margin values of the transmit spectrum mask for MIMO measurements, antenna <n>, bandwidths with two segments. Margins for the current, average, minimum and maximum traces are returned. A positive result indicates that the trace is located above the limit line. The limit is exceeded. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch(*mimo=Mimo.Default*) → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:TSMask:MIMO<n>
↪:SEGMents:AVERage
value: ResultData = driver.multiEval.tsMask.mimo.segments.average.fetch(mimo =␣
↪repcap.Mimo.Default)
```

Return the limit line margin values of the transmit spectrum mask for MIMO measurements, antenna <n>, bandwidths with two segments. Margins for the current, average, minimum and maximum traces are returned. A positive result indicates that the trace is located above the limit line. The limit is exceeded. The

values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for ResultData structure arguments.

read(*mimo=Mimo.Default*) → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:TSMask:MIMO<n>
↪:SEGMents:AVERage
value: ResultData = driver.multiEval.tsMask.mimo.segments.average.read(mimo =␣
↪repcap.Mimo.Default)
```

Return the limit line margin values of the transmit spectrum mask for MIMO measurements, antenna <n>, bandwidths with two segments. Margins for the current, average, minimum and maximum traces are returned. A positive result indicates that the trace is located above the limit line. The limit is exceeded. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

param mimo

# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:TSMask:MIMO<n>
↪:SEGMents:MAXimum
value: ResultData = driver.multiEval.tsMask.mimo.segments.maximum.read(mimo =␣
↪repcap.Mimo.Default)
```

Return the limit line margin values of the transmit spectrum mask for MIMO measurements, antenna <n>, bandwidths with two segments. Margins for the current, average, minimum and maximum traces are returned. A positive result indicates that the trace is located above the limit line. The limit is exceeded. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for ResultData structure arguments.

6.2.10.7.6.9 Minimum

SCPI Commands :

6.2.10.10 Obw

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBW
FETCh:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBW
```

class ObwCls

Obw commands group definition. 8 total commands, 2 Subgroups, 2 group commands

class ResultData

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Obw_Values: List[float]: No parameter help available
- Obw_Lr: List[float]: No parameter help available

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBW
value: ResultData = driver.multiEval.tsMask.obw.fetch()
```

Return the OBW results for SISO measurements and bandwidths with one segment.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBW
value: ResultData = driver.multiEval.tsMask.obw.read()
```

Return the OBW results for SISO measurements and bandwidths with one segment.

return
structure: for return value, see the help for ResultData structure arguments.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.tsMask.obw.clone()
```

Subgroups

6.2.10.10.1 Mimo<Mimo>

RepCap Settings

```
# Range: Nr1 .. Nr8
rc = driver.multiEval.tsMask.obw.mimo.repcap_mimo_get()
driver.multiEval.tsMask.obw.mimo.repcap_mimo_set(repcap.Mimo.Nr1)
```

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBW:MIMO<n>
FETCh:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBW:MIMO<n>
```

class MimoCls

Mimo commands group definition. 4 total commands, 1 Subgroups, 2 group commands Repeated Capability: Mimo, default value after init: Mimo.Nr1

class ResultData

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Obw_Values_Tx: List[float]: No parameter help available
- Obw_Leri_Tx: List[float]: No parameter help available

fetch(*mimo=Mimo.Default*) → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBW:MIMO<n>
value: ResultData = driver.multiEval.tsMask.obw.mimo.fetch(mimo = repcap.Mimo.
↪Default)
```

Return the OBW results for MIMO measurements, antenna <n>, bandwidths with one segment.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for ResultData structure arguments.

read(*mimo=Mimo.Default*) → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:TSMask:OBW:MIMO<n>
value: ResultData = driver.multiEval.tsMask.obw.mimo.read(mimo = repcap.Mimo.
↪Default)
```

Return the OBW results for MIMO measurements, antenna <n>, bandwidths with one segment.

param mimo
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Mimo')

return
structure: for return value, see the help for ResultData structure arguments.

Cloning the Group

- Margin_Seg_2: List[float]: No parameter help available

calculate() → CalculateStruct

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:TSMask:SEGMents:AVERage
value: CalculateStruct = driver.multiEval.tsMask.segments.average.calculate()
```

Return the limit line margin values of the transmit spectrum mask, for SISO measurements and bandwidths with two segments. Margins for the current, average, minimum and maximum traces are returned. A positive result indicates that the trace is located above the limit line. The limit is exceeded. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for CalculateStruct structure arguments.

fetch() → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:TSMask:SEGMents:AVERage
value: ResultData = driver.multiEval.tsMask.segments.average.fetch()
```

Return the limit line margin values of the transmit spectrum mask, for SISO measurements and bandwidths with two segments. Margins for the current, average, minimum and maximum traces are returned. A positive result indicates that the trace is located above the limit line. The limit is exceeded. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

read() → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:TSMask:SEGMents:AVERage
value: ResultData = driver.multiEval.tsMask.segments.average.read()
```

Return the limit line margin values of the transmit spectrum mask, for SISO measurements and bandwidths with two segments. Margins for the current, average, minimum and maximum traces are returned. A positive result indicates that the trace is located above the limit line. The limit is exceeded. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

return
structure: for return value, see the help for ResultData structure arguments.

6.2.10.12.2 Current

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:TSMask:SEGMents:CURRent
FETCh:WLAN:MEASurement<Instance>:MEValuation:TSMask:SEGMents:CURRent
CALCulate:WLAN:MEASurement<Instance>:MEValuation:TSMask:SEGMents:CURRent
```

class CurrentCls

Current commands group definition. 3 total commands, 0 Subgroups, 3 group commands

class CalculateStruct

6.2.11.1 Average

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:AVERage
FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:AVERage
CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:AVERage
```

class AverageCls

Average commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate(*utError=UtError.Default*) → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:AVERage
value: List[enums.ResultStatus2] = driver.multiEval.utError.average.
↪calculate(utError = repcap.UtError.Default)
```

Return the values of the unused tone error traces according to standard 802.11ax and be. The results of the current, average, minimum and maximum traces can be retrieved. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_yvals: float Comma-separated list of unused tone error results, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

fetch(*utError=UtError.Default*) → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:AVERage
value: List[float] = driver.multiEval.utError.average.fetch(utError = repcap.
↪UtError.Default)
```

Return the values of the unused tone error traces according to standard 802.11ax and be. The results of the current, average, minimum and maximum traces can be retrieved. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_yvals: float Comma-separated list of unused tone error results, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

read(*utError=UtError.Default*) → List[float]

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:AVERage
value: List[float] = driver.multiEval.utError.average.read(utError = repcap.
↪UtError.Default)
```

Return the values of the unused tone error traces according to standard 802.11ax and be. The results of the current, average, minimum and maximum traces can be retrieved. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_yvals: float Comma-separated list of unused tone error results, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

6.2.11.2 Current

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:CURRent
FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:CURRent
CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:CURRent
```

class CurrentCls

Current commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate(*utError=UtError.Default*) → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:CURRent
value: List[enums.ResultStatus2] = driver.multiEval.utError.current.
↪calculate(utError = repcap.UtError.Default)
```

Return the values of the unused tone error traces according to standard 802.11ax and be. The results of the current, average, minimum and maximum traces can be retrieved. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_yvals: float Comma-separated list of unused tone error results, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

fetch(*utError=UtError.Default*) → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:CURRent
value: List[float] = driver.multiEval.utError.current.fetch(utError = repcap.
↪UtError.Default)
```

Return the values of the unused tone error traces according to standard 802.11ax and be. The results of the current, average, minimum and maximum traces can be retrieved. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_yvals: float Comma-separated list of unused tone error results, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

read(*utError=UtError.Default*) → List[float]

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:CURRent
value: List[float] = driver.multiEval.utError.current.read(utError = repcap.
↪UtError.Default)
```

Return the values of the unused tone error traces according to standard 802.11ax and be. The results of the current, average, minimum and maximum traces can be retrieved. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_yvals: float Comma-separated list of unused tone error results, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

6.2.11.3 Limit

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:LIMit
FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:LIMit
CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:LIMit
```

class LimitCls

Limit commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate(*utError=UtError.Default*) → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:LIMit
value: List[enums.ResultStatus2] = driver.multiEval.utError.limit.
↪calculate(utError = repcap.UtError.Default)
```

Displays unused tone error limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_limit_line: float Comma-separated list of unused tone error limits, one value per 26-tone RU (from left to right) Unit: dB

fetch(*utError=UtError.Default*) → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:LIMit
value: List[float] = driver.multiEval.utError.limit.fetch(utError = repcap.
↪UtError.Default)
```

Displays unused tone error limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_limit_line: float Comma-separated list of unused tone error limits, one value per 26-tone RU (from left to right) Unit: dB

read(*utError=UtError.Default*) → List[float]

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:LIMit
value: List[float] = driver.multiEval.utError.limit.read(utError = repcap.
↪UtError.Default)
```

Displays unused tone error limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_limit_line: float Comma-separated list of unused tone error limits, one value per 26-tone RU (from left to right) Unit: dB

6.2.11.4 Margin

class MarginCls

Margin commands group definition. 12 total commands, 4 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.multiEval.utError.margin.clone()
```

Subgroups

6.2.11.4.1 Average

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:AVERage
FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:AVERage
CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:AVERage
```

class AverageCls

Average commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate(*utError=UtError.Default*) → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>
↪:MARGin:AVERage
value: List[enums.ResultStatus2] = driver.multiEval.utError.margin.average.
↪calculate(utError = repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

fetch(*utError=UtError.Default*) → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:AVERage
value: List[float] = driver.multiEval.utError.margin.average.fetch(utError =␣
↪repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

read(*utError=UtError.Default*) → List[float]

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:AVERage
value: List[float] = driver.multiEval.utError.margin.average.read(utError =␣
↪repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

6.2.11.4.2 Current

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:CURRent
FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:CURRent
CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:CURRent
```

class CurrentCls

Current commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate(*utError=UtError.Default*) → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>
↪:MARGin:CURRent
```

(continues on next page)

(continued from previous page)

```
value: List[enums.ResultStatus2] = driver.multiEval.utError.margin.current.
↪calculate(utError = repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

fetch(*utError=UtError.Default*) → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:CURRent
value: List[float] = driver.multiEval.utError.margin.current.fetch(utError =␣
↪repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

read(*utError=UtError.Default*) → List[float]

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:CURRent
value: List[float] = driver.multiEval.utError.margin.current.read(utError =␣
↪repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

6.2.11.4.3 Maximum

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:MAXimum
FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:MAXimum
CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:MAXimum
```

class MaximumCls

Maximum commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate(*utError=UtError.Default*) → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>
↪:MARGin:MAXimum
value: List[enums.ResultStatus2] = driver.multiEval.utError.margin.maximum.
↪calculate(utError = repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

fetch(*utError=UtError.Default*) → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:MAXimum
value: List[float] = driver.multiEval.utError.margin.maximum.fetch(utError =␣
↪repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

read(*utError=UtError.Default*) → List[float]

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:MAXimum
value: List[float] = driver.multiEval.utError.margin.maximum.read(utError =␣
↪repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

6.2.11.4.4 Minimum

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:MINimum
FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:MINimum
CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:MINimum
```

class MinimumCls

Minimum commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate(*utError=UtError.Default*) → List[ResultStatus2]

```
# SCPI: CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>
↪:MARGin:MINimum
value: List[enums.ResultStatus2] = driver.multiEval.utError.margin.minimum.
↪calculate(utError = repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and

READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

fetch(*utError=UtError.Default*) → List[float]

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:MINimum
value: List[float] = driver.multiEval.utError.margin.minimum.fetch(utError =␣
↪repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

read(*utError=UtError.Default*) → List[float]

```
# SCPI: READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MARGin:MINimum
value: List[float] = driver.multiEval.utError.margin.minimum.read(utError =␣
↪repcap.UtError.Default)
```

Returns the margin values of the unused tone error measurement for the current, average, minimum and maximum traces. A positive margin indicates a violation of the unused tone error limit line. The respective trace value is located above the upper limit line. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_margin: float Comma-separated list of margins to the unused tone error limits, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

6.2.11.5 Maximum

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MAXimum
FETCh:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MAXimum
CALCulate:WLAN:MEASurement<Instance>:MEValuation:UTERror<n>:MAXimum
```

class MaximumCls

Maximum commands group definition. 3 total commands, 0 Subgroups, 3 group commands

calculate(*utError=UtError.Default*) → List[ResultStatus2]

```

↪UtError.Default)
```

Return the values of the unused tone error traces according to standard 802.11ax and be. The results of the current, average, minimum and maximum traces can be retrieved. The values described below are returned by FETCh and READ commands. CALCulate commands return limit check results instead, one value for each result listed below.

Use RsCmwWlanMeas.reliability.last_value to read the updated reliability indicator.

param utError
optional repeated capability selector. Default value: Nr1 (settable in the interface 'UtError')

return
ute_yvals: float Comma-separated list of unused tone error results, one value per each 26-tone RU. The total number of RUs depends on the bandwidth, see table below. Unit: dB

6.3 Route

SCPI Commands :

```
ROUTe:WLAN:MEASurement<Instance>:SMIMo
ROUTe:WLAN:MEASurement<Instance>
```

class RouteCls

Route commands group definition. 9 total commands, 2 Subgroups, 2 group commands

class SmimoStruct

Structure for reading output parameters. Fields:

- Gui_Scenario: enums.GuiScenario: No parameter help available
- Controller: str: No parameter help available
- Rx_Connector_1: enums.RxConnector: No parameter help available
- Rx_Converter_1: enums.RxConverter: No parameter help available
- Rx_Connector_2: enums.RxConnector: No parameter help available
- Rx_Converter_2: enums.RxConverter: No parameter help available
- Rx_Connector_3: enums.RxConnector: No parameter help available
- Rx_Converter_3: enums.RxConverter: No parameter help available
- Rx_Connector_4: enums.RxConnector: No parameter help available
- Rx_Converter_4: enums.RxConverter: No parameter help available

class ValueStruct

Structure for reading output parameters. Fields:

- Scenario: enums.MimoScenario: SALone SALone: Standalone (non-signaling)
- Controller: str: string
- Rx_Connector_1: enums.RxConnector: RF connector for the input path
- Rx_Converter_1: enums.RxConverter: RX module for the input path

get_smimo() → SmimoStruct

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SMIMo
value: SmimoStruct = driver.route.get_smimo()
```

No command help available

return
structure: for return value, see the help for SmimoStruct structure arguments.

get_value() → ValueStruct

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>
value: ValueStruct = driver.route.get_value()
```

Returns the configured routing settings for SISO scenarios. For possible connector and converter values, see 'Values for RF path selection'.

return
structure: for return value, see the help for ValueStruct structure arguments.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.route.clone()
```

Subgroups

6.3.1 Catalog

SCPI Command :

```
ROUTe:WLAN:MEASurement<Instance>:CATalog:SCENario
```

class CatalogCls

Catalog commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get_scenario() → List[GuiScenario]

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:CATalog:SCENario
value: List[enums.GuiScenario] = driver.route.catalog.get_scenario()
```

Returns all scenarios possible for the instrument.

return
valid_gui_scenarios: UNDefined | SALone | CSPath | SMI4 | MIMO2x2 | MIMO4x4 | MIMO8x8 | TMIMo | SALone | CSPath | TMIMo SALone: Standalone (non-signaling) CSPath: Combined signal path (with WLAN signaling) TMIMo: True MIMO

6.3.2 Scenario

SCPI Commands :

```
ROUTe:WLAN:MEASurement<Instance>:SCENario:CSPath
ROUTe:WLAN:MEASurement<Instance>:SCENario
```

class ScenarioCls

Scenario commands group definition. 6 total commands, 4 Subgroups, 2 group commands

get_cspath() → str

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario:CSPath
value: str = driver.route.scenario.get_cspath()
```

Activates the combined signal path scenario and selects the controlling application. The selected application controls the signal routing and analyzer settings while the combined signal path scenario is active.

return
master: No help available

get_value() → GuiScenario

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario
value: enums.GuiScenario = driver.route.scenario.get_value()
```

Returns the active scenario.

return
gui_scenario: SALone | TMIMo | CSPath SALone: Standalone (non-signaling) CSPath: Combined signal path (with WLAN signaling) TMIMo: True MIMO

set_cspath(*master: str*) → None

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario:CSPath
driver.route.scenario.set_cspath(master = 'abc')
```

Activates the combined signal path scenario and selects the controlling application. The selected application controls the signal routing and analyzer settings while the combined signal path scenario is active.

param master
string String parameter selecting the controlling application, e.g., 'WLAN Sig1' or 'WLAN Sig2'

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.route.scenario.clone()
```

Subgroups

6.3.2.1 Salone

SCPI Command :

```
ROUTe:WLAN:MEASurement<Instance>:SCENario:SALone
```

class SaloneCls

Salone commands group definition. 1 total commands, 0 Subgroups, 1 group commands

class SaloneStruct

Response structure. Fields:

- Rx_Connector: enums.RxConnector: RF connector for the input path
- Rx_Converter: enums.RxConverter: RX module for the input path

get() → SaloneStruct

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario:SALone
value: SaloneStruct = driver.route.scenario.salone.get()
```

Activates the standalone scenario and selects the RF input path for the measured RF signal. For possible connector and converter values, see 'Values for RF path selection'.

return
structure: for return value, see the help for SaloneStruct structure arguments.

set(*rx_connector: RxConnector*, *rx_converter: RxConverter*) → None

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario:SALone
driver.route.scenario.salone.set(rx_connector = enums.RxConnector.I11I, rx_
↪converter = enums.RxConverter.IRX1)
```

Activates the standalone scenario and selects the RF input path for the measured RF signal. For possible connector and converter values, see 'Values for RF path selection'.

param rx_connector
RF connector for the input path

param rx_converter
RX module for the input path

6.3.2.2 Smi<Smi>

RepCap Settings

```
# Range: Nr4 .. Nr4
rc = driver.route.scenario.smi.repcap_smi_get()
driver.route.scenario.smi.repcap_smi_set(repcap.Smi.Nr4)
```

SCPI Command :

```
ROUTe:WLAN:MEASurement<Instance>:SCENario:SMI<nr>
```

class SmiCls

Smi commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: Smi, default value after init: Smi.Nr4

class SmiStruct

Structure for setting input parameters. Fields:

- Rx_Connector_1: enums.RxConnector: No parameter help available
- Rx_Converter_1: enums.RxConverter: No parameter help available
- Rx_Connector_2: enums.RxConnector: No parameter help available
- Rx_Converter_2: enums.RxConverter: No parameter help available
- Rx_Connector_3: enums.RxConnectorExt: No parameter help available
- Rx_Converter_3: enums.RxTxConverter: No parameter help available
- Rx_Connector_4: enums.RxConnector: No parameter help available
- Rx_Converter_4: enums.RxConverter: No parameter help available

get(*smi=Smi.Default*) → SmiStruct

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario:SMI<nr>
value: SmiStruct = driver.route.scenario.smi.get(smi = repcap.Smi.Default)
```

No command help available

param smi
optional repeated capability selector. Default value: Nr4 (settable in the interface 'Smi')

return
structure: for return value, see the help for SmiStruct structure arguments.

set(*structure: SmiStruct*, *smi=Smi.Default*) → None

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario:SMI<nr>
structure = driver.route.scenario.smi.SmiStruct()
structure.Rx_Connector_1: enums.RxConnector = enums.RxConnector.I11I
structure.Rx_Converter_1: enums.RxConverter = enums.RxConverter.IRX1
structure.Rx_Connector_2: enums.RxConnector = enums.RxConnector.I11I
structure.Rx_Converter_2: enums.RxConverter = enums.RxConverter.IRX1
structure.Rx_Connector_3: enums.RxConnectorExt = enums.RxConnectorExt.I11I
structure.Rx_Converter_3: enums.RxTxConverter = enums.RxTxConverter.IRX1
structure.Rx_Connector_4: enums.RxConnector = enums.RxConnector.I11I
structure.Rx_Converter_4: enums.RxConverter = enums.RxConverter.IRX1
driver.route.scenario.smi.set(structure, smi = repcap.Smi.Default)
```

No command help available

param structure
for set value, see the help for SmiStruct structure arguments.

param smi
optional repeated capability selector. Default value: Nr4 (settable in the interface 'Smi')

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.route.scenario.smi.clone()
```

6.3.2.3 Smimo<SMimoPath>

RepCap Settings

```
# Range: Count2 .. Count8
rc = driver.route.scenario.smimo.repcap_sMimoPath_get()
driver.route.scenario.smimo.repcap_sMimoPath_set(repcap.SMimoPath.Count2)
```

SCPI Command :

```
ROUTe:WLAN:MEASurement<Instance>:SCENario:SMIMo<PathCount>
```

class SmimoCls

Smimo commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: SMimoPath, default value after init: SMimoPath.Count2

class GetStruct

Response structure. Fields:

- Gui_Scenario: enums.GuiScenario: No parameter help available
- Con_Tuple: enums.ConnectorTuple: No parameter help available

get(*sMimoPath=SMimoPath.Default*) → GetStruct

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario:SMIMo<PathCount>
value: GetStruct = driver.route.scenario.smimo.get(sMimoPath = repcap.SMimoPath.
↪Default)
```

No command help available

param sMimoPath
optional repeated capability selector. Default value: Count2 (settable in the interface 'Smimo')

return
structure: for return value, see the help for GetStruct structure arguments.

set(*con_tuple: ConnectorTuple = None*, *sMimoPath=SMimoPath.Default*) → None

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario:SMIMo<PathCount>
driver.route.scenario.smimo.set(con_tuple = enums.ConnectorTuple.CT12,␣
↪sMimoPath = repcap.SMimoPath.Default)
```

No command help available

param con_tuple
No help available

param sMimoPath
optional repeated capability selector. Default value: Count2 (settable in the interface 'Smimo')

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.route.scenario.smimo.clone()
```

6.3.2.4 Tmimo<TrueMimoPath>

RepCap Settings

```
# Range: Count1 .. Count4
rc = driver.route.scenario.tmimo.repcap_trueMimoPath_get()
driver.route.scenario.tmimo.repcap_trueMimoPath_set(repcap.TrueMimoPath.Count1)
```

SCPI Command :

```
ROUTe:WLAN:MEASurement<Instance>:SCENario:TMIMo<PathCount>
```

class TmimoCls

Tmimo commands group definition. 1 total commands, 0 Subgroups, 1 group commands Repeated Capability: TrueMimoPath, default value after init: TrueMimoPath.Count1

get(*trueMimoPath=TrueMimoPath.Default*) → GuiScenario

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario:TMIMo<PathCount>
value: enums.GuiScenario = driver.route.scenario.tmimo.get(trueMimoPath =␣
↪repcap.TrueMimoPath.Default)
```

Selects the number of paths for the true MIMO scenario via <PathCount>. The connectors are configurable via CONFigure:WLAN:MEAS<i>:RFSettings:ANTenna<n>.

param trueMimoPath
optional repeated capability selector. Default value: Count1 (settable in the interface 'Tmimo')

return
gui_scenario: TMIMo Returns the active scenario (true MIMO) .

set(*trueMimoPath=TrueMimoPath.Default*) → None

```
# SCPI: ROUTe:WLAN:MEASurement<Instance>:SCENario:TMIMo<PathCount>
driver.route.scenario.tmimo.set(trueMimoPath = repcap.TrueMimoPath.Default)
```

Selects the number of paths for the true MIMO scenario via <PathCount>. The connectors are configurable via CONFigure:WLAN:MEAS<i>:RFSettings:ANTenna<n>.

param trueMimoPath
optional repeated capability selector. Default value: Count1 (settable in the interface 'Tmimo')

set_with_opc(*trueMimoPath=TrueMimoPath.Default*, *opc_timeout_ms: int = -1*) → None

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.route.scenario.tmimo.clone()
```

6.4 Tmode

SCPI Command :

```
ABORt:WLAN:MEASurement<Instance>:TMODe
```

class TmodeCls

Tmode commands group definition. 5 total commands, 2 Subgroups, 1 group commands

abort(*opc_timeout_ms: int = -1*) → None

```
# SCPI: ABORt:WLAN:MEASurement<Instance>:TMODe
driver.tmode.abort()
```

Aborts the current MIMO training data acquisition.

param opc_timeout_ms
Maximum time to wait in milliseconds, valid only for this call.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.tmode.clone()
```

Subgroups

6.4.1 Antenna<Antenna>

RepCap Settings

```
# Range: Nr1 .. Nr8
rc = driver.tmode.antenna.repcap_antenna_get()
driver.tmode.antenna.repcap_antenna_set(repcap.Antenna.Nr1)
```

SCPI Commands :

```
READ:WLAN:MEASurement<Instance>:TMODe:ANTenna<Antennas>
FETCh:WLAN:MEASurement<Instance>:TMODe:ANTenna<Antennas>
INITiate:WLAN:MEASurement<Instance>:TMODe:ANTenna<Antennas>
```

class AntennaCls

Antenna commands group definition. 3 total commands, 0 Subgroups, 3 group commands Repeated Capability: Antenna, default value after init: Antenna.Nr1

class ResultData

Response structure. Fields:

- Reliability: int: decimal 'Reliability indicator'
- Decode_Status: enums.DecodeStatus: NAV | INV | OK The decode status of the received signal is not available (NAV) until all involved TX antenna signals were recorded. Then it changes to OK if the HT-SIG (high throughput signaling) fields of individual antenna signals are consistent, or to INValid otherwise.
- Mcs: int: decimal Modulation and coding scheme of the recorded antenna signal, obtained from the HT-SIG field
- Power: float: float Absolute power of the measured antenna signal Unit: dBm
- Pilot_Evm: float: float Error vector magnitude of the pilot subcarriers Unit: dB

fetch(*antenna=Antenna.Default*) → ResultData

```
# SCPI: FETCh:WLAN:MEASurement<Instance>:TMODe:ANTenna<Antennas>
value: ResultData = driver.tmode.antenna.fetch(antenna = repcap.Antenna.Default)
```

Return information about the training data acquired on the designated antenna and the decode status of the received signal.

param antenna
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Antenna')

return
structure: for return value, see the help for ResultData structure arguments.

initiate(*antenna=Antenna.Default*, *opc_timeout_ms: int = -1*) → None

```
# SCPI: INITiate:WLAN:MEASurement<Instance>:TMODe:ANTenna<Antennas>
driver.tmode.antenna.initiate(antenna = repcap.Antenna.Default)
```

Starts the training data acquisition for the designated antenna.

param antenna
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Antenna')

param opc_timeout_ms
Maximum time to wait in milliseconds, valid only for this call.

read(*antenna=Antenna.Default*) → ResultData

```
# SCPI: READ:WLAN:MEASurement<Instance>:TMODe:ANTenna<Antennas>
value: ResultData = driver.tmode.antenna.read(antenna = repcap.Antenna.Default)
```

Return information about the training data acquired on the designated antenna and the decode status of the received signal.

param antenna
optional repeated capability selector. Default value: Nr1 (settable in the interface 'Antenna')

return
structure: for return value, see the help for ResultData structure arguments.

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.tmode.antenna.clone()
```

6.4.2 Data

SCPI Command :

```
CLEar:WLAN:MEASurement<instance>:TMODe:DATA
```

class DataCls

Data commands group definition. 1 total commands, 0 Subgroups, 1 group commands

clear() → None

```
# SCPI: CLEar:WLAN:MEASurement<instance>:TMODe:DATA
driver.tmode.data.clear()
```

Clears the current training results and resets the internal data of the training mode.

clear_with_opc(*opc_timeout_ms: int = -1*) → None

```
# SCPI: CLEar:WLAN:MEASurement<instance>:TMODe:DATA
driver.tmode.data.clear_with_opc()
```

Clears the current training results and resets the internal data of the training mode.

Same as clear, but waits for the operation to complete before continuing further. Use the RsCmwWlanMeas.utilities.opc_timeout_set() to set the timeout value.

param opc_timeout_ms
Maximum time to wait in milliseconds, valid only for this call.

6.5 Trigger

class TriggerCls

Trigger commands group definition. 6 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.trigger.clone()
```

Subgroups

6.5.1 MultiEval

SCPI Commands :

```
TRIGger:WLAN:MEASurement<Instance>:MEValuation:SOURce
TRIGger:WLAN:MEASurement<Instance>:MEValuation:MGAP
TRIGger:WLAN:MEASurement<Instance>:MEValuation:THReshold
TRIGger:WLAN:MEASurement<Instance>:MEValuation:SLOPe
TRIGger:WLAN:MEASurement<Instance>:MEValuation:TOUT
```

class MultiEvalCls

MultiEval commands group definition. 6 total commands, 1 Subgroups, 5 group commands

get_mgap() → float

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:MGAP
value: float = driver.trigger.multiEval.get_mgap()
```

Sets a minimum time during which the IF signal must be below the trigger threshold before the trigger is armed so that an IF power trigger event can be generated.

return
min_trig_gap: numeric Range: 5 s to 10 ms, Unit: s

get_slope() → TriggerSlope

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:SLOPe
value: enums.TriggerSlope = driver.trigger.multiEval.get_slope()
```

Qualifies whether the trigger event is generated at the rising or at the falling edge of the trigger pulse (valid for external and power trigger sources) .

return
trig_slope: REDGe | FEDGe REDGe: Rising edge FEDGe: Falling edge

get_source() → str

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:SOURce
value: str = driver.trigger.multiEval.get_source()
```

Selects the source of the trigger events. Some values are always available. They are listed below. Depending on the installed options, additional values are available. You can query a list of all supported values via TRIGger:... :CATalog:SOURce?.

return
trig_source: string 'IF Power': Power trigger (received RF power)

get_threshold() → float

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:THReshold
value: float or bool = driver.trigger.multiEval.get_threshold()
```

Defines the trigger threshold for power trigger sources.

return
trig_threshold: (float or boolean) numeric | ON | OFF Range: -50 dB to 0 dB, Unit: dB (full scale, i.e. relative to reference level minus external attenuation)

get_timeout() → float

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:TOUT
value: float or bool = driver.trigger.multiEval.get_timeout()
```

Selects the maximum time that the measurement waits for a trigger event before it stops in remote control mode or indicates a trigger timeout in manual operation mode.

return
trig_time_out: (float or boolean) numeric | ON | OFF Range: 0.01 s to 300 s, Unit: s Additional values: OFF | ON (disables | enables the timeout)

set_mgap(*min_trig_gap: float*) → None

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:MGAP
driver.trigger.multiEval.set_mgap(min_trig_gap = 1.0)
```

Sets a minimum time during which the IF signal must be below the trigger threshold before the trigger is armed so that an IF power trigger event can be generated.

param min_trig_gap
numeric Range: 5 s to 10 ms, Unit: s

set_slope(*trig_slope: TriggerSlope*) → None

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:SLOPe
driver.trigger.multiEval.set_slope(trig_slope = enums.TriggerSlope.FEDGe)
```

Qualifies whether the trigger event is generated at the rising or at the falling edge of the trigger pulse (valid for external and power trigger sources) .

param trig_slope
REDGe | FEDGe REDGe: Rising edge FEDGe: Falling edge

set_source(*trig_source: str*) → None

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:SOURce
driver.trigger.multiEval.set_source(trig_source = 'abc')
```

Selects the source of the trigger events. Some values are always available. They are listed below. Depending on the installed options, additional values are available. You can query a list of all supported values via TRIGger:... :CATalog:SOURce?.

param trig_source
string 'IF Power': Power trigger (received RF power)

set_threshold(*trig_threshold: float*) → None

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:THReshold
driver.trigger.multiEval.set_threshold(trig_threshold = 1.0)
```

Defines the trigger threshold for power trigger sources.

param trig_threshold
(float or boolean) numeric | ON | OFF Range: -50 dB to 0 dB, Unit: dB (full scale, i.e. relative to reference level minus external attenuation)

set_timeout(*trig_time_out: float*) → None

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:TOUT
driver.trigger.multiEval.set_timeout(trig_time_out = 1.0)
```

Selects the maximum time that the measurement waits for a trigger event before it stops in remote control mode or indicates a trigger timeout in manual operation mode.

param trig_time_out
(float or boolean) numeric | ON | OFF Range: 0.01 s to 300 s, Unit: s Additional values: OFF | ON (disables | enables the timeout)

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.trigger.multiEval.clone()
```

Subgroups

6.5.1.1 Catalog

class CatalogCls

Catalog commands group definition. 1 total commands, 1 Subgroups, 0 group commands

Cloning the Group

```
# Create a clone of the original group, that exists independently
group2 = driver.trigger.multiEval.catalog.clone()
```

Subgroups

6.5.1.1.1 Source

SCPI Command :

```
TRIGger:WLAN:MEASurement<Instance>:MEValuation:CATalog:SOURce
```

class SourceCls

Source commands group definition. 1 total commands, 0 Subgroups, 1 group commands

get(*full_list: bool = None*) → List[str]

```
# SCPI: TRIGger:WLAN:MEASurement<Instance>:MEValuation:CATalog:SOURce
value: List[str] = driver.trigger.multiEval.catalog.source.get(full_list =␣
↪False)
```

Lists all trigger source values that can be set using method RsCmwWlanMeas.Trigger.MultiEval.source.

param full_list
OFF | ON Disables/ enables full list including also invalid trigger sources.

return
trig_source: string Comma-separated list of all supported values. Each value is represented as a string.

CHAPTER

SEVEN

RSCMWWLANMEAS UTILITIES

class Utilities

Common utility class. Utility functions common for all types of drivers.

Access snippet: `utils = RsCmwWlanMeas.utilities`

property logger: *ScpiLogger*

Scpi Logger interface, see *here*

Access snippet: `logger = RsCmwWlanMeas.utilities.logger`

property driver_version: str

Returns the instrument driver version.

property idn_string: str

Returns instrument's identification string - the response on the SCPI command *IDN?

property manufacturer: str

Returns manufacturer of the instrument.

property full_instrument_model_name: str

Returns the current instrument's full name e.g. 'FSW26'.

property instrument_model_name: str

Returns the current instrument's family name e.g. 'FSW'.

property supported_models: List[str]

Returns a list of the instrument models supported by this instrument driver.

property instrument_firmware_version: str

Returns instrument's firmware version.

property instrument_serial_number: str

Returns instrument's serial_number.

query_opc(*timeout: int = 0*) → int

SCPI command: *OPC? Queries the instrument's OPC bit and hence it waits until the instrument reports operation complete. If you define timeout > 0, the VISA timeout is set to that value just for this method call.

property instrument_status_checking: bool

Sets / returns Instrument Status Checking. When True (default is True), all the driver methods and properties are sending "SYSTem:ERRor?" at the end to immediately react on error that might have occurred. We recommend to keep the state checking ON all the time. Switch it OFF only in rare cases when you require maximum speed. The default state after initializing the session is ON.

property encoding: str

Returns string<=>bytes encoding of the session.

property opc_query_after_write: bool

Sets / returns Instrument *OPC? query sending after each command write. When True, (default is False) the driver sends *OPC? every time a write command is performed. Use this if you want to make sure your sequence is performed command-after-command.

property bin_float_numbers_format: BinFloatFormat

Sets / returns format of float numbers when transferred as binary data.

property bin_int_numbers_format: BinIntFormat

Sets / returns format of integer numbers when transferred as binary data.

clear_status() → None

Clears instrument's status system, the session's I/O buffers and the instrument's error queue.

query_all_errors() → List[str]

Queries and clears all the errors from the instrument's error queue. The method returns list of strings as error messages. If no error is detected, the return value is None. The process is: querying 'SYSTem:ERRor?' in a loop until the error queue is empty. If you want to include the error codes, call the query_all_errors_with_codes()

query_all_errors_with_codes() → List[Tuple[int, str]]

Queries and clears all the errors from the instrument's error queue. The method returns list of tuples (code: int, message: str). If no error is detected, the return value is None. The process is: querying 'SYSTem:ERRor?' in a loop until the error queue is empty.

property instrument_options: List[str]

Returns all the instrument options. The options are sorted in the ascending order starting with K-options and continuing with B-options.

reset() → None

SCPI command: *RST Sends *RST command + calls the clear_status().

default_instrument_setup() → None

Custom steps performed at the init and at the reset().

self_test(*timeout: int = None*) → Tuple[int, str]

SCPI command: *TST? Performs instrument's self-test. Returns tuple (code:int, message: str). Code 0 means the self-test passed. You can define the custom timeout in milliseconds. If you do not define it, the default selftest timeout is used (usually 60 secs).

is_connection_active() → bool

Returns true, if the VISA connection is active and the communication with the instrument still works.

reconnect(*force_close: bool = False*) → bool

If the connection is not active, the method tries to reconnect to the device If the connection is active, and force_close is False, the method does nothing. If the connection is active, and force_close is True, the method closes, and opens the session again. Returns True, if the reconnection has been performed.

property resource_name: int

Returns the resource name used in the constructor

property opc_timeout: int

Sets / returns timeout in milliseconds for all the operations that use OPC synchronization.

property visa_timeout: int

Sets / returns visa IO timeout in milliseconds.

property data_chunk_size: int

Sets / returns the maximum size of one block transferred during write/read operations

property visa_manufacturer: int

Returns the manufacturer of the current VISA session.

process_all_commands() → None

SCPI command: *WAI Stops further commands processing until all commands sent before *WAI have been executed.

write_str(*cmd: str*) → None

Writes the command to the instrument.

write(*cmd: str*) → None

This method is an alias to the write_str(). Writes the command to the instrument as string.

write_int(*cmd: str*, *param: int*) → None

Writes the command to the instrument followed by the integer parameter: e.g.: cmd = 'SELECT:INPUT' param = '2', result command = 'SELECT:INPUT 2'

write_int_with_opc(*cmd: str*, *param: int*, *timeout: int = None*) → None

Writes the command with OPC to the instrument followed by the integer parameter: e.g.: cmd = 'SELECT:INPUT' param = '2', result command = 'SELECT:INPUT 2' If you do not provide timeout, the method uses current opc_timeout.

write_float(*cmd: str*, *param: float*) → None

Writes the command to the instrument followed by the boolean parameter: e.g.: cmd = 'CENTER:FREQ' param = '10E6', result command = 'CENTER:FREQ 10E6'

write_float_with_opc(*cmd: str*, *param: float*, *timeout: int = None*) → None

Writes the command with OPC to the instrument followed by the boolean parameter: e.g.: cmd = 'CENTER:FREQ' param = '10E6', result command = 'CENTER:FREQ 10E6' If you do not provide timeout, the method uses current opc_timeout.

write_bool(*cmd: str*, *param: bool*) → None

Writes the command to the instrument followed by the boolean parameter: e.g.: cmd = 'OUTPUT' param = 'True', result command = 'OUTPUT ON'

write_bool_with_opc(*cmd: str*, *param: bool*, *timeout: int = None*) → None

Writes the command with OPC to the instrument followed by the boolean parameter: e.g.: cmd = 'OUTPUT' param = 'True', result command = 'OUTPUT ON' If you do not provide timeout, the method uses current opc_timeout.

query_str(*query: str*) → str

Sends the query to the instrument and returns the response as string. The response is trimmed of any trailing LF characters and has no length limit.

query(*query: str*) → str

This method is an alias to the query_str(). Sends the query to the instrument and returns the response as string. The response is trimmed of any trailing LF characters and has no length limit.

query_bool(*query: str*) → bool

Sends the query to the instrument and returns the response as boolean.

query_int(*query: str*) → int

Sends the query to the instrument and returns the response as integer.

query_float(*query: str*) → float

Sends the query to the instrument and returns the response as float.

write_str_with_opc(*cmd: str*, *timeout: int = None*) → None

Writes the opc-synced command to the instrument. If you do not provide timeout, the method uses current opc_timeout.

write_with_opc(*cmd: str*, *timeout: int = None*) → None

This method is an alias to the write_str_with_opc(). Writes the opc-synced command to the instrument. If you do not provide timeout, the method uses current opc_timeout.

query_str_with_opc(*query: str*, *timeout: int = None*) → str

Sends the opc-synced query to the instrument and returns the response as string. The response is trimmed of any trailing LF characters and has no length limit. If you do not provide timeout, the method uses current opc_timeout.

query_with_opc(*query: str*, *timeout: int = None*) → str

This method is an alias to the query_str_with_opc(). Sends the opc-synced query to the instrument and returns the response as string. The response is trimmed of any trailing LF characters and has no length limit. If you do not provide timeout, the method uses current opc_timeout.

query_bool_with_opc(*query: str*, *timeout: int = None*) → bool

Sends the opc-synced query to the instrument and returns the response as boolean. If you do not provide timeout, the method uses current opc_timeout.

query_int_with_opc(*query: str*, *timeout: int = None*) → int

Sends the opc-synced query to the instrument and returns the response as integer. If you do not provide timeout, the method uses current opc_timeout.

query_float_with_opc(*query: str*, *timeout: int = None*) → float

Sends the opc-synced query to the instrument and returns the response as float. If you do not provide timeout, the method uses current opc_timeout.

write_bin_block(*cmd: str*, *payload: bytes*) → None

Writes all the payload as binary data block to the instrument. The binary data header is added at the beginning of the transmission automatically, do not include it in the payload!!!

query_bin_block(*query: str*) → bytes

Queries binary data block to bytes. Throws an exception if the returned data was not a binary data. Returns data:bytes

query_bin_block_with_opc(*query: str*, *timeout: int = None*) → bytes

Sends a OPC-synced query and returns binary data block to bytes. If you do not provide timeout, the method uses current opc_timeout.

query_bin_or_ascii_float_list(*query: str*) → List[float]

Queries a list of floating-point numbers that can be returned in ASCII format or in binary format. - For ASCII format, the list numbers are decoded as comma-separated values. - For Binary Format, the numbers are decoded based on the property BinFloatFormat, usually float 32-bit (FORM REAL,32).

query_bin_or_ascii_float_list_with_opc(*query: str*, *timeout: int = None*) → List[float]

Sends a OPC-synced query and reads a list of floating-point numbers that can be returned in ASCII format or in binary format. - For ASCII format, the list numbers are decoded as comma-separated values. - For Binary Format, the numbers are decoded based on the property BinFloatFormat, usually float 32-bit (FORM REAL,32). If you do not provide timeout, the method uses current opc_timeout.

query_bin_or_ascii_int_list(*query: str*) → List[int]

Queries a list of floating-point numbers that can be returned in ASCII format or in binary format. - For ASCII format, the list numbers are decoded as comma-separated values. - For Binary Format, the numbers are decoded based on the property BinFloatFormat, usually float 32-bit (FORM REAL,32).

query_bin_or_ascii_int_list_with_opc(*query: str*, *timeout: int = None*) → List[int]

Sends a OPC-synced query and reads a list of floating-point numbers that can be returned in ASCII format or in binary format. - For ASCII format, the list numbers are decoded as comma-separated values. - For Binary Format, the numbers are decoded based on the property BinFloatFormat, usually float 32-bit (FORM REAL,32). If you do not provide timeout, the method uses current opc_timeout.

query_bin_block_to_file(*query: str*, *file_path: str*, *append: bool = False*) → None

Queries binary data block to the provided file. If append is False, any existing file content is discarded. If append is True, the new content is added to the end of the existing file, or if the file does not exit, it is created. Throws an exception if the returned data was not a binary data. Example for transferring a file from Instrument -> PC: query = f'MMEM:DATA? '{INSTR_FILE_PATH}'". Alternatively, use the dedicated methods for this purpose:

- `send_file_from_pc_to_instrument()`
- `read_file_from_instrument_to_pc()`

query_bin_block_to_file_with_opc(*query: str*, *file_path: str*, *append: bool = False*, *timeout: int = None*) → None

Sends a OPC-synced query and writes the returned data to the provided file. If append is False, any existing file content is discarded. If append is True, the new content is added to the end of the existing file, or if the file does not exit, it is created. Throws an exception if the returned data was not a binary data.

write_bin_block_from_file(*cmd: str*, *file_path: str*) → None

Writes data from the file as binary data block to the instrument using the provided command. Example for transferring a file from PC -> Instrument: cmd = f'MMEM:DATA '{INSTR_FILE_PATH}',". Alternatively, use the dedicated methods for this purpose:

- `send_file_from_pc_to_instrument()`
- `read_file_from_instrument_to_pc()`

send_file_from_pc_to_instrument(*source_pc_file: str*, *target_instr_file: str*) → None

SCPI Command: MMEM:DATA

Sends file from PC to the instrument

read_file_from_instrument_to_pc(*source_instr_file: str*, *target_pc_file: str*, *append_to_pc_file: bool = False*) → None

SCPI Command: MMEM:DATA?

Reads file from instrument to the PC.

Set the `append_to_pc_file` to True if you want to append the read content to the end of the existing PC file

get_last_sent_cmd() → str

Returns the last commands sent to the instrument. Only works in simulation mode

go_to_local() → None

Puts the instrument into local state.

go_to_remote() → None

Puts the instrument into remote state.

get_lock() → RLock

Returns the thread lock for the current session.

By default:

- If you create standard new RsCmwWlanMeas instance with new VISA session, the session gets a new thread lock. You can assign it to other RsCmwWlanMeas sessions in order to share one physical instrument with a multi-thread access.
- If you create new RsCmwWlanMeas from an existing session, the thread lock is shared automatically making both instances multi-thread safe.

You can always assign new thread lock by calling `driver.utilities.assign_lock()`

assign_lock(*lock: RLock*) → None

Assigns the provided thread lock.

clear_lock()

Clears the existing thread lock, making the current session thread-independent from others that might share the current thread lock.

sync_from(*source: Utilities*) → None

Synchronises these Utils with the source.

CHAPTER

EIGHT

RSCMWWLANMEAS LOGGER

Check the usage in the Getting Started chapter *here*.

class ScpiLogger

Base class for SCPI logging

mode

Sets the logging ON or OFF. Additionally, you can set the logging ON only for errors. Possible values:

- LoggingMode.Off - logging is switched OFF
- LoggingMode.On - logging is switched ON
- LoggingMode.Errors - logging is switched ON, but only for error entries
- LoggingMode.Default - sets the logging to default - the value you have set with logger.default_mode

default_mode

Sets / returns the default logging mode. You can recall the default mode by calling the logger.mode = LoggingMode.Default.

Data Type
LoggingMode

device_name: str

Use this property to change the resource name in the log from the default Resource Name (e.g. TCPIP::192.168.2.101::INSTR) to another name e.g. 'MySigGen1'.

set_logging_target(*target*, *console_log: bool = None*, *udp_log: bool = None*) → None

Sets logging target - the target must implement write() and flush(). You can optionally set the console and UDP logging ON or OFF. This method switches the logging target global OFF.

get_logging_target()

Based on the global_mode, it returns the logging target: either the local or the global one.

set_logging_target_global(*console_log: bool = None*, *udp_log: bool = None*) → None

Sets logging target to global. The global target must be defined. You can optionally set the console and UDP logging ON or OFF.

log_to_console

Returns logging to console status.

log_to_udp

Returns logging to UDP status.

log_to_console_and_udp

Returns true, if both logging to UDP and console in are True.

info_raw(*log_entry: str*, *add_new_line: bool = True*) → None

Method for logging the raw string without any formatting.

info(*start_time: datetime*, *end_time: datetime*, *log_string_info: str*, *log_string: str*) → None

Method for logging one info entry. For binary log_string, use the info_bin()

error(*start_time: datetime*, *end_time: datetime*, *log_string_info: str*, *log_string: str*) → None

Method for logging one error entry.

set_relative_timestamp(*timestamp: datetime*) → None

If set, the further timestamps will be relative to the entered time.

set_relative_timestamp_now() → None

Sets the relative timestamp to the current time.

get_relative_timestamp() → datetime

Based on the global_mode, it returns the relative timestamp: either the local or the global one.

clear_relative_timestamp() → None

Clears the reference time, and the further logging continues with absolute times.

flush() → None

Flush all the entries.

log_status_check_ok

Sets / returns the current status of status checking OK. If True (default), the log contains logging of the status checking 'Status check: OK'. If False, the 'Status check: OK' is skipped - the log is more compact. Errors will still be logged.

clear_cached_entries() → None

Clears potential cached log entries. Cached log entries are generated when the Logging is ON, but no target has been defined yet.

set_format_string(*value: str*, *line_divider: str = '\n'*) → None

Sets new format string and line divider. If you just want to set the line divider, set the format string value=None The original format string is: `PAD_LEFT12(%START_TIME%) PAD_LEFT25(%DEVICE_NAME%) PAD_LEFT12(%DURATION%) %LOG_STRING_INFO%: %LOG_STRING%`

restore_format_string() → None

Restores the original format string and the line divider to LF

abbreviated_max_len_ascii: int

Defines the maximum length of one ASCII log entry. Default value is 200 characters.

abbreviated_max_len_bin: int

Defines the maximum length of one Binary log entry. Default value is 2048 bytes.

abbreviated_max_len_list: int

Defines the maximum length of one list entry. Default value is 100 elements.

bin_line_block_size: int

Defines number of bytes to display in one line. Default value is 16 bytes.

udp_port

Returns udp logging port.

target_auto_flushing

Returns status of the auto-flushing for the logging target.

CHAPTER

NINE

RSCMWWLANMEAS EVENTS

Check the usage in the Getting Started chapter *here*.

class Events

Common Events class. Event-related methods and properties. Here you can set all the event handlers.

property before_query_handler: Callable

Returns the handler of before_query events.

Returns
current `before_query_handler`

property before_write_handler: Callable

Returns the handler of before_write events.

Returns
current `before_write_handler`

property io_events_include_data: bool

Returns the current state of the io_events_include_data See the setter for more details.

property on_read_handler: Callable

Returns the handler of on_read events.

Returns
current `on_read_handler`

property on_write_handler: Callable

Returns the handler of on_write events.

Returns
current `on_write_handler`

sync_from(*source: Events*) → None

Synchronises these Events with the source.
